Meeting Minutes (MoM)

Collections BRD Addendum Walkthrough – SA & Solution Architecture

Meeting Details - Date: April 27, 2026

Objective

To walkthrough and clarify the Collections BRD Addendum, covering new and enhanced business requirements identified during the March 2026 CCO workshop, and to align on scope, intent, and assumptions prior to solution design.

Discussion Summary per BR ID

- BRD 48–49**
- Configurable escalation rules based on aging commitments and broken payment promises were discussed.
 - Escalation thresholds (e.g., 45/60/120 days)
 - Escalation actions must be auditable and reportable.

- BRD 50**
- Authorized users can manually escalate difficult or exceptional accounts.
 - Supports bulk escalation with full audit trail and workflow routing.
 - Requirement remains capability-based.

- BRD 51**
- Enables bulk updates to manage high-volume follow-ups efficiently.
 - Field validation and before/after audit logging required.
 - No objections raised.

- BRD 52**
- Allows temporary or permanent reassignment of accounts for workload balancing.
 - Reassignment criteria include client, unit, aging, or amount.
 - Full reassignment history and auditability required.

- BRD 53**
- System must monitor installment-based premiums per due date.
 - Overdue installments are flagged independently for follow-up or escalation.
 - Installment schedules are currently maintained manually (Excel/offline).
 - Requirement is capability-based.
 - Integration approach to be finalized during design.

- BRD 54**
- Complete chronological payment history must be visible per account.
 - Includes paid, outstanding balances, and history until amounts are fully zeroed out.
 - Clarified difference from ICS scope (ICS shows outstanding amounts only).
 - Dashboard visibility confirmed.

- BRD 55**
- System compares promised vs actual payment dates per installment.
 - Broken promises are flagged and usable for escalation.
 - Dashboard and reporting views required for users and supervisors.

- BRD 56**
- Consolidated visibility across policy, invoice, and coinsurance levels.
 - Insurer proportion and outstanding amounts per invoice must be visible.
 - Read-only access unless explicitly authorized.

- BRD 57**
- Displays complete financial transaction history per account.
 - Includes payments, financial endorsements, and adjustments only.
 - History retained for audit purposes.

- BRD 58**
- Billing statements are generated based on billing cycle and policy terms.
 - Supports multi-year and installment policies.
 - Billing generation handled by Accounting/Operations.
 - Collections users have visibility only.
 - Sample SOA annex to be provided separately c/o Angel

- BRD 59–60**
- Commission billing cannot proceed unless premium is fully paid/confirmed.
 - Billing statement, invoice date, and policy period are visible for aging.
 - Visibility is read-only for collections; no auto-triggering of commission receivables.

- BRD 61**
- System must distinguish regular commissions from incentives.
 - Regular commissions depend on confirmed premium payment.
 - Incentives treated as other income with separate eligibility rules.
 - Current manual tagging acknowledged; target state is system-driven.

- BRD 62**
- Incentives configured as campaigns with defined eligibility criteria.
 - Marketing owns setup and configuration.
 - Collections has visibility of eligible transactions only.
 - Incentive eligibility and billing are system-generated.

- BRD 63**
- Refunds from negative adjustments are not collectible.
 - Refunds excluded from SOA, CRU dashboard, and aging.
 - Refunds remain traceable to original commission entries.
 - Archiving and retention concerns raised.

- BRD 64**
- In mixed-payment scenarios, only collectible commission is shown.
 - Non-collectible portions (unpaid or externally settled) are excluded.
 - Escalation applies only to confirmed collectible amounts.

Data Retention and Archiving

- To follow existing enterprise retention policies.
- Detailed archiving criteria to be defined during solution design.
 - To have a criteria on identification of active accounts that should not be archived even when due for archiving.

User Access and Roles

- Distinction clarified between Marketing, Operations, and Collections roles.
- Viewing vs action permissions to be documented and aligned with BRDs.

User Access Matrix (Collections access level under Operations BRD)

Process (Target State)	Capabilities (Target State)
Log In to Application	Log In based to a defined profile
Remittance	Search and View Capabilities
Production Reconciliation	Production Register Viewing and Filtering
Collection Of Commission Receivables (Direct Payment)	Automated Incentive Calculation
Collection Of Commission Receivables (Direct Payment)	Motor Maria Incentive Plan Implementation
Collection Of Commission Receivables (Direct Payment)	Production Data Validation and Exclusion Handling
Collection Of Commission Receivables (Direct Payment)	Automated Commission Receivables Processing
Collection Of Commission Receivables (Direct Payment)	Comprehensive Production Reporting
Collection Of Commission Receivables (Direct Payment)	Risk Mitigation and Error Handling
Collection Of Commission Receivables (Direct Payment)	Collection of Commission Receivables (Direct Payment)
Collection Of Commission Receivables (Direct Payment)	Auto-match reversals

- **BRD Addendum Overview and Workshop Outputs:** Zean led the team, including Francis, Wynonah, Angel, and others, through the purpose and scope of the BRD Addendum, which consolidates new and updated business requirements identified during the March 2026 workshop with CCO business units, focusing on strengthening collection capabilities and ensuring alignment with operational and control expectations.
- **Purpose of Addendum:** Zean explained that the BRD Addendum formalizes documents new and updated business requirements from the workshop, supplements the original BRD, and ensures traceability, scope management, and alignment with eSDLC governance guidelines.
- **Workshop Collaborations:** The team discusses the business units at CCO participated in identifying gaps, expanding requirements, and updating expectations or acceptance criteria, with outputs consolidated into the addendum.
- **Scope of Requirements:** The addendum focuses on strengthening collection capabilities, including escalation handling, promise-to-pay management, account allocation and reassignment, installment-based payment monitoring, and payment history visibility.
- **Escalation Handling and Manual Escalation:** Zean, Francis, Angel, and Wynonah discussed requirements for both automated and manual escalation of overdue accounts, including configurable rules, auditability, and workflow integration, with Francis clarifying the relationship to CARMS and Wynonah raising concerns about integration with ICS and installment schedules.
 - **Automated Escalation Rules:** The requirement formalizes standard escalation behavior based on aging commitments and broken promises, with configurable thresholds (e.g., 45/60 days), automatic flagging, and available actions.
 - **Manual Escalation Process:** Authorized users can manually escalate accounts to team leaders or designated authorities, with support for bulk escalation, audit trails, and workflow status transitions, ensuring prompt handling of exceptional cases.
 - **Integration with Existing Systems:** Francis clarified that escalation requirements built on CARMS, while Wynonah raised concerns about installment schedule integration and critical capabilities needed for ICS, prompting Zean to address source system independence and migration/interface considerations.
- **Bulk Updates and Account Reassignment:** Zean described requirements for bulk updates and reassignment of collection accounts, emphasizing efficiency, audit traceability, and support for temporary and permanent reassignment, with input from Wynonah and Francis regarding workload balancing and accountability.
 - **Bulk Update Functionality:** Authorized users can perform bulk updates on multiple invoices or accounts, with validation, audit logging, and traceability of before/after values and affected records.
 - **Account Reassignment Criteria:** Accounts can be reassigned based on defined criteria such as client, unit, aging, or amount, supporting both temporary and permanent reassignment, with full auditability and history visibility.
 - **Workload Balancing:** Team leads are empowered to reassign workloads to balance complexity and aging, ensuring accountability and continuity during staff absences or workload spikes.
- **Installment-Based Payment Monitoring and Broken Promises Detection:** Zean, Wynonah, and Angel discussed requirements for monitoring installment-based insurance premiums, detecting broken payment promises, and ensuring overdue installments are flagged for collection action, with emphasis on visibility, auditability, and dashboard/reporting expectations.
 - **Installment Monitoring:** The system maintains installment schedules per policy/account, monitors each due date independently, and flags overdue installments for follow-up and escalation.
 - **Broken Promise Detection:** Promised versus actual payment dates are compared per installment, with broken promises flagged and reportable for escalation, supporting both dashboard and report visibility.
 - **Manual Data Sources:** Wynonah confirmed that installment schedules are currently logged manually in Excel or offline files, and Zean clarified that the requirement is capability-based, not source system-dependent.
 - **Dashboard and Reporting:** Participants agreed that user dashboards should display broken payment promises and overdue installments, with clear visibility for both supervisors and collection handlers.
- **Payment History, Financial Summaries, and Transaction Visibility:** Zean, Ma, Wynonah, and Angel reviewed requirements for viewing complete payment history, financial summaries, and transaction histories per account, ensuring accurate collection actions and auditability, with clarifications on chronological history, outstanding balances, and differences from ICS scope.
 - **Payment History Visibility:** Historical payments, balances, and outstanding amounts are displayed per account, supporting both installment and non-installment accounts, with chronological history based on payment date.
 - **Outstanding Balance Tracking:** The system produces statements with complete payment history until outstanding premium receivables are zeroed out, reflecting full financial context for collection actions.
 - **Transaction History and Adjustments:** Complete transaction history per account includes payment postings, financial adjustments, and collection actions, with audit retention and support for financial endorsements only.
 - **ICS Scope Clarification:** Wynonah highlighted differences between the BRD and ICS scope, noting that ICS only includes outstanding amounts, while the BRD provides full payment history visibility.
- **Billing Statement Generation and Commission Control:** Zean, Wynonah, Angel, and Francis discussed requirements for generating billing statements based on billing cycles, controlling commission billing, and ensuring commission receivable is only triggered after premium confirmation, with input on user roles, criteria, and integration with marketing collections.
 - **Billing Statement Generation:** The system generates Statements of Account (SOA) per billing cycle, with configurable frequencies, corrected amounts, coverage periods, and support for multi-year and installment policies.
 - **Commission Billing Controls:** Commission billing is controlled and compliant, with SOA blocked unless premium receivable is confirmed as fully paid; billing alone does not trigger commission receivable.
 - **User Role and Access:** Participants clarified that collection users do not generate billing statements; operations and marketing collections handle triggering and criteria, with no new user profiles required for operations or trade.
- **Integration with Marketing Collections:** Marketing collections are responsible for confirming fully paid accounts and triggering commission billing, ensuring no duplicate statements and proper criteria alignment.
 - **Commission and Incentive Management:** Zean, Wynonah, Angel, and Francis reviewed requirements for managing regular commissions and incentives as distinct receivable types, including eligibility rules, campaign-based configuration, and handling of negative adjustments and refunds, with emphasis on system-driven processes and auditability.
 - **Commission vs Incentive Distinction:** The system distinguishes between regular commissions (collectible only after confirmed premium payment) and incentives (treated as other income, generated based on defined eligibility criteria), with traceability at policy, invoice, insurer, and transaction levels.
 - **Campaign-Based Incentive Configuration:** Incentives can be set up as campaigns with configurable criteria (product type, payment timing, payment status, exclusion rules), automatically identifying eligible invoices and generating incentive billing without manual tagging.
 - **Refund Handling for Negative Adjustments:** Refunds resulting from negative premium or commission adjustments are computed by the system, handled separately from collectible commission, and excluded from commission receivable SOA and aging reports.
 - **Partial and Mixed Payment Scenarios:** The system computes and exposes only the commission portion actually collectible by CRU in mixed payment scenarios, ensuring visibility and follow-up only on confirmed, directly paid portions.
 - **User Access and Operations:** Marketing is responsible for incentive configuration, while collection teams have visibility on eligible transactions; operations and marketing collections manage user access and action items for commission and incentive processes.
- **Data Retention and Archiving Requirements:** Glen, Zean, and Pia discussed data retention and archiving requirements for collection data, noting that archiving and purging will follow existing enterprise policies and be addressed during solution design, with criteria for tagging active versus archived records.
 - **Archiving Criteria:** Glen raised the need for archiving and purging requirements, with Zean confirming that criteria for tagging active records and retention periods will be based on enterprise policies and finalized during solution design.

Follow-up tasks:

- **Requirement 53 Communication and Integration:** Confirm with Sir Francis and Mariz whether requirement 53 regarding instalment schedule integration was communicated to the and clarify if a separate system is needed for instalment schedules. (Wynonah, Sir Francis, Mariz)
- **Data Retention and Archiving Criteria:** Define and document the criteria for data retention and archiving for collection data, ensuring alignment with existing enterprise policies and addressing scenarios such as open items and retention periods. (Zean, Glen)
- **Core Addendum Questions and Feedback:** Update the core addendum questions with any outstanding concerns and feedback raised during the walkthrough and provide an update to the team within the day. (Wynonah, Zean)

COLLECTIONS – ADDENDUM (Workshop)

Business Requirements Document (BRD)

Prepared by: Business Project Services (BPS)

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/05/2026	1.0	Addendum first draft to add and/or update requirements as a result of the workshop last March 23-27, 2026	Zean C. Ibay
04/10/2026	1.0	Discussion with BU to finalize BRD Addendum.	Zean C. Ibay

Addendum¹: Business Requirements for Collections

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 23 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

The addendum focuses on strengthening key Collections capabilities, including but not limited to escalation handling, promise-to-pay management, account allocation and reassignment, installment-based payment monitoring, and payment history visibility. These refinements ensure that operational, audit, and control expectations discussed during the workshop are explicitly translated into formal, traceable business requirements.

