

OPERATIONS CENTRAL - ADDENDUM¹

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon,
Adjustment/Cancellation, Collection of Commission Receivables (Direct
Payment)

Business Requirements Document (BRD)

Prepared by: Zean C. Ibay

Enterprise Services Group - Business Project Services

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Business Requirements

RMTID.038 should be classified as Operations-wide capability because:

- 1. Remittance only consumes (views) the data
- 2. Multiple operational units interact with the same payment data
- 3. Capability requirement is visibility
- 4. End-to-end traceability requires shared access across units

Business Requirements				
BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria
BRQID.007		System	Capabilities to include, record, update remittance details at the invoice level and ensure visible payment histories including dates, amounts, and AR numbers.	Expected Result: 1. Users can view payment application details directly at the invoice level. 2. The system maintains a clear and complete payment history for each invoice, including: Payment dates, Amounts applied, Associated AR. 3. Updates to payment applications are reflected in real-time and are traceable. 4. Users can audit and reconcile payments efficiently using the visible history. Negative Scenario: Payment applications are recorded but not visible on the invoice.
				Must have.

CASHIERING (Payments Acceptance and Application)

Cashiering (Payments Acceptance and Application)

The updates reflected in BRD - OpsCentral Addendum Workshop SA SolArch are intended to:

- Remove obsolete processes (CSHID.009) that are no longer part of the target operating model
- Refine and strengthen active requirements (CSHID.016) to ensure:
 - Operational efficiency
 - Clear process boundaries
 - System-driven automation
 - Compliance with audit and control expectations

These changes were validated during the walkthrough session captured in MOM 05052026 Operations Cashiering and represent the agreed alignment between Business, SA, and Solution Architecture.

The requirement CSHID.009 (Check Pick-Up) was formally removed from the BRD scope following validation during the Operations BRD walkthrough session.

The decision to remove CSHID.009 is explicitly driven by business confirmation that the process is no longer applicable.

CSHID.009 was removed to:

- Align the BRD with current and future-state business processes
- Eliminate obsolete operational scenarios
- Ensure the solution does not carry unused or irrelevant features

The requirement CSHID.016 (Minimal Balance Handling) remained in-scope but required clarification and refinement based on detailed discussion in the MOM and workshop.

The BRD reflects the updated expectation that the system must automatically handle minimal balances and excess minimal amounts without manual processing or disposition routing.

CSHID.016 was updated to:

- Define clear rules for minimal balance handling
- Enforce full automation for trivial residuals
- Exclude minimal balances from manual workflows
- Ensure configurable and audit-compliant implementation

CASHIERING (Payments Acceptance and Application)

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID-009	1	System	Facility to accept check with “for check pick up” from Collection. As <Persona>, I must be able to	Expected Result: When a collection effort is submitted with the status “for check pick”, the system will: 1. Automatically queue the account into the Cashiering Module. 2. Allow Cashiering to filter accounts based on the check pick up date. 3. Automatically assign a unique acknowledgment receipt number to each account during the filtering/printing process. 4. Ensure that the receipt number is logged and traceable for audit purposes. 5. Display only accounts that are due for acknowledgment receipt printing. Acceptance Criteria: 1. Account with “for check pick” status is automatically queued in Cashiering Module. 2. Cashiering processor can filter accounts by check pick up date. 3. Only accounts due for receipt printing are shown. 4. System assigns a unique acknowledgment receipt number automatically. 5. Receipt number follows the defined format and is logged. Negative Scenario:	Must have.

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

CASHIERING (Payments Acceptance and Application)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Account with incorrect status (e.g., "for follow-up") is not queued. 2. Missing or invalid check pick-up date prevents filtering. 3. Duplicate receipt number causes system error. 4. Account fails to queue due to system integration issue. 5. Receipt number not assigned due to system failure. 6. Accounts not due for printing are incorrectly included in the filtered list.	
CSHID.016	3	System	The system must automatically handle minimal Premium Receivable (PR) balances, including excess payments that result in minimal residual amounts, to ensure efficient processing and avoid unnecessary manual intervention if not equal to the following: a. Two percent (2%) creditable withholding tax b. Amount of DST charged into the account c. Amount of the entire premium	Expected Result: 1. The system automatically identifies: a. Residual PR balances within the defined minimal balance threshold, and b. Excess payments where the remaining excess amount is minimal. 2. These balances are: a. Automatically reversed or cleared by the system b. Not routed to unapplied or disposition workflows 3. Processing is completed without requiring user action, approval, or manual tagging. 4. All system actions are recorded in the audit trail Acceptance Criteria: 1. Given a payment results in a residual balance within the minimal threshold when the transaction is processed then the system automatically reverses or clears the balance without routing it to disposition 2. Given a payment exceeds the receivable