This document serves as a controlled mechanism to capture scope additions and requirement enhancements without re-issuing the original BRD, in accordance with eSDLC governance guidelines. By consolidating workshop outputs into a structured addendum to ensure continued alignment between business needs, stakeholder expectations, and downstream solution design, development, and implementation activities

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of Collections Requirements

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLXN.049		Collection Team Lead	I must be able to configure escalation rules based on aging, commitments, and broken promises to ensure consistent handling of overdue accounts.	Expected Result: - The system shall apply escalation rules based on aging, commitments, and broken promises to ensure timely follow-up and oversight. - Escalation rules are configurable (e.g., 45/60 days, broken promises). - Accounts meeting criteria are automatically flagged. - Escalation actions are auditable. Acceptance Criteria: - Rules can be configured by days, conditions, and thresholds. - System flags and escalates qualifying accounts. - Escalation actions are logged and reportable.	Must have.
BRCLXN.050		Collection User	As a collection handler, I must be able to manually escalate an account to the team leader (TL) or designated authority, so that difficult or exceptional cases can be addressed promptly and efficiently, beyond automated escalation rules.	Expected Result: - Manual escalation is available as an option for authorized users on qualifying accounts. - Escalated accounts are flagged and routed to the appropriate team leader or authority. - All manual escalation actions are fully auditable and traceable. Acceptance Criteria: - Manual escalation can be initiated for more than one invoice/account at a time. - Escalation history is logged and visible per account. - Only authorized users can perform manual escalation. - Manual escalation triggers appropriate workflow/status transitions and notifications. - Manual escalation is available regardless of automated escalation status.	

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLXN.051		Collection User	I must be able to perform bulk updates so that large follow-up workloads are handled efficiently with audit traceability.	Expected Result: 1. Bulk updates are allowed for authorized users. 2. Multiple updates are completed through a single action. 3. Validation and audit logging are enforced. Acceptance Criteria: 1. Multiple invoices can be selected for bulk update. 2. Required fields are validated per record. 3. Audit log captures before/after values and affected records.	Must have.
BRCLXN.052		Collection Team Lead	I must be able to reassign collection accounts to balance workload without losing accountability.	Expected Result: 1. Accounts can be reassigned based on defined criteria. 2. Accounts can be reassigned with full traceability. 3. Temporary and permanent reassignment is supported. 4. All actions are auditable. Acceptance Criteria: 1. Reassignment criteria (i.e. client, unit, aging, amount) are supported. 2. Temporary vs permanent reassignment is selectable. 3. Reassignment history is logged and visible.	Must have.
BRCLXN.053		Collection User	I must be able to monitor installment-based insurance premiums per due date so that missed or delayed payments are detected and acted upon promptly.	Expected Result: 1. Installment schedules per policy/account are maintained and visible. 2. Each installment due date is monitored independently. 3. Overdue installments are identifiable for collection action. Acceptance Criteria: 1. Installment schedule is viewable per account. 2. System flags overdue installments based on due date.	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Flagged installments are available for follow-up and escalation.	
BRCLXN.054		Collection User	I must be able to view complete payment history and financial summaries so that collection actions are based on accurate and complete information.	Expected Result: 1. Historical payments, balances, and outstanding amounts are displayed. 2. Supports both installment and non-installment accounts. Acceptance Criteria: 1. Chronological payment history is viewable per account. 2. Outstanding balance and paid amounts are clearly displayed.	Must have.
BRCLXN.055		Collection Team Lead	I must be able to detect broken payment promises per installment so that appropriate escalation can be triggered.	Expected Result: 1. Promised vs actual payments are evaluated per installment. 2. Broken promises are identified at installment level. 3. Escalation rules may be triggered. Acceptance Criteria: 1. Promised and actual payment dates are automatically compared. 2. Broken promises are flagged per installment. 3. Flags are reportable and usable for escalation.	Must have.
BRCLXN.056		Collection User	I must be able to view policy, account, invoice, and co-insurance information so that collection actions are based on complete and accurate policy data.	Expected Result: 1. Consolidated policy and billing data is visible. Acceptance Criteria:	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Policy status, booking, delivery, and receipt dates are viewable. 2. Data is accessible at client, account, invoice, and co-insurance levels. 3. Read-only unless authorized	
BRCLXN.057		Collection User	I must be able to view a complete transaction history per account so that prior payments, adjustments, and collection actions are clearly understood.	Expected Result: 1. A chronological transaction history is available. Acceptance Criteria: 1. Payment postings, adjustments, and collection actions are shown. 2. History is retained for audit	Must have.
BRCLXN.058		Collection User	I must be able to generate billing statements based on the billing cycle due of a multi-year policy so that billing and commissions are handled correctly.	Expected Result: 1. Policyholders are billed accurately per billing terms. Acceptance Criteria: 1. Configurable billing frequencies. 2. The system generates a Statement of Account (SOA) per applicable billing cycle due, reflecting the defined needed information (i.e. correct amounts and coverage period). 3. Amounts align to policy period. 4. Supports multi-year and installment policies	Must have.
BRCLXN.059		Collections / Commission User	I must be prevented from triggering commission receivable billing unless Premium Receivable confirms that the premium is fully paid.	Expected Result: 1. Commission billing is controlled and compliant. Acceptance Criteria:	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- CR SOA is blocked without PR confirmation. - Billing alone does not trigger CR. - Partial/adjusted balances remain visible	
BRCLXN.060	Collections	Collection User / Team Lead	I must be able to see billing statements, invoice dates, and policy periods so that aging, monitoring, and escalation are accurate.	Expected Result: - Billing data supports collections monitoring only. Acceptance Criteria: - Invoice references, dates, and amounts are visible. - Data supports aging and escalation. - Billing does not auto-initiate collection or CR.	Must have.
BRCLXN.061		System	The system must support regular commission and incentives as distinct but related receivable types, ensuring each follows its own eligibility rules, billing logic, and accounting treatment.	Expected Result / Acceptance Criteria - The system has the capability to manage both regular commission and incentives, so that commission collection, incentive billing, and reporting are handled consistently and traceably. - The system distinguishes between Regular commission and Incentives (e.g., early remittance / early payment incentives). - Regular commission is driven by final, confirmed premium payment status and is collectible only when the underlying premium is fully paid or formally confirmed. - Incentives are treated as Other Income, not premium or commission and are generated only when defined eligibility criteria are satisfied. - Both commission and incentives are traceable at policy, invoice, insurer, and transaction levels.	Must have

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				6. Negative endorsements or adjustments override original commission or incentive values.	
BRCLXN.062		User	I want incentives to be configured as campaigns with defined criteria, so that the system automatically identifies qualified invoices and generates incentive billing.	Expected Result / Acceptance Criteria - The system must support campaign-based incentive configuration, where incentive eligibility rules are defined once and applied automatically to qualifying policies or invoices. - Incentives can be set up as campaigns, with configurable criteria, including (but not limited to): - Product or policy type - Payment timing (e.g., within X days from booking/inception) - Payment status (fully paid / confirmed) - Exclusion rules (e.g., pending negative adjustments). - The system automatically: - Identifies invoices or policies that qualify for an incentive. - Excludes invoices with unresolved adjustments, cancellations, or partial payments. - Incentive billing: - Is system-generated, not manually computed. - Produces a service invoice reflecting the incentive amount. - Incentive invoices: - Reflect applicable taxes (e.g., withholding tax).	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				b. Are auditable and linked back to the campaign and qualifying criteria. 6. Incentive generation does not require manual tagging once campaign rules are activated.	
BRCLXN.063		User	I want refunds resulting from negative adjustments to be computed by the system and handled separately from collectible commission.	Expected Result / Acceptance Criteria 1. Refunds arising from negative premium or commission adjustments must not be treated as collectible items under CRU responsibility. 2. When a negative endorsement, cancellation, or adjustment occurs: a. The system recalculates the commission based on the final premium position. 3. If the recalculation results in: a. Reduced commission, or b. Commission reversal / refund, such amounts does not form part of the commission receivable SOA. 4. The SOA: a. Reflects only net collectible commission, not refunded or reversed amounts. 5. Refund commission transactions: a. Are traceable to the original commission and adjustment reference. b. Are classified distinctly from open or collectible CR balances.	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				6. CRU dashboards and aging reports exclude refund-related balances.	
BRCLXN.064		User	I want to see only the collectible commission portion based on the directly billed and paid premium, so that CRU does not pursue commission on unpaid or externally settled portions.	Expected Result / Acceptance Criteria - For combination payment scenarios (e.g., customer pays partially to BDOI and partially directly to the insurer), the system must compute and expose only the commission portion that is actually collectible by CRU. - The system supports mixed payment scenarios, including: - Partial payment to BDOI - Partial payment made directly to the insurer. - For directly billed portions: - Commission eligibility is determined only after PR confirmation of payment. - CRU visibility: - Shows collectible commission corresponding only to the directly paid portion. - Excludes commission related to unpaid, partially paid, or unconfirmed premium amounts. - SOA generation: - Includes only commission tied to confirmed, collectible portions. - Does not aggregate or overstate commission across mixed payment sources. - Aging and follow-up:	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				a. Apply only to collectible commission amounts. b. Do not escalate commission linked to unpaid or unconfirmed premium portions.	

COLLECTIONS – ADDENDUM (Workshop)

Business Requirements Document (BRD)

Prepared by: Business Project Services (BPS)

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/05/2026	1.0	Addendum first draft to add and/or update requirements as a result of the workshop last March 23-27, 2026	Zean C. Ibay
04/10/2026	1.0	Discussion with BU to finalize BRD Addendum.	Zean C. Ibay

Addendum¹: Business Requirements for Collections

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 23 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

The addendum focuses on strengthening key Collections capabilities, including but not limited to escalation handling, promise-to-pay management, account allocation and reassignment, installment-based payment monitoring, and payment history visibility. These refinements ensure that operational, audit, and control expectations discussed during the workshop are explicitly translated into formal, traceable business requirements.

This document serves as a controlled mechanism to capture scope additions and requirement enhancements without re-issuing the original BRD, in accordance with eSDLC governance guidelines. By consolidating workshop outputs into a structured addendum to ensure continued alignment between business needs, stakeholder expectations, and downstream solution design, development, and implementation activities

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of New Business Requirements

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLXN.049		Collection Team Lead	I must be able to configure escalation rules based on aging, commitments, and broken promises to ensure consistent handling of overdue accounts.	Expected Result: - The system shall apply escalation rules based on aging, commitments, and broken promises to ensure timely follow-up and oversight. - Escalation rules are configurable (e.g., 45/60 days, broken promises). - Accounts meeting criteria are automatically flagged. - Escalation actions are auditable. Acceptance Criteria: - Rules can be configured by days, conditions, and thresholds. - System flags and escalates qualifying accounts. - Escalation actions are logged and reportable.	Must have.
BRCLXN.050		Collection User	As a collection handler, I must be able to manually escalate an account to the team leader (TL) or designated authority, so that difficult or exceptional cases can be addressed promptly and efficiently, beyond automated escalation rules.	Expected Result: - Manual escalation is available as an option for authorized users on qualifying accounts. - Escalated accounts are flagged and routed to the appropriate team leader or authority. - All manual escalation actions are fully auditable and traceable. Acceptance Criteria: - Manual escalation can be initiated for more than one invoice/account at a time. - Escalation history is logged and visible per account. - Only authorized users can perform manual escalation. - Manual escalation triggers appropriate workflow/status transitions and notifications. - Manual escalation is available regardless of automated escalation status.	

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLXN.051		Collection User	I must be able to perform bulk updates so that large follow-up workloads are handled efficiently with audit traceability.	Expected Result: 1. Bulk updates are allowed for authorized users. 2. Multiple updates are completed through a single action. 3. Validation and audit logging are enforced. Acceptance Criteria: 1. Multiple invoices can be selected for bulk update. 2. Required fields are validated per record. 3. Audit log captures before/after values and affected records.	Must have.
BRCLXN.052		Collection Team Lead	I must be able to reassign collection accounts to balance workload without losing accountability.	Expected Result: 1. Accounts can be reassigned based on defined criteria. 2. Accounts can be reassigned with full traceability. 3. Temporary and permanent reassignment is supported. 4. All actions are auditable. Acceptance Criteria: 1. Reassignment criteria (i.e. client, unit, aging, amount) are supported. 2. Temporary vs permanent reassignment is selectable. 3. Reassignment history is logged and visible.	Must have.
BRCLXN.053		Collection User	I must be able to monitor installment-based insurance premiums per due date so that missed or delayed payments are detected and acted upon promptly.	Expected Result: 1. Installment schedules per policy/account are maintained and visible. 2. Each installment due date is monitored independently. 3. Overdue installments are identifiable for collection action. Acceptance Criteria: 1. Installment schedule is viewable per account. 2. System flags overdue installments based on due date.	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Flagged installments are available for follow-up and escalation.	
BRCLXN.054		Collection User	I must be able to view complete payment history and financial summaries so that collection actions are based on accurate and complete information.	Expected Result: 1. Historical payments, balances, and outstanding amounts are displayed. 2. Supports both installment and non-installment accounts. Acceptance Criteria: 1. Chronological payment history is viewable per account. 2. Outstanding balance and paid amounts are clearly displayed.	Must have.
BRCLXN.055		Collection Team Lead	I must be able to detect broken payment promises per installment so that appropriate escalation can be triggered.	Expected Result: 1. Promised vs actual payments are evaluated per installment. 2. Broken promises are identified at installment level. 3. Escalation rules may be triggered. Acceptance Criteria: 1. Promised and actual payment dates are automatically compared. 2. Broken promises are flagged per installment. 3. Flags are reportable and usable for escalation.	Must have.
BRCLXN.056		Collection User	I must be able to view policy, account, invoice, and co-insurance information so that collection actions are based on complete and accurate policy data.	Expected Result: 1. Consolidated policy and billing data is visible. Acceptance Criteria:	Must have.

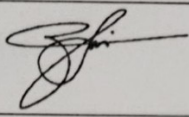

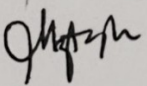

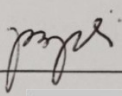

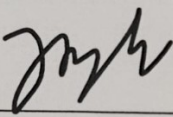

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Policy status, booking, delivery, and receipt dates are viewable. 2. Data is accessible at client, account, invoice, and co-insurance levels. 3. Read-only unless authorized	
BRCLXN.057		Collection User	I must be able to view a complete transaction history per account so that prior payments, adjustments, and collection actions are clearly understood.	Expected Result: 1. A chronological transaction history is available. Acceptance Criteria: 1. Payment postings, adjustments, and collection actions are shown. 2. History is retained for audit	Must have.
BRCLXN.058		Collection User	I must be able to generate billing statements based on the billing cycle due of a multi-year policy so that billing and commissions are handled correctly.	Expected Result: 1. Policyholders are billed accurately per billing terms. Acceptance Criteria: 1. Configurable billing frequencies. 2. The system generates a Statement of Account (SOA) per applicable billing cycle due, reflecting the defined needed information (i.e. correct amounts and coverage period). 3. Amounts align to policy period. 4. Supports multi-year and installment policies	Must have.
BRCLXN.059		Collections / Commission User	I must be prevented from triggering commission receivable billing unless Premium Receivable confirms that the premium is fully paid.	Expected Result: 1. Commission billing is controlled and compliant. Acceptance Criteria:	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. CR SOA is blocked without PR confirmation. 2. Billing alone does not trigger CR. 5. Partial/adjusted balances remain visible	
BRCLXN.060	Collections	Collection User / Team Lead	I must be able to see billing statements, invoice dates, and policy periods so that aging, monitoring, and escalation are accurate.	Expected Result: 1. Billing data supports collections monitoring only. Acceptance Criteria: 1. Invoice references, dates, and amounts are visible. 2. Data supports aging and escalation. 3. Billing does not auto-initiate collection or CR.	Must have.

Approval

This document has been approved as the official Business Requirements Document.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
12/17/2025	1.0	Addendum to update BRD numbers to avoid duplicate numbering with the other BRDs.	Zean C. Ibay

Addendum¹: Claims

Purpose

The addendum introduces a new set of Business Requirement IDs (BRCLXN.001, BRCLXN.002, etc.) to replace or supplement the previous IDs (FRID-001, FRID-002, etc.).

This prevents duplication of requirement numbers across different BRDs, which is critical when multiple documents or projects are being managed in parallel. Unique IDs ensure that each requirement can be referenced unambiguously.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of Business Requirements

5. Business Requirements (FUNCTIONAL)

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.001	FRID-001	Generating a list of accounts	The system should have a module with user interface and database where the user can generate the list of accounts with outstanding premium receivable at the Invoice Number level.
BRCLXN.002	FRID-002	Generating a list of accounts	The system must have access to the necessary data and calculations to determine the outstanding premium receivable for each account.
BRCLXN.003	FRID-003	Checking and adding the PR balance	The system should be able to check and add the PR balance across invoices to determine if there is an outstanding PR.
BRCLXN.004	FRID-004	Checking and adding the PR balance	The system must have access to the necessary invoice data and calculations to determine the PR balance.
BRCLXN.005	FRID-005	Checking and adding the PR balance	The system shall use the minimal balance threshold value to determine which accounts to include in the outstanding premium receivable list.
BRCLXN.006	FRID-006	Data / Reference Management	The system must be able to store the minimal balance threshold.
BRCLXN.007	FRID-007	Data / Reference Management	The system must have a capability to allow authorized users to update and maintain the minimal balance threshold.
BRCLXN.008	FRID-008	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a sum of 0 (zero) or below the minimal balance threshold. Invoices with a sum of 0 or below the minimal balance threshold should not be considered outstanding.
BRCLXN.009	FRID-009	Checking and adding the PR balance	The system must have the functionality to include in the list those invoices with a sum above the minimal balance threshold. Invoices with a sum above the minimal balance threshold should be considered outstanding.

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.010	FRID-010	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a negative balance if they have a transaction type of C (Cancelled). Invoices with a negative balance and transaction type C should not be considered outstanding.
BRCLXN.011	FRID-011	Data Filtering	The system should have a mechanism to filter the generated list of accounts with outstanding premium receivable based on Market Segment and per Unit Head.
BRCLXN.012	FRID-012	Data Filtering	The system shall display only the accounts that belong to the selected Market Segment and Unit head.
BRCLXN.013	FRID-013	Batch Processing	The system should have a daily batch process that extracts all data from EBIX which will run after EOD financial at 10:00PM. EBIX is the source system for the necessary data.
BRCLXN.014	FRID-014	Batch Processing	There should be a daily batch process to upload new records from EBIX to the system. Schedule run: After EOD financial at 10:00PM. The system will receive new records from EBIX.
BRCLXN.015	FRID-015	Batch Processing	There should be a daily batch process to update existing records from the EBIX to the system. Schedule run: After EOD financial at 10:00PM.
BRCLXN.016	FRID-016	Data / Reference Management	The system should be able to store the list of values for Premium Receivable Collector Disposition.
BRCLXN.017	FRID-017	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Premium Receivable Collector Disposition.

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.018	FRID-018	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Premium Receivable Collector Disposition.
BRCLXN.019	FRID-019	Data / Reference Management	The system should have a field showing who performed the encode and update of information.
BRCLXN.020	FRID-020	User Activity Tracking	The system should have a mechanism to capture, store and display the user ID.
BRCLXN.021	FRID-021	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition.
BRCLXN.022	FRID-022	Audit Log Maintenance	The system should have a history of existing records and their disposition. The history should be maintained even if the premium receivable becomes zero or below the minimal balance threshold.
BRCLXN.023	FRID-023	Audit Log Maintenance	The system will maintain the history of records and their disposition regardless of changes in the premium receivable.
BRCLXN.024	FRID-024	Batch Processing	The system should have a monthly batch process to generate file with disposition 'DP PR for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM
BRCLXN.025	FRID-025	User Activity Tracking	The auto-generated DP PR For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.026	FRID-026	Batch Processing	The system should have a monthly batch process to generate file with disposition 'PR 2307 for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM
BRCLXN.027	FRID-027	File Generation	The auto-generated PR 2307 For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month
BRCLXN.028	FRID-028	Batch Processing	The system should have a batch process to auto-generate as of end of Friday weekly reports per unit per branch in excel format. Format: Excel Frequency: Weekly Date Range: Transactions for the week (Saturday-Friday EOD) Schedule Run: Friday - after EOD financial at 10:00PM
BRCLXN.029	FRID-029	File Generation	The system should have the capability to allow authorized user to view the auto-generated as of end of Friday weekly reports per unit per branch in excel format at 08:00am on the following Monday. Schedule Run: After EOD financial at 10:00PM
BRCLXN.030	FRID-030	Unapplied Payment Management	The system should allow the Collector Handler to request application of payment.
BRCLXN.031	FRID-031	Unapplied Payment Management	The system should allow the Collector Handler to document the disposition of the unapplied payment.
BRCLXN.032	FRID-032	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to request application of payment.
BRCLXN.033	FRID-033	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to document the disposition of the unapplied payment.

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.034	FRID-034	Data Filtering	The system should have a user interface and database module for generating the list of unapplied payments using the current system date for generating the list.
BRCLXN.035	FRID-035	Data Filtering	The system should have a mechanism to filter via Market Segment and disposition status the generated list of unapplied payments.

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.036	FRID-036	Data Filtering	The generated list of unapplied payments as of the current system date is filtered according to Market Segment and disposition status showing the required data from the Payments Master List Report , generated by the Automated Payment Processing program showing the following data: Date of Payment (Transaction Date) Payment File Name Transaction Number Paid Amount Payment Type Payor's Name Bank Code Check # Reference Number (from the Payment File) Client Code Match Assured's Name PR Balance Inception Date Market Segment Business Origin Unit Head Account Officer - Should be the name and not userid Insurer - Should be the name and not userid Processing Stage PN Number/Loan Application Number Age (current date – payment date) System Generated Remarks UNIT HEAD - Should be the name and not userid ACCOUNTOFFICER - Should be name and not userid. BANKOFFICER - Should be the name and not the userid. EBIXINVOICE NUMBER - Should be in this format - I00622656 INVOICE CATEGORY - Regular or Direct Bill BOOKER - Should be name of the booker

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.037	FRID-037	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Unapplied Payment Disposition.
BRCLXN.038	FRID-038	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Unapplied Payment Disposition.
BRCLXN.039	FRID-039	Data / Reference Management	The system should be able to store the list of values for Unapplied Payment Disposition.
BRCLXN.040	FRID-040	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition. The history should be maintained even if the payment has already been applied or refunded.
BRCLXN.041	FRID-041	Batch Processing	The system should have a facility to perform a daily batch process that auto-generates a files of those records with disposition "for application to invoice" in text file format containing the required information. Format: Text Frequency: Daily Condition: Records with disposition "for application to invoice" Schedule Run: should be loaded and available to the BDOI file server (FS04) before 6:00 AM the next day.
BRCLXN.042	FRID-042	File Loading	The system should have capability to load to the BDOI file server the auto-generated file of those records with disposition "for application to invoice".
BRCLXN.043	FRID-043	Audit Log Maintenance	The system should have an audit log of all users that initiated changes/updates, indicating the field and the "from" and "to" values, as well as the userID. The system will capture and store the necessary information to track user changes/updates.
BRCLXN.044	FRID-044	Audit Log Extraction	The system should have a mechanism to extract or view the audit log on demand.

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.045	FRID-045	Batch Processing	The system should have a daily batch process to generate the PR Report. Schedule Run: After EOD financial at 10:00PM
BRCLXN.046	FRID-046	Checking and adding the PR balance	The system must be able to show the net outstanding PR and its breakdown. (e.g. Booked premium less negative endorsement / adjustments/cancellations, and payment/s) This is for premiums that are not fully paid / partially paid.
BRCLXN.047	FRID-047	Unapplied Payment Management	The system must have the capability to validate if the invoice number starts with "I" followed by 8 numeric characters when "for application to invoice" is selected as a disposition.
BRCLXN.048	FRID-048	Unapplied Payment Management	The system should not allow submission unless a valid invoice number is provided. The invoice number field must be marked as mandatory when "for application to invoice" is selected.

Approval

This document has been approved as the official Business Requirements Document Collections.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

1. Introduction

1.1 Purpose and Scope of the Document

This document defines the business requirements for **Collection Management System (CMS)**

The Business Requirements Document (BRD) lists the capabilities expected from the solution / service to meet the outcomes of the Business Request (BRQ) approved in the business case. The BRD should be more descriptive than the original BRQ but should not detail how each capability will be built or which system it will be built in unless the detail is critical to the explicitly stated outcome.

This document shall be updated as requirements are further defined and finalized based on discussions, recommendations and feedback from business and technical stakeholders. Unless otherwise stated, all requirements are considered high priority and committed for this phase.

1.2 Intended Audience

INVOLVEMENT	NAME	GROUP
Author	Zean C. Ibay Wynonah Allyssa D. Agojo	OP BPDS IT AIO
Input Provider	John Benedict S. Santos Grace Tordesillas Maria Victoria Evangelista Pia Grace M. Pinili Ma. Fides E. Rivera Perjelyn Joy Gutierrez Arra R. Rivera	BDOI
Output Receiver	BDOI	BDOI
Process Owner	Shellah Marie C. Miranda	BDOI

1.3 Definition of Terms

List down all terms, not limited to Acronyms, used in the document to help the readers understand the content.

Term	Category	Definition
CTE		Credit Term Extension
Marketing Diary		Contains the information on when, where, how and what of the client's instruction on payment or AR settlement.

1.4 References

Include here the Business Request (BRQ) and Business Case, or any other related documents, used in preparing this BRD.

DOCUMENT ID	TITLE	AUTHOR

2. Overview

The Collection Process will provide a user-friendly interface for monitoring and managing outstanding Premium Receivables (PR) and unapplied payments. The system will enable authorized users to generate reports, update records, and track dispositions.

2.1 Business Objectives

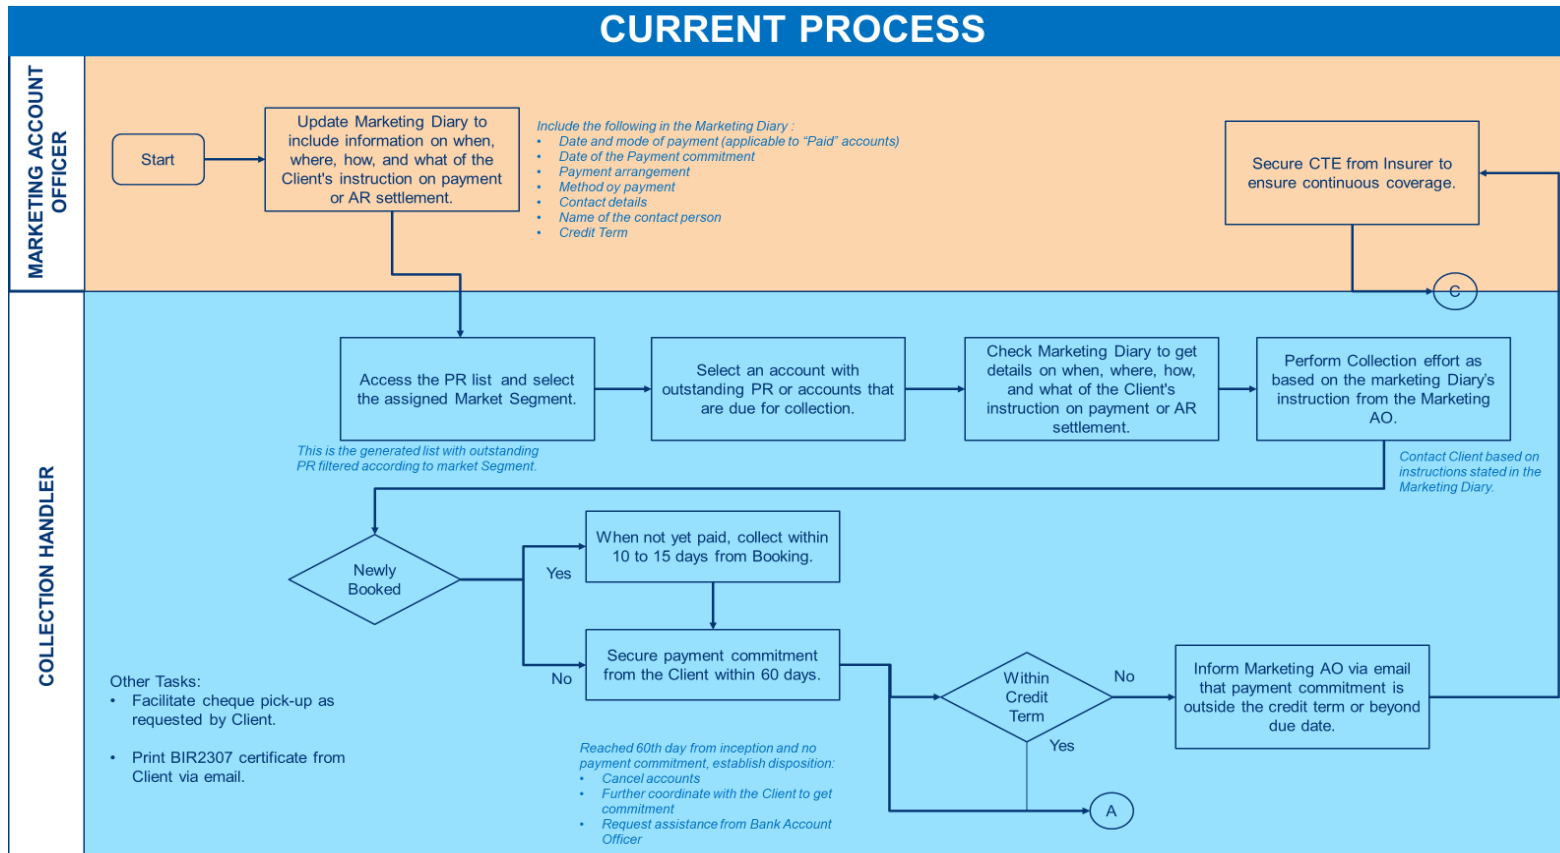

The Collection Process aims to have:

1. Provide a system / module for generating and managing outstanding PR list and unapplied payments collection / disposition.
2. Automate the process of adding / uploading and updating records.
3. Improve data accuracy and reduce manual errors.
4. Enhance user experience through a user-friendly interface.
5. Provide audit logs for tracking user-initiated changes and updates.
6. Automate the generation of daily, weekly, monthly and ad-hoc reports.
7. Ability to filter and sort data by Market Segment and disposition status.

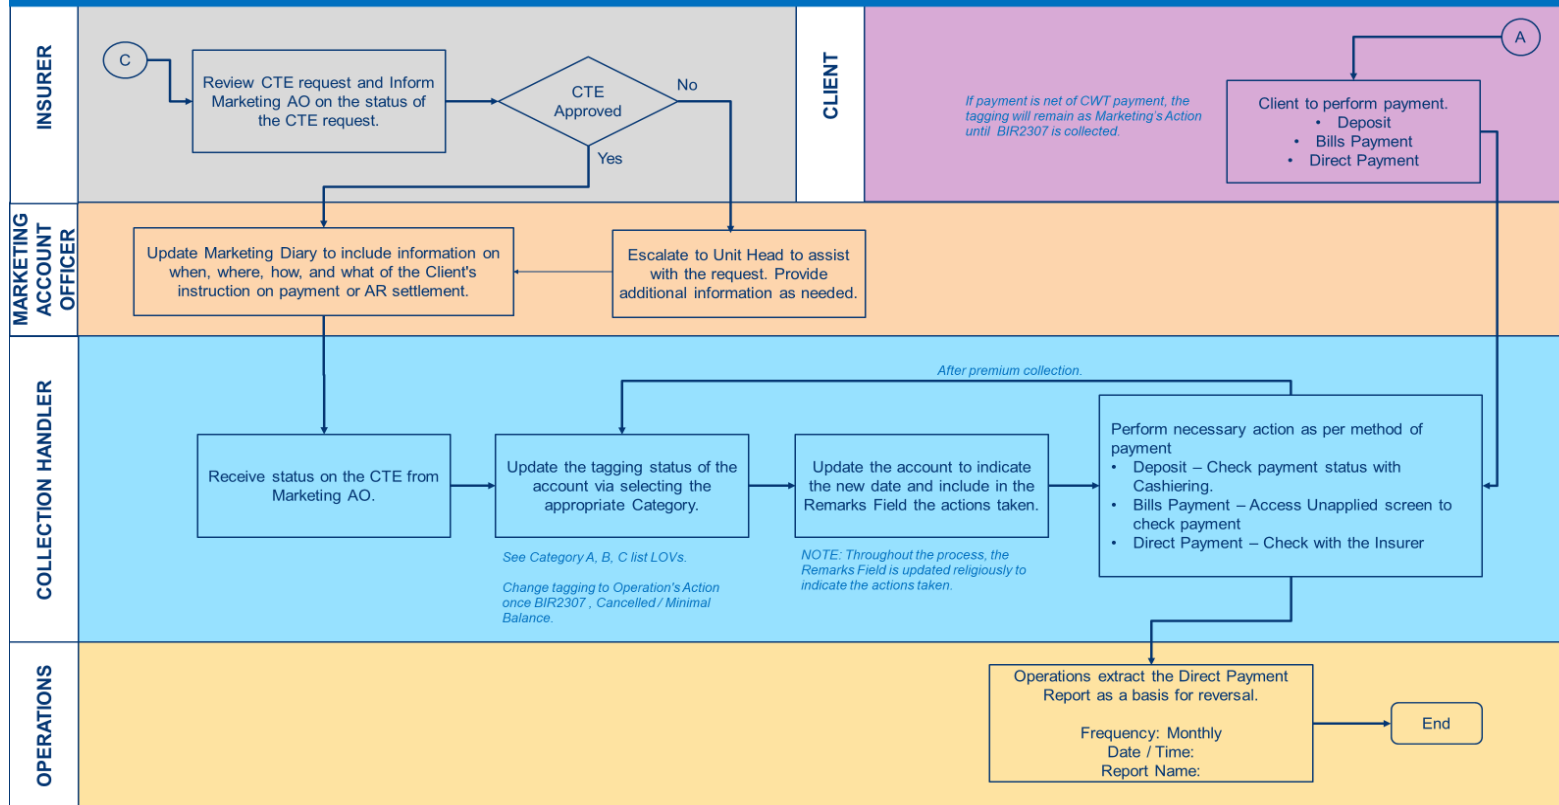

2.2 Assumptions and Limitations

1. EBIX integration is feasible and compatible.
2. Necessary data is available and accessible.
3. User training will be provided.
4. System maintenance will be performed regularly.
5. The file will be in a specific format agreed upon.
6. The report will contain specific information agreed upon with the stakeholders.
7. Authorized users have the necessary permissions.

3. PROCESS DIAGRAM

CURRENT PROCESS

TARGET PROCESS

SYSTEM

PREMIUM RECEIVABLE

Access the generated PR list and select the assigned Market Segment. 1

Select an account with outstanding PR or accounts that are due for collection. 2

Check Web Form for Marketing Diary information. 3

Provide disposition to the premium receivable.. 4

Update the tagging status of the account via selecting the appropriate Category. 12

Update Remarks field of the account to indicate updates and actions taken. 13

Generate the Direct Payment Report as a basis for reversal.

Generate the PR2307 Report as a basis for reversal.

Generate the Outstanding PR List

UNAPPLIED PAYMENT

Access the generated list of unapplied payments filtered by Market Segment and disposition status. 1

Review and provide Unapplied payment disposition based on LOVs. 2

Update Remarks field of the account to indicate updates and actions taken. 3

Access Unapplied Payment list with disposition. 4

Generate a file that goes to the work flow of the Automated Payment System. 5

MANUAL PROCESS

Perform Collection effort as based on the Marketing Diary's instruction. 5

Secure payment commitment from the Client within 60 days. 6

Inform Marketing AO via email that payment commitment is outside the credit term or beyond due date. 7

Secure CTE from Insurer to ensure continuous coverage. 8

Escalate to Unit Head to assist with the request. Provide additional information as needed. 10

Receive status on the CTE from Marketing AO. 11

Perform necessary action as per method of payment. 14

INSURER

Review CTE request and Inform Marketing AO on the status of the CTE request. 9

ISYS

Update Marketing Diary. 9

Group	Unit/Department	User Role	Functions
	Marketing	Marketing Account Officer (AO) Team Lead	1. View your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit disposition transactions. 5. Manage collection effort transactions. 6. View and export unapplied payment lists. 7. Manage collector dispositions. 8. View and export completed collection lists. 9. Generate and export invoices with disposition reports.
		Marketing Handler	1. View your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit disposition transactions. 5. Manage collection effort transactions. 6. View and export unapplied payment lists. 7. Manage collector dispositions. 8. View and export completed collection lists. 9. Generate and export invoices with disposition reports.
		Collection Handler	1. Check your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit transactions. 5. Manage collection efforts. 6. See unapplied payments. 7. Export unapplied payments. 8. Check collector dispositions. 9. See completed collections. 10. Export completed collections. 11. View invoices with disposition reports.

BDO Insure

	Section Head - Corporate	1. View your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit disposition transactions. 5. Manage collection effort transactions. 6. View and export unapplied payment lists. 7. Manage collector dispositions. 8. View and export completed collection lists. 9. Generate and export invoices with disposition reports. 10. Update system settings. 11. Manage collector disposition options. 12. Update minimum threshold values. 13. Set session time out values.
	Section Head - Retail	1. View your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit disposition transactions. 5. Manage collection effort transactions. 6. View and export unapplied payment lists. 7. Manage collector dispositions. 8. View and export completed collection lists. 9. Generate and export invoices with disposition reports.
	Processing Unit	1. Provide disposition on no /missing policy number.
Operations	Cashiering	1. Check your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View and edit transactions. 5. Manage collection efforts. 6. See unapplied payments. 7. Export unapplied payments. 8. Check collector dispositions. 9. See completed collections. 10. Export completed collections. 11. View invoices with disposition reports.

	Comptrollership	Disbursement	1. Check your dashboard. 2. See the disposition list. 3. View collection efforts. 4. See unapplied payments. 5. Check collector dispositions. 6. See completed collections. 7. Export completed collections. 8. View invoices with disposition reports.
		ACSL	1. Check your dashboard. 2. See the disposition list. 3. View collection efforts. 4. See unapplied payments. 5. Check collector dispositions. 6. See completed collections. 7. View invoices with disposition reports.
ITG	Application Management Support	Application Support	1. Check your dashboard. 2. See the disposition list. 3. Export the disposition list. 4. View disposition transactions. 5. View collection efforts. 6. See unapplied payments. 7. Check collector dispositions. 8. See completed collections. 9. Export completed collections. 10. View invoices with disposition reports. 11. Generate invoices reports. 12. Export invoices reports. 13. Update minimum threshold values. 14. Set session time-out values. 15. Manage collector disposition options. 16. View user roles. 17. Add, edit, or deactivate user roles. 18. View user profiles. 19. Add, edit, or deactivate user profiles. 20. Synchronize EBIX/QPS data. 21. View synchronization logs. 22. Check system logs.

	Admin	Admin	1. Check your dashboard. 2. Manage disposition lists and transactions. 3. Manage collection efforts and transactions. 4. View and export unapplied payments. 5. Manage collector dispositions. 6. Manage completed collections. 7. Generate and export invoices reports. 8. Update system settings. 9. Manage user roles and profiles. 10. Synchronize data and view logs.
	DCO	DCO	1. EBIX/QPS Synchronization View. 2. Sync Audit Log. 3. System Logs.

5. Business Requirements (FUNCTIONAL)

FR ID	Activity	Capability/ Requirement	RQ ID	Additional Remarks	Phase / Release	Mandatory?	High Risk?
FRID-001	Generating a list of accounts	The system should have a module with user interface and database where the user can generate the list of accounts with outstanding premium receivable at the Cover Number level.	RQID-001				
FRID-002	Generating a list of accounts	The system must have access to the necessary data and calculations to determine the outstanding premium receivable for each account.	RQID-002				
FRID-003	Checking and adding the PR balance	The system should be able to check and add the PR balance across invoices to determine if there is an outstanding PR.	RQID-003				
FRID-004	Checking and adding the PR balance	The system must have access to the necessary invoice data and calculations to determine the PR balance.	RQID-004				
FRID-005	Checking and adding the PR balance	The system shall use the minimal balance threshold value to determine which accounts to include in the outstanding premium receivable list.	RQID-005				
FRID-006	Data / Reference Management	The system must be able to store the minimal balance threshold.	RQID-005				
FRID-007	Data / Reference Management	The system must have a capability to allow authorized users to update and maintain the minimal balance threshold.	RQID-005				
FRID-008	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a sum of 0 (zero) or below the minimal balance threshold. Invoices with a sum of 0 or below the minimal balance threshold should not be considered outstanding.	RQID-006				
FRID-009	Checking and adding the PR balance	The system must have the functionality to include in the list those invoices with a sum above the minimal balance threshold. Invoices with a sum above the minimal balance threshold should be considered outstanding.	RQID-007				
FRID-010	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a negative balance if they have a transaction type of C (Cancelled). Invoices with a negative balance and transaction type C should not be considered outstanding.	RQID-008				
FRID-011	Data Filtering	The system should have a mechanism to filter the generated list of accounts with outstanding premium receivable based on Market Segment and per Unit Head.	RQID-009				
FRID-012	Data Filtering	The system shall display only the accounts that belong to the selected Market Segment and Unit head.	RQID-009				
FRID-013	Batch Processing	The system should have a daily batch process that extracts all data from EBIX which will run after EOD financial at 10:00PM. EBIX is the source system for the necessary data.	RQID-010				
FRID-014	Batch Processing	There should be a daily batch process to upload new records from EBIX to the system. Schedule run: After EOD financial at 10:00PM. The system will receive new records from EBIX.	RQID-011				
FRID-015	Batch Processing	There should be a daily batch process to update existing records from the EBIX to the system. Schedule run: After EOD financial at 10:00PM.	RQID-012				
FRID-016	Data / Reference Management	The system should be able to store the list of values for Premium Receivable Collector Disposition.	RQID-013				
FRID-017	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Premium Receivable Collector Disposition.	RQID-014				

FRID-018	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Premium Receivable Collector Disposition.	RQID-014				
FRID-019	Data / Reference Management	The system should have a field showing who performed the encode and update of information.	RQID-015				
FRID-020	User Activity Tracking	The system should have a mechanism to capture, store and display the user ID.	RQID-016				
FRID-021	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition.	RQID-017				
FRID-022	Audit Log Maintenance	The system should have a history of existing records and their disposition. The history should be maintained even if the premium receivable becomes zero or below the minimal balance threshold.	RQID-018				
FRID-023	Audit Log Maintenance	The system will maintain the history of records and their disposition regardless of changes in the premium receivable.	RQID-019				
FRID-024	Batch Processing	The system should have a monthly batch process to generate file with disposition 'DP PR for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM	RQID-020				
FRID-025	User Activity Tracking	The auto-generated DP PR For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month	RQID-021				
FRID-026	Batch Processing	The system should have a monthly batch process to generate file with disposition 'PR 2307 for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM	RQID-022				
FRID-027	File Generation	The auto-generated PR 2307 For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month	RQID-023				
FRID-028	Batch Processing	The system should have a batch process to auto-generate as of end of Friday weekly reports per unit per branch in excel format. Format: Excel Frequency: Weekly Date Range: Transactions for the week (Saturday-Friday EOD) Schedule Run: Friday - after EOD financial at 10:00PM	RQID-024				
FRID-029	File Generation	The system should have the capability to allow authorized user to view the auto-generated as of end of Friday weekly reports per unit per branch in excel format at 08:00am on the following Monday. Schedule Run: After EOD financial at 10:00PM	RQID-025				
FRID-030	Unapplied Payment Management	The system should allow the Collector Handler to request application of payment.	RQID-026				
FRID-031	Unapplied Payment Management	The system should allow the Collector Handler to document the disposition of the unapplied payment.	RQID-027				
FRID-032	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to request application of payment.	RQID-026				
FRID-033	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to document the disposition of the unapplied payment.	RQID-027				
FRID-034	Data Filtering	The system should have a user interface and database module for generating the list of unapplied payments using the current system date for generating the list.	RQID-028				
FRID-035	Data Filtering	The system should have a mechanism to filter via Market Segment and disposition status the generated list of unapplied payments.	RQID-028				

FRID-036	Data Filtering	The generated list of unapplied payments as of the current system date is filtered according to Market Segment and disposition status showing the required data from the Payments Master List Report , generated by the Automated Payment Processing program showing the following data: Date of Payment (Transaction Date) Payment File Name Transaction Number Paid Amount Payment Type Payor's Name Bank Code Check # Reference Number (from the Payment File) Client Code Match Assured's Name PR Balance Inception Date Market Segment Business Origin Unit Head Account Officer - Should be the name and not userid Insurer - Should be the name and not userid Processing Stage PN Number/Loan Application Number Age (current date – payment date) System Generated Remarks UNIT HEAD should be the name and not userid ACCOUNTOFFICER should be name and not userid. BANKOFFICER should be the name and not the userid. EBIXINVOICE NUMBER should be in this format- I00622656 INVOICE CATEGORY should be Regular or Direct Bill	RQID-029				
FRID-037	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Unapplied Payment Disposition.	RQID-030				
FRID-038	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Unapplied Payment Disposition.	RQID-030				
FRID-039	Data / Reference Management	The system should be able to store the list of values for Unapplied Payment Disposition.	RQID-031				
FRID-040	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition. The history should be maintained even if the payment has already been applied or refunded.	RQID-033				
FRID-041	Batch Processing	The system should have a facility to perform a daily batch process that auto-generates a files of those records with disposition "for application to invoice" in text file format containing the required information. Format: Text Frequency: Daily Condition: Records with disposition "for application to invoice" Schedule Run: should be loaded and available to the BDOI file server (FS04) before 6:00 AM the next day.	RQID-034				
FRID-042	File Loading	The system should have capability to load to the BDOI file server the auto-generated file of those records with disposition "for application to invoice".	RQID-035				
FRID-043	Audit Log Maintenance	The system should have an audit log of all users that initiated changes/updates, indicating the field and the "from" and "to" values, as well as the userID. The system will capture and store the necessary information to track user changes/updates.	RQID-036				
FRID-044	Audit Log Extraction	The system should have a mechanism to extract or view the audit log on demand.	RQID-037				

	FRID-045	Batch Processing	The system should have a daily batch process to generate the PR Report. Schedule Run: After EOD financial at 10:00PM					
	FRID-046	Checking and adding the PR balance	The system must be able to show the net outstanding PR and its breakdown. (e.g. Booked premium less negative endorsement / adjustments/cancellations, and payment/s) This is for premiums that are not fully paid / partially paid.					
	FRID-047	Unapplied Payment Management	The system must have the capability to validate if the invoice number starts with "I" followed by 8 numeric characters when "for application to invoice" is selected as a disposition.					
	FRID-048	Unapplied Payment Management	The system should not allow submission unless a valid invoice number is provided. The invoice number field must be marked as mandatory when "for application to invoice" is selected.					

6. Business Requirements (NON-FUNCTIONAL)

1) List all the non-functional requirements needed by the project including but not limited to security, system performance and resiliency.

2) The following Non-Functional Requirements are samples. Please replace them and add to them as applicable to your project.

NFR ID	Requirement	Additional Remarks
1	User Authentication Requirements	
1.01	As a user, I should be able to open the application using my windows credentials in the application login page so that I could use only one credentials for all the application I am using.	System should be able to use SSO. - password should be encrypted and is not visible in inspect tool - only users granted access to the system and has a setup user profile could access the system Logon credentials: - user id -- employee id - password -- windows password
1.02	As a user, I should be able to see my password masked unless I select to unmask it as it is being entered to the system to prevent exposure of the password	
1.03	As a user, I should be able to see my log on error messages to be user friendly and not code based error messages so that I would understand the error prompts.	Error Prompt: - Invalid User Name or Password - User does not exist
1.04	The system should be able to log all valid and invalid attempts to access the application. Only the System Administrator should be able to see the logs for user access attempts.	User ID Maintenance: - Should be able to log all valid and even invalid attempts. - Users should be locked out to the system after 3 invalid attempts
2	Password Requirements	System should use SSO and follow existing BDO compliance password requirements
2.01	Password is validated without exposing the clear text value of the stored password (e.g. hash / masking)	
2.02	The system should lock out or disable access of user after three (3) invalid password attempts	
2.03	The system should support mandatory password change at least once every 90 days as per LDAP compliance.	
2.04	Minimum password length is eight characters (8). For system accounts with administrator privileges, minimum password length is twelve (12) characters.	
2.05	Composition of complex passwords is supported by requiring creation of passwords consisting of: - Combination of alphabetic, numeric, and special characters - Combination of upper case and lower case alphabetic characters	
2.06	Re-use or recycling of previous/last eight (8) passwords is prevented	
2.07	The application supports a minimum password age of one (1) day to prevent users from cycling through previous passwords until the next day.	
2.08	Password reset facilities (e.g. forgot password links) should verify the identity of the user initiating the request through out-of-band validation.	
2.09	Input data in the UserID and Password fields should be evaluated for the following factors: a) Length of data is ten (10) characters b) Only accept permitted characters	

2.10	The system should be capable of adapting to changes in specific values of password parameters (e.g. 90 for expiration, 3 for logout, 8 for password length, etc) in response to changes in the level of security threats.	
3	Access Control Requirements	
3.01	The system should be able to provide maintenance function for user administration, which supports user creation, update, deactivation and account locking/unlocking.	
3.02	The system should support role based access control.	
3.03	The system should be able to support creation of custom roles or support granular level of access	
3.04	The system should not allow users to have multiple roles.	
3.05	The system should protect against URL parameter manipulation that can bypass authorization by preventing exposure of direct object references.	
4	Audit Logging Requirements	
4.01	The system audit logs record successful and rejected system access attempts (i.e. login, logout), privileged system usage, as well as account changes such as creation, deactivation, and assignment of user roles.	
4.02	The system audit logs record successful admin maintenance actions (e.g. userID creation/deactivation, elevated access of userID).	
4.03	The system audit logs record the following admin and user activities: Application Maintenance and Backend Activities - Application startup and shutdown. - Application failures. - Application configuration changes. - Accessing of audit logs - Pausing, clearing, or deleting audit logs, as applicable Application Usage, such as, - Access and updates of customer records, whether customer-initiated, or done through back office facilities. - Financial transactions initiated within the application, as applicable. - Device enrollment or unenrollment, as applicable.	At the minimum, audit logs should log the following information: - Event timestamp. - User account/s involved in the event. - Source (workstation, device, or IP address) of the event. For systems situated behind a load balancer or anti-DDoS solutions, the original source IP should be logged. - Resources accessed, if any (e.g. URL, file path, etc.).
4.04	Application software logs such as Tomcat or IIS does not log sensitive information such as credentials, and session tokens, and other data defined under local privacy laws or relevant security policies.	
4.05	Audit logs should be exportable, or made available for sending to remote log monitoring systems as needed.	
5	Input Data Checking and Validation Requirements	
5.01	Input data is validated and sanitized (e.g. within length boundaries, contains permitted characters, correct syntax, etc) to protect against code injection attacks which include, but not limited to - sql injection, cross-site scripting, buffer, heap, or integer overflow, and denial-of service.	
6	Database Authentication Requirements	
6.01	The database management system has standard security features that include, but not limited to, authentication, access control and audit logging.	
6.02	Access to the database is only allowed after proper authentication.	
6.03	Credentials are not hard-coded within the application binaries or programs, but are set in a server configuration file or repository that can be made accessible only to authorized users, or encrypted when stored in client machines.	
6.04	Least privilege access level or only the needed privilege is granted when accessing the database.	
6.05	Low level database functions such as xp_cmdshell and extproc, that enable access to execute commands in the operating system, are not used by the system	
7	Application Encryption Requirements	
7.01	The system should make use of available security protocols (e.g. HTTPS, SFTP/FTPS, SSH etc.) to protect sensitive data during transmission over networks.	
8	Application Configuration and Library Dependency Requirements	
8.01	The system should ensure proper error handling preventing disclosure of sensitive information such as stack traces, failed SQL statements, underlying web server platform and other debugging information.	

8.02	Source code control system is in use, with procedures to ensure that check-ins are accompanied by issues or change tickets. The source code control system should have access control and identifiable users to allow traceability of any changes. Proper versioning for any system changes should be implemented.	
8.03	The system should NOT use unsupported, insecure, or deprecated client-side technologies, container images, and/or libraries.	
8.04	Third party components come from pre-defined, trusted and continually maintained repositories.	
8.05	Inventory catalog is maintained of all third party libraries in use. Version and support information is also maintained to track when a library becomes outdated	
8.06	Least privilege access level or only the needed privilege is granted when accessing the database.	
8.07	New Application database and library must complement the existing integrating applications for ease of integration and accessibility.	
9	User Interface and Experience Requirements	
9.01	The system user interface must follow existing BDOI Application UI to have a uniform experience for all BDO Insure applications	
9.02	For internal systems, concurrent open sessions should be allowed and will follow session management requirements.	
9.03	Allow locking of a transaction when one user is actively editing the said transaction. An error prompt to the new user will indicate that "Username" is editing the transaction.	
9.04	User should be able to copy/paste from their local computer to the Application in all fields that are applicable	
9.05	User should be able to do smart search in all search fields.	
9.06	Proper error handling is implemented preventing disclosure of sensitive information.	
10	Session Management Requirements	
10.01	The system should support an idle or inactivity timeout for session. Session timeout is set to 15 minutes for active session opened.	A screen should be available in the System Administration page to set the session time outs. By default, timeouts are set by BDO standard for non customer facing applications.
10.02	Session IDs are random and unpredictable to avoid attacks.	
10.03	Session ID changes/renews each time a user authenticates to the application, and is invalidated on the server side upon logout.	
10.04	The system uses session cookies, the 'HttpOnly' and 'SecureFlag' attributes are enabled using set-cookie directive	
10.05	A user session is established only after valid credentials are provided. Insecure implementation of programs (e.g. Java Servlets), which potentially allow access to the application without a successful login, are disallowed.	
10.06	Only session IDs generated by the application framework are recognized as active by the application	
10.07	For internal systems, limit the number of concurrent sessions to a single device. An opened session to a different device will prompt a logoff on the previous device session.	
11	Integration Requirements - Webservice /APIs	
11.01	Web service/API authenticates the calling application/system through OAuth2.0 or similar methods. Internal APIs handling financial transactions must implement OAuth at the minimum.	
11.02	Public-facing web services/API implements mTLS or an equivalent mutual authentication method	
11.03	Web service/API authorizes whether a calling application has access to a requested method.	
11.04	Sensitive information required for further processing by other application logic (e.g. client phone number to send OTPs) should be handled exclusively by back-end components, and must not pass through or stored in the client's browser or the calling application	
11.05	Information contained in the response should be limited only to what is necessary for the web service's/API's purpose.	
11.06	Web service/API audit logs are able to capture the following events: - Failed access attempts - Denied access - Input validation failures, and other failures in security policy checks	
12	Batch Process Requirements	
12.01	Access to execute batch process is restricted to authorized users.	
12.02	Target locations for extracted data have strict access controls.	

12.03	Batch process authenticates to the database server before it is allowed access to data.	
12.04	Batch process connects to a database management system with standard security features, but not limited to, authentication, access control and audit logging.	
12.05	Credentials used by the batch process are not hard-coded within the application binaries or programs, but are set in a configuration file that can be made accessible only to authorized users.	
12.06	Least privilege access needed by the application is assigned to the credential used to access the database.	
12.07	Batch process makes use of available strong cryptography and/or security protocols such as TLS, SSH and IPSEC to safeguard sensitive data during transmission over private and public network.	
12.08	Audit logs record elements that can pinpoint origin of the batch process, when it was executed and who triggered it.	
13	Scalability Requirements	
13.01	The system should perform in normal response time even if maximum load is encountered	- No downtime during application scaling should be encountered for the system - For Database Scaling : maximum of 120 minutes downtime and would only be done manually
14	Regulatory Requirements	
15	Should fulfill Capacity and Performance Requirements (see Tables below) (refers to the requirements that impact the performance relative the amount of resources and maximum limits of the system)	
16	Should fulfill Data Retention and Archiving Requirements (see Tables below)	
17	Should fulfill Availability Requirements (refers to requirements that impact a system's accessibility)	
17.01	Defined operating hours (Defined operating hours refers to the day and time during which a business or organization is open for users to do business. On the context of this project, please specify the day and time the users are expected to use this module (e.g. Monday - Friday, 8:00AM to 5:00PM))	06:00 AM - 10:00 PM Mondays - Fridays Monthend period falling on weekends (06:00 AM - 10:00 PM)
17.02	Defined locations (Defined locations refers to the site where business transactions can be performed. On the context of this project, please specify to which locations can a user access this module (e.g. Main office, satellite offices, branch, at home or anywhere via remote access, anywhere via Internet, etc.)	Head Office - Makati and Ortigas Provincial Offices: - North Luzon: 3rd Floor BDO Building, Ramon Tang Ave., Balibago, Angeles City - Cebu: 3F BDO Cebu Regional Office, Gorordo Ave., Lahug, Cebu City - CDO: 5f Floor Regional Office, Limketkai Commercial Complex, Brgy. 31 Poblacion, Cagayan de Oro City - Davao: 4/F BDO Bldg. #30 CM Recto Ave. Davao City - Gensan: 2ND FLOOR BDO NETWORK BANK SANTIAGO BLVD. BRGY EAST, GENERAL SANTOS CITY , 9500

17.03	Defined maintenance window (Defined maintenance windows refers to the period of date and time designated in advance by the technical staff, during which preventive maintenance that could cause disruption of service may be performed.)	Follow standard window time
18	Should fulfill Reliability and Recoverability Requirements (refers to the requirements that impact a system's ability to deliver critical business services and to recover from sudden errors or downtimes)	
18.01	RTO (recovery time objective) Refers to the maximum tolerable length of time that a computer, system, network, or application can be down or should be operational after a system failure or disaster occurs (e.g. within 2 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.02	RPO (recovery point objective) Refers to the maximum acceptable amount of data loss measured in time. It is the age of the files or data in backup storage required to resume to normal operations of a computer system or network failure occurs. In other words, this refers to a point in the past from which data should be recovered to make a system operational after a system failure (e.g., data within the last 4 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.03	Disaster Recovery Server Required (Y/N)	YES
18.04	Recovery Processes documentation	YES

15a. Performance and Capacity Requirements

Consider if Performance & Capacity Requirements are applicable to your project. Values on the table are sample requirements you can use.

NFR ID	Business Process / Transaction Type	User Channel / Touchpoint	Group	User Count		Current Transaction Volume	Projected Growth	Expected Response / Processing Time (Turn-)	Acceptable Error Rate	Interfaced Systems	Average File Size per System (Bulk/per file)	Maximum File Size per System (Bulk/per file)	Frequency
				Max	Concurrent								
15.01	User Login /Logout	Web (Internal / Within BDO Network)	Provincial Branches	20	10	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Corporate	50	20	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Retail	20	15	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Comptrollership	10	5	5 tps	10%	5 seconds	2%	LDAP			Daily
			Application Management Support	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
			BDOI - IT	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
			DCO	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
15.02	All UI Screen loading		All user groups	130	56	10 tps	10%	5 seconds	2%				Daily
15.03	Disposition transaction update	Web (Internal / Within BDO Network)	Provincial Branches	20	10	1,200 tpd	10%	5 seconds	2%				Daily
			Head Office - Corporate	50	20	1,200 tpd	10%	5 seconds	2%				Daily
			Head Office - Retail	20	15	1,200 tpd	10%	5 seconds	2%				Daily
15.04	Application of Payment	Web (Internal / Within BDO Network)	Provincial Branches	20	10	1,200 tpd	10%	5 seconds	2%				Daily
			Head Office - Corporate	50	20	1,200 tpd	10%	5 seconds	2%				Daily
			Head Office - Retail	20	15	1,200 tpd	10%	5 seconds	2%				Daily

1. Introduction

1.1 Purpose and Scope of the Document

This document defines the business requirements for Collection Management System (CMS)

The Business Requirements Document (BRD) lists the capabilities expected from the solution / service to meet the outcomes of the Business Request (BRQ) approved in the business case. The BRD should be more descriptive than the original BRQ but should not detail how each capability will be built or which system it will be built in unless the detail is critical to the explicitly stated outcome.

This document shall be updated as requirements are further defined and finalized based on discussions, recommendations and feedback from business and technical stakeholders. Unless otherwise stated, all requirements are considered high priority and committed for this phase.

1.2 Intended Audience

INVOLVEMENT		NAME	GROUP
Author		Zean C. Ibay	OP BPDS

		BDOI	
Process Owner		Shellah Marie C. Miranda	BDOI

1.3 Definition of Terms

List down all terms, not limited to Acronyms, used in the document to help the readers understand the content.

Term	Category	Credit Term Extension	Definition
CTE			
Marketing Diary			Contains the information on when, where, how and what of the client's instruction on payment or AR settlement.

1.4 References

Include here the Business Request (BRQ) and Business Case, or any other related documents, used in preparing this BRD.

DOCUMENT ID	TITLE	AUTHOR

2. Overview

The Collection Process will provide a user-friendly interface for monitoring and managing outstanding Premium Receivables (PR) and unapplied payments. The system will enable authorized users to generate reports, update records, and track dispositions.

2.1 Business Objectives

The Collection Process aims to have:

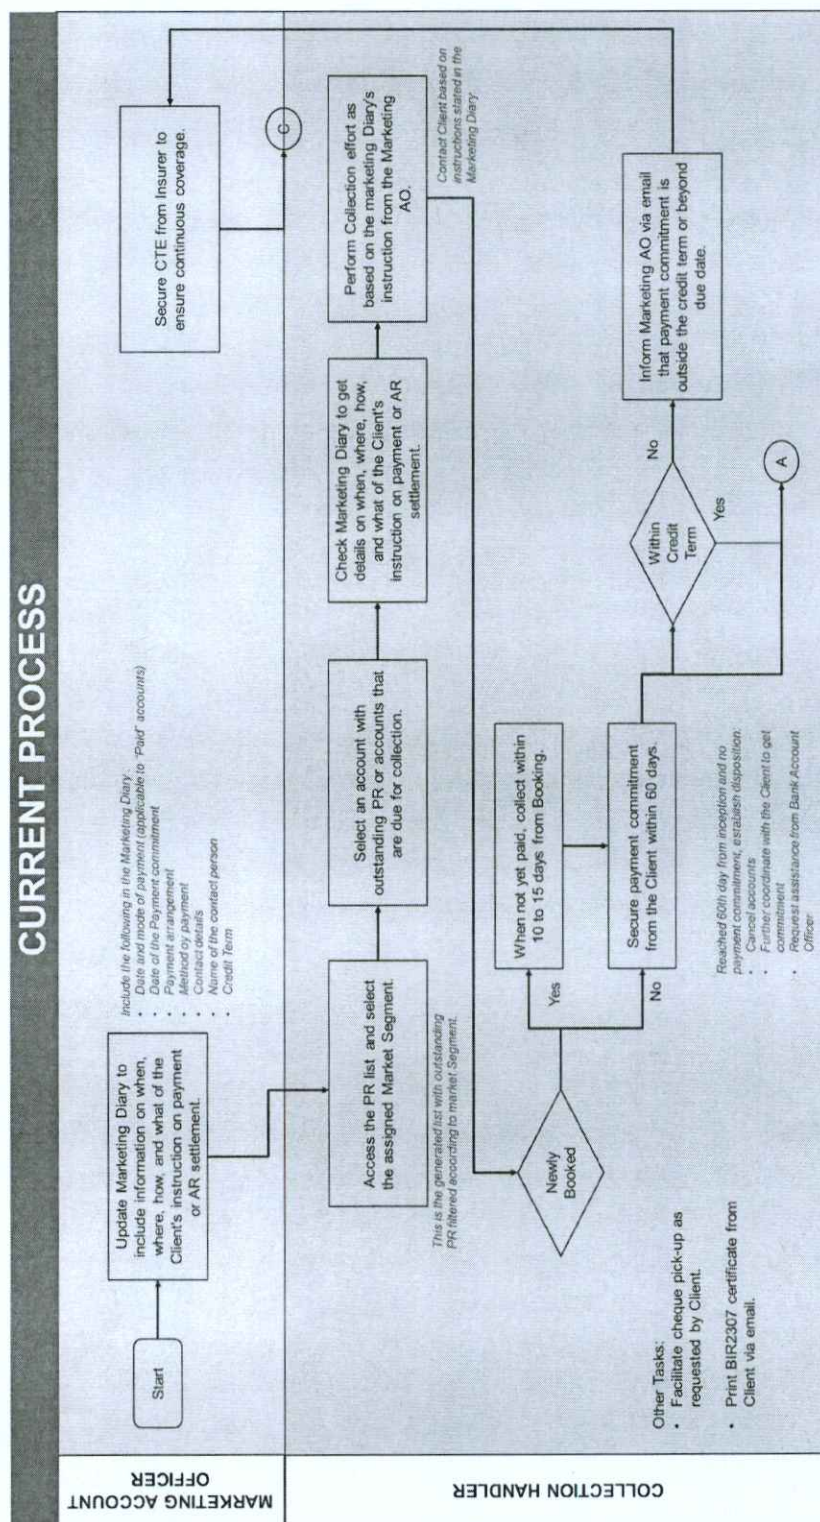

1. Provide a system / module for generating and managing outstanding PR list and unapplied payments collection / disposition.
2. Automate the process of adding / uploading and updating records.
3. Improve data accuracy and reduce manual errors.
4. Enhance user experience through a user-friendly interface.
5. Provide audit logs for tracking user-initiated changes and updates.
6. Automate the generation of daily, weekly, monthly and ad-hoc reports.
7. Ability to filter and sort data by Market Segment and disposition status.

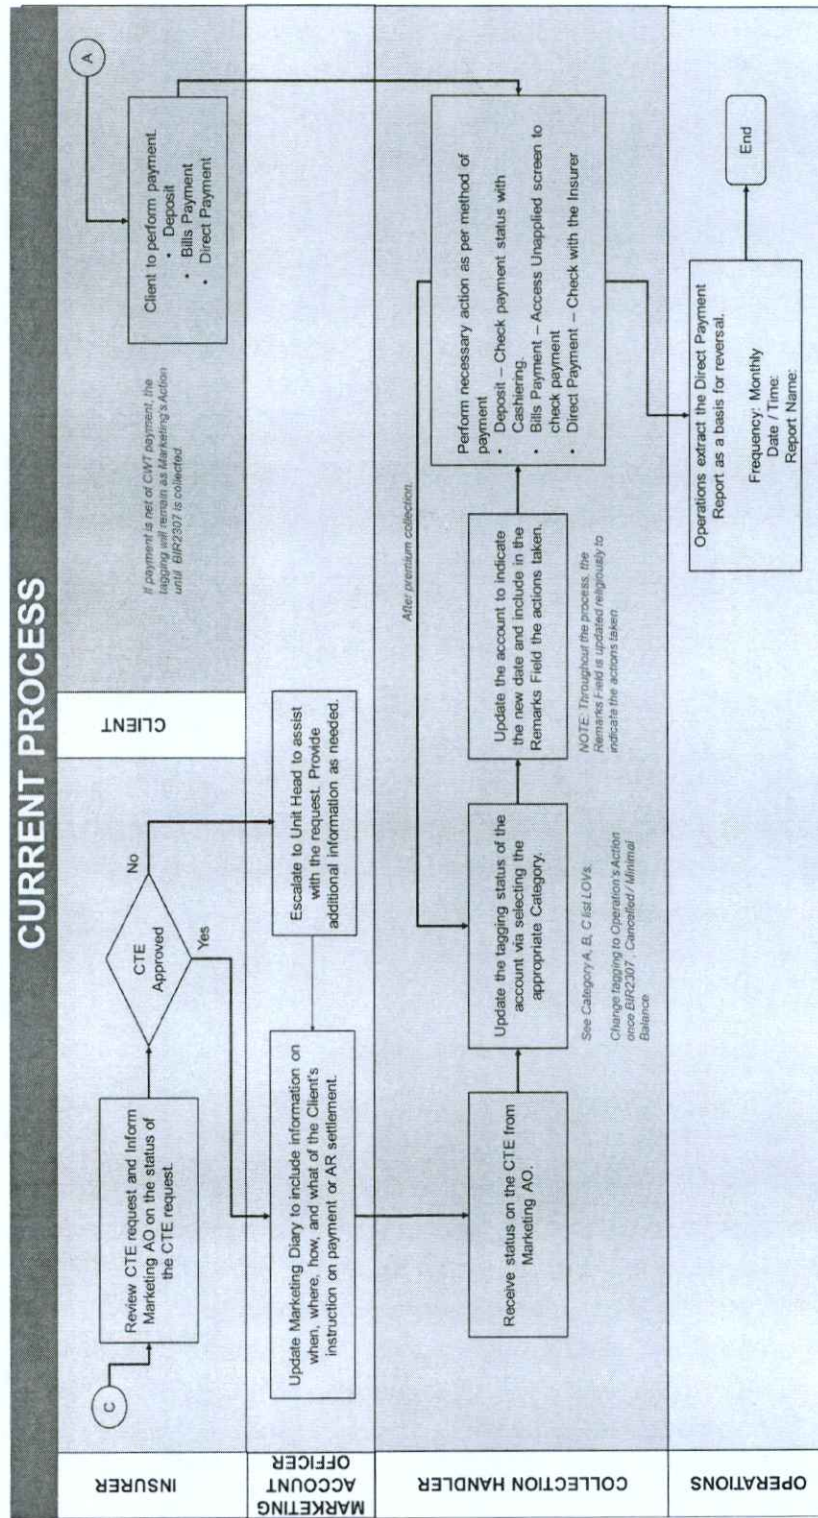

2.2 Assumptions and Limitations

1. EBIX integration is feasible and compatible.
2. Necessary data is available and accessible.
3. User training will be provided.
4. System maintenance will be performed regularly.
5. The file will be in a specific format agreed upon.
6. The report will contain specific information agreed upon with the stakeholders.
7. Authorized users have the necessary permissions.

3. PROCESS DIAGRAM

TARGET PROCESS

SYSTEM

PREMIUM RECEIVABLE

- 1 Access the generated PR list and select the assigned Market Segment.
- 2 Select an account with outstanding PR or accounts that are due for collection.
- 3 Check Web Form for Marketing Diary information.
- 4 Provide disposition to the premium receivable.
- 12 Update the tagging status of the account via selecting the appropriate Category.
- 13 Update Remarks field of the account to indicate updates and actions taken.
- Generate the Direct Payment Report as a basis for reversal.
- Generate the PR2307 Report as a basis for reversal.
- Generate the Outstanding PR List.

UNAPPLIED PAYMENT

- 1 Access the generated list of unapplied payments filtered by Market Segment and disposition status.
- 2 Review and provide Unapplied payment disposition based on LOVs.
- 3 Update Remarks field of the account to indicate updates and actions taken.
- 4 Access Unapplied Payment list with disposition.
- 5 Generate a file that goes to the work flow of the Automated Payment System.

MANUAL PROCESS

- 5 Perform Collection effort as based on the Marketing Diary's instruction.
- 6 Secure payment commitment from the Client within 60 days.
- 7 Inform Marketing AO via email that payment commitment is outside the credit term or beyond due date.
- 8 Secure CTE from Insurer to ensure continuous coverage.
- 10 Escalate to Unit Head to assist with the request. Provide additional information as needed.
- 11 Receive status on the CTE from Marketing AO.
- 14 Perform necessary action as per method of payment.

INSURER

- 9 Review CTE request and Inform Marketing AO on the status of the CTE request.

ISYS

- 9 Update Marketing Diary.

5. Business Requirements (FUNCTIONAL)

FR ID	Activity	Capability/ Requirement	RQ ID	Additional Remarks	Phase / Release	Mandatory?	High Risk?
FRID-001	Generating a list of accounts	The system should have a module with user interface and database where the user can generate the list of accounts with outstanding premium receivable at the Cover Number level.	RQID-001				
FRID-002	Generating a list of accounts	The system must have access to the necessary data and calculations to determine the outstanding premium receivable for each account.	RQID-002				
FRID-003	Checking and adding the PR balance	The system should be able to check and add the PR balance across invoices to determine if there is an outstanding PR.	RQID-003				
FRID-004	Checking and adding the PR balance	The system must have access to the necessary invoice data and calculations to determine the PR balance.	RQID-004				
FRID-005	Checking and adding the PR balance	The system shall use the minimal balance threshold value to determine which accounts to include in the outstanding premium receivable list.	RQID-005				
FRID-006	Data / Reference Management	The system must be able to store the minimal balance threshold.	RQID-005				
FRID-007	Data / Reference Management	The system must have a capability to allow authorized users to update and maintain the minimal balance threshold.	RQID-005				
FRID-008	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a sum of 0 (zero) or below the minimal balance threshold.	RQID-006				
FRID-009	Checking and adding the PR balance	Invoices with a sum of 0 or below the minimal balance threshold should not be considered outstanding. The system must have the functionality to include in the list those invoices with a sum above the minimal balance threshold. Invoices with a sum above the minimal balance threshold should be considered outstanding.	RQID-007				
FRID-010	Checking and adding the PR balance	The system must have the functionality to not include in the list those invoices with a negative balance if they have a transaction type of C (Cancelled).	RQID-008				
FRID-011	Data Filtering	Invoices with a negative balance and transaction type C should not be considered outstanding. The system should have a mechanism to filter the generated list of accounts with outstanding premium receivable based on Market Segment and per Unit Head.	RQID-009				
FRID-012	Data Filtering	The system shall display only the accounts that belong to the selected Market Segment and Unit Head.	RQID-009				
FRID-013	Batch Processing	The system should have a daily batch process that extracts all data from EBIX which will run after EOD financial at 10:00PM. EBIX is the source system for the necessary data.	RQID-010				
FRID-014	Batch Processing	There should be a daily batch process to upload new records from EBIX to the system. Schedule run: After EOD financial at 10:00PM. The system will receive new records from EBIX.	RQID-011				
FRID-015	Batch Processing	There should be a daily batch process to update existing records from the system to the system. Schedule run: After EOD financial at 10:00PM. The system should be able to store the list of values for Premium Receivable Collector Disposition.	RQID-012				
FRID-016	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Premium Receivable Collector Disposition.	RQID-013				
FRID-017	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Premium Receivable Collector Disposition.	RQID-014				

FRID-018	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Premium Receivable Collector Disposition.	RQID-014				
FRID-019	Data / Reference Management	The system should have a field showing who performed the encode and update of information	RQID-015				
FRID-020	User Activity Tracking	The system should have a mechanism to capture, store and display the user ID.	RQID-016				
FRID-021	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition.	RQID-017				
FRID-022	Audit Log Maintenance	The system should have a history of existing records and their disposition. The history should be maintained even if the premium receivable becomes zero or below the minimal balance threshold.	RQID-018				
FRID-023	Audit Log Maintenance	The system will maintain the history of records, and their disposition regardless of changes in the premium receivable.	RQID-019				
FRID-024	Batch Processing	The system should have a monthly batch process to generate file with disposition "DP PR for reversal"	RQID-020				
		The system will have the necessary data and calculations to generate invoices with the specified disposition.					
		Schedule Run: After EOD financial at 10:00PM					
FRID-025	User Activity Tracking	The auto-generated DP PR For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month	RQID-021				
FRID-026	Batch Processing	The system should have a monthly batch process to generate file with disposition "PR 2307 for reversal".	RQID-022				
		The system will have the necessary data and calculations to generate invoices with the specified disposition.					
		Schedule Run: After EOD financial at 10:00PM					
FRID-027	File Generation	The auto-generated PR 2307 For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month	RQID-023				
FRID-028	Batch Processing	The system should have a batch process to auto-generate as of end of Friday weekly reports per unit per branch in excel format.	RQID-024				
		Format: Excel					
		Frequency: Weekly					
		Date Range: Transactions for the week (Saturday-Friday EOD)					
		Schedule Run: Friday - after EOD financial at 10:00PM					
FRID-029	File Generation	The system should have the capability to allow authorized user to view the auto-generated as of end of Friday weekly reports per unit per branch in excel format at 08:00am on the following Monday.	RQID-025				
		Schedule Run: After EOD financial at 10:00PM					
FRID-030	Unapplied Payment Management	The system should allow the Collector Handler to request application of payment.	RQID-026				
FRID-031	Unapplied Payment Management	The system should allow the Collector Handler to document the disposition of the unapplied payment.	RQID-027				
FRID-032	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to request application of payment.	RQID-026				
FRID-033	Unapplied Payment Management	The system should allow the Unapplied Payment Handler to document the disposition of the unapplied payment.	RQID-027				
FRID-034	Data Filtering	The system should have a user interface and database module for generating the list of unapplied payments using the current system date for generating the list.	RQID-028				
FRID-035	Data Filtering	The system should have a mechanism to filter via Market Segment and disposition status the generated list of unapplied payments.	RQID-028				

FRID-036	Data Filtering	The generated list of unapplied payments as of the current system date is filtered according to Market Segment and disposition status showing the required data from the Payments Master List Report, generated by the Automated Payment Processing program showing the following data: Date of Payment (Transaction Date) Payment File Name Transaction Number Paid Amount Payment Type Payor's Name Bank Code Check # Reference Number (from the Payment File) Client Code Match Assured's Name PR Balance Inception Date Market Segment Business Origin Unit Head Account Officer - Should be the name and not used Insurer - Should be the name and not used Processing Stage PN Number/Loan Application Number Age (current date - payment date) System Generated Remarks UNIT HEAD should be the name and not used ACCOUNT OFFICER should be the name and not used BANK OFFICER should be the name and not the user ID EBI INVOICE NUMBER should be in this format - 100622656	RQID-029			
FRID-037	Data / Reference Management	The system should allow authorized user to perform an update (add, deactivate) of the list of values for Unapplied Payment Disposition.	RQID-030			
FRID-038	Data / Reference Management	The system should not allow user to select the deactivated value from list of values for Unapplied Payment Disposition.	RQID-030			
FRID-039	Data / Reference Management	The system should be able to store the list of values for Unapplied Payment Disposition.	RQID-031			
FRID-040	Audit Log Maintenance	The system should have a mechanism to track and store the history of records and their disposition. The history should be maintained even if the payment has already been applied or refunded.	RQID-033			
FRID-041	Batch Processing	The system should have a facility to perform a daily batch process that auto-generates a files of those records with disposition "for application to invoice" in text file format containing the required information. Format: Text Frequency: Daily Condition: Records with disposition "for application to invoice" Schedule Run: should be loaded and available to the BDOI file server (FS04) before 6:00 AM the next day.	RQID-034			
FRID-042	File Loading	The system should have capability to load to the BDOI file server the auto-generated file of those records with disposition "for application to invoice".	RQID-035			
FRID-043	Audit Log Maintenance	The system should have an audit log of all users that initiated changes/updates, indicating the field and the "from" and "to" values, as well as the user ID.	RQID-036			
FRID-044	Audit Log Extraction	The system will capture and store the necessary information to track user changes/updates. The system should have a mechanism to extract or view the audit log on demand	RQID-037			

FRID-045	Batch Processing	The system should have a daily batch process to generate the PR Report. Schedule Run: After EOD financial at 10:00PM							
FRID-046	Checking and adding the PR balance	The system must be able to show the net outstanding PR and its breakdown. (e.g. Booked premium less negative endorsement / adjustments/cancellations, and payment/s) This is for premiums that are not fully paid / partially paid.							
FRID-047	Unapplied Payment Management	The system must have the capability to validate if the invoice number starts with "I" followed by 8 numeric characters when "for application to invoice" is selected as a disposition.							
FRID-048	Unapplied Payment Management	The system should not allow submission unless a valid invoice number is provided. The invoice number field must be marked as mandatory when "for application to invoice" is selected.							

[Handwritten signature]

6. Business Requirements (NON-FUNCTIONAL)

1) List all the non-functional requirements needed by the project including but not limited to security, system performance and resiliency.

2) The following Non-Functional Requirements are samples. Please replace them and add to them as applicable to your project.

NFR ID	Requirement	Additional Remarks
1	User Authentication Requirements	
1.01	As a user, I should be able to open the application using my windows credentials in the application login page so that I could use only one credentials for all the application I am using.	System should be able to use SSO. - password should be encrypted and is not visible in inspect tool - only users granted access to the system and has a setup user profile could access the system Logon credentials: - user id -- employee id - password -- windows password
1.02	As a user, I should be able to see my password masked unless I select to unmask it as it is being entered to the system to prevent exposure of the password	
1.03	As a user, I should be able to see my log on error messages to be user friendly and not code based error messages so that I would understand the error prompts.	Error Prompt: - Invalid User Name or Password - User does not exist User ID maintenance:
1.04	The system should be able to log all valid and invalid attempts to access the application. Only the System Administrator should be able to see the logs for user access attempts.	- Should able to log all valid and even invalid attempts. - Users should be locked out to the system after 3 invalid attempts
2	Password Requirements	System should use SSO and follow existing BDO compliance password requirements
2.01	Password is validated without exposing the clear text value of the stored password (e.g. hash / masking)	
2.02	The system should lock out or disable access of user after three (3) invalid password attempts	
2.03	The system should support mandatory password change at least once every 90 days as per LDAP compliance.	
2.04	Minimum password length is eight characters (8). For system accounts with administrator privileges, minimum password length is twelve (12) characters.	
2.05	Composition of complex passwords is supported by requiring creation of passwords consisting of: - Combination of alphabetic, numeric, and special characters - Combination of upper case and lower case alphabetic characters	
2.06	Re-use or recycling of previous/last eight (8) passwords is prevented	
2.07	The application supports a minimum password age of one (1) day to prevent users from cycling through previous passwords until password resets	
2.08	password reset attempts (e.g. forgot password) must notify the identity of the user initiating the request through out-of-band validation	
2.09	Input data in the UserID and Password fields should be evaluated for the following factors: a) Length of data is ten (10) characters b) Only accept permitted characters	

2.10	The system should be capable of adapting to changes in specific values of password parameters (e.g. 90 for expiration, 3 for lockout, 8 for password length, etc) in response to changes in the level of security threats.	
3	Access Control Requirements	
3.01	The system should be able to provide maintenance function for user administration, which supports user creation, update, deactivation and account locking/unlocking.	
3.02	The system should support role based access control.	
3.03	The system should be able to support creation of custom roles or support granular level of access	
3.04	The system should not allow users to have multiple roles.	
3.05	The system should protect against any parameter manipulation that can bypass authorization preventing exposure or incorrect object reference.	
4	Audit Logging Requirements	
4.01	The system audit logs record successful and rejected system access attempts (i.e. login, logout), privileged system usage, as well as account changes such as creation, deactivation, and assignment of user roles.	
4.02	The system audit logs record successful admin maintenance actions (e.g. userID creation/deactivation, elevated access of userID).	
4.03	The system audit logs record the following admin and user activities: Application Maintenance and Backend Activities - Application startup and shutdown. - Application failures. - Application configuration changes. - Accessing of audit logs - Pausing, clearing, or deleting audit logs, as applicable Application Usage, such as, - Access and updates of customer records, whether customer-initiated, or done through back office facilities. - Financial transactions initiated within the application, as applicable. - Device enrollment or unenrollment, as applicable.	At the minimum, audit logs should log the following information: - Event timestamp. - User account/s involved in the event. - Source (workstation, device, or IP address) of the event. For systems situated behind a load balancer or anti-DDoS solutions, the original source IP should be logged. - Resources accessed, if any (e.g. URL, file path, etc.).
4.04	Application software logs such as Tomcat or IIS does not log sensitive information such as credentials, and session tokens, and other data defined under local privacy laws or relevant security policies.	
4.05	Audit logs should be exportable, or made available for sending to remote log monitoring systems as needed.	
5	Input Data Checking and Validation Requirements	
5.01	Input data is validated and sanitized (e.g. within length boundaries, contains permitted characters, correct syntax, etc) to protect against code injection attacks which include, but not limited to - sql injection, cross-site scripting, buffer, heap, or integer overflow, and denial-of service.	
6	Database Authentication Requirements	
6.01	The database management system has standard security features that include, but not limited to, authentication, access control and audit logging.	
6.02	Access to the database is only allowed after proper authentication.	
6.03	Credentials are not hard-coded within the application binaries or programs, but are set in a server configuration file or repository that can be made accessible only to authorized users, or encrypted when stored in client machines.	
6.04	Least privilege access level or only the needed privilege is granted when accessing the database.	
6.05	Low level database functions such as xp_cmdshell and extproc, that enable access to execute commands in the operating system, are not used by the system	
7	Application Encryption Requirements	
7.01	The system should make use of available security protocols (e.g. HTTPS, SFTP/FTPS, SSH etc.) to protect sensitive data during transmission over networks.	
8	Application Configuration and Library Dependency Requirements	
8.01	The system should ensure proper error handling preventing disclosure of sensitive information such as stack traces, failed SQL statements, underlying web server platform and other debugging information.	

8.02	Source code control system is in use, with procedures to ensure that check-ins are accompanied by issues or change tickets. The source code control system should have access control and identifiable users to allow traceability of any changes.	
8.03	Proper versioning for any system changes should be implemented.	
8.04	The system should NOT use unsupported, insecure, or deprecated client-side technologies, container images, and/or libraries.	
8.05	Third party components come from pre-defined, trusted and continually maintained repositories.	
8.06	Inventory catalog is maintained of all third party libraries in use. Version and support information is also maintained to track when a library becomes outdated.	
8.07	Least privilege access level or only the needed privilege is granted when accessing the database.	
	New application database and history must complement the existing integrating applications for ease of integration and traceability.	
9	User Interface and Experience Requirements	
9.01	The system user interface must follow existing BDOI Application UI to have a uniform experience for all BDO Insure applications.	
9.02	For internal systems, concurrent open sessions should be allowed and will follow session management requirements.	
9.03	Allow locking of a transaction when one user is actively editing the said transaction. An error prompt to the new user will indicate that "Username" is editing the transaction.	
9.04	User should be able to copy/paste from their local computer to the Application in all fields that are applicable.	
9.05	User should be able to do smart search in all search fields.	
9.06	Proper error handling is implemented preventing disclosure of sensitive information.	
10	Session Management Requirements	
10.01	The system should support an idle or inactivity timeout for session. Session timeout is set to 15 minutes for active session opened.	A screen should be available in the System Administration page to set the session time outs. By default, timeouts are set by BDO standard for non customer facing applications.
10.02	Session IDs are random and unpredictable to avoid attacks.	
10.03	Session ID changes/renews each time a user authenticates to the application, and is invalidated on the server side upon logout.	
10.04	The system uses session cookies, the 'HttpOnly' and 'SecureFlag' attributes are enabled using set-cookie directive	
10.05	A user session is established only after valid credentials are provided. Insecure implementation of programs (e.g. Java Servlets), which potentially allow access to the application without a successful login, are disallowed.	
10.06	Only session IDs generated by the application framework are recognized as active by the application	
10.07	For internal systems, limit the number of concurrent sessions to a single device. An opened session to a different device will prompt a logoff on the previous device session.	
11	Integration Requirements - Webservice /APIs	
11.01	Web service/API authenticates the calling application/system through OAuth2.0 or similar methods. Internal APIs handling financial transactions must implement OAuth at the minimum.	
11.02	Public-facing web services/API implements mTLS or an equivalent mutual authentication method	
11.03	Web service/API authorizes whether a calling application has access to a requested method.	
11.04	Sensitive information required for further processing by other application logic (e.g. client phone number to send OTPs) should be handled exclusively by back-end components, and must not pass through or stored in the client's browser or the calling application.	
11.05	Information contained in the response should be limited only to what is necessary for the web service's/API's purpose.	
11.06	Web service/API audit logs are able to capture the following events: - Failed access attempts - Denied access - Input validation failures, and other failures in security policy checks	
12	Batch Process Requirements	
12.01	Access to execute batch process is restricted to authorized users.	
12.02	Target locations for extracted data have strict access controls.	

12.03	Batch process authenticates to the database server before it is allowed access to data.	
12.04	Batch process connects to a database management system with standard security features, but not limited to, authentication, access control and audit logging.	
12.05	Credentials used by the batch process are not hard-coded within the application binaries or programs, but are set in a configuration file that can be made accessible only to authorized users.	
12.06	Least privilege access needed by the application is assigned to the credential used to access the database.	
12.07	Batch process makes use of available strong cryptography and/or security protocols such as TLS, SSH and IPSEC to safeguard sensitive data during transmission over private and public network.	
12.08	Audit logs record elements that can pinpoint origin of the batch process, when it was executed and who triggered it.	
13	Scalability Requirements	
13.01	The system should perform in normal response time even if maximum load is encountered	- No downtime during application scaling should be encountered for the system - For Database Scaling : maximum of 120 minutes downtime and would only be done manually
14	Regulatory Requirements	
15	Should fulfill Capacity and Performance Requirements (see Tables below) (refers to the requirements that impact the performance relative the amount of resources and maximum limits of the system)	
16	Should fulfill Data Retention and Archiving Requirements (see Tables below)	
17	Should fulfill Availability Requirements (refers to requirements that impact a system's accessibility)	
17.01	Defined operating hours (Defined operating hours refers to the day and time during which a business or organization is open for users to do business. On the context of this project, please specify the day and time the users are expected to use this module (e.g. Monday - Friday, 8:00AM to 5:00PM))	06:00 AM - 10:00 PM Mondays - Fridays Monthend period falling on weekends (06:00 AM - 10:00 PM)
17.02	Defined locations (Defined locations refers to the site where business transactions can be performed. On the context of this project, please specify to which locations can a user access this module (e.g. Main office, satellite offices, branch, at home or anywhere via remote access, anywhere via Internet, etc.)	Head Office - Makati and Ortigas Provincial Offices: - North Luzon: 3rd Floor BDO Building, Ramon Tang Ave., Balibago, Angeles City - Cebu: 3F BDO Cebu Regional Office, Gorordo Ave., Lahug, Cebu City - CDO: 5f Floor Regional Office, Limketkai Commercial Complex, Brgy. 31 Poblacion, Cagayan de Oro City - Davao: 4/F BDO Bldg. #30 CM Recto Ave. Davao City - Gensan: 2ND FLOOR BDO NETWORK BANK SANTIAGO BLVD. BRGY EAST, GENERAL SANTOS CITY, 9500

17.03	Defined maintenance window (Defined maintenance windows refers to the period of date and time designated in advance by the technical staff, during which preventive maintenance that could cause disruption of service may be performed.)	Follow standard window time
18	Should fulfill Reliability and Recoverability Requirements (refers to the requirements that impact a system's ability to deliver critical business services and to recover from sudden errors or downtimes)	
18.01	RTO (recovery time objective) Refers to the maximum tolerable length of time that a computer, system, network, or application can be down or should be operational after a system failure or disaster occurs (e.g. within 2 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.02	RPO (recovery point objective) Refers to the maximum acceptable amount of data loss measured in time. It is the age of the files or data in backup storage required to resume to normal operations of a computer system or network failure occurs. In other words, this refers to a point in the past from which data should be recovered to make a system operational after a system failure (e.g., data within the last 4 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.03	Disaster Recovery Server Required (Y/N)	YES
18.04	Recovery Processes documentation	YES

15a. Performance and Capacity Requirements

Consider if Performance & Capacity Requirements are applicable to your project. Values on the table are sample requirements you can use.

NFR ID	Business Process / Transaction Type	User Channel / Touchpoint	Group	User Count		Current Transaction Volume	Projected Growth	Expected Response / Processing Time (Turn- around)	Acceptable Error Rate	Interfaced Systems	Average File Size per System (Bulk/per file)	Maximum File Size per System (Bulk/per file)	Frequency
				Max	Concurrent								
15.01	User Login /Logout	Web (Internal / Within BDO Network)	Provincial Branches	20	10	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Corporate	50	20	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Retail	20	15	10 tps	10%	5 seconds	2%	LDAP			Daily
			Head Office - Comptrollership	10	5	5 tps	10%	5 seconds	2%	LDAP			Daily

15.14	System Administration	Web (Internal / Within BDO Network)		Application Management Support	10	2	10 tpd	10%	5 seconds	2%				
	(Technical Parameter)			BDOI - IT	10	2	10 tpd	10%	5 seconds	2%				

23b. Data Retention & Archiving

Consider if Data Retention & Archiving Requirements are applicable to your project. Values on the table are sample requirements for reference: PPC No. DOCMNGT-GENPOL-002.pdf

NFR ID	Data	Retention Period (Data-In-Use / Online)	Archival Period (Data-at-Rest / Offline)	Disposal / Purging Period	Backup Freq	Backup Retention Period
25.18	Application Logs	5 Years	15 years	after 15 years	Every 4 hours	5 Years
25.19	Database Logs	5 Years	15 years	after 15 years	Every 4 hours	5 Years
25.2	Audit Logs (System Level & Secure logs)	5 Years	15 years	after 15 years	Every 4 hours	5 Years
25.21	Infrastructure Event logs	5 Years	15 years	after 15 years	Every 4 hours	5 Years
25.22	Historical data within database	5 Years	15 years	after 15 years	Every 4 hours	5 Years
25.23	Configuration / VMs Snapshots	5 Years	15 years	after 15 years	Every Week	5 Years
25.24	Documents (digital copy)	5 Years	15 years	after 15 years	Every Month	5 Years
25.25	Documents (hard copy)	5 Years	10 years	after 10 years	N/A	N/A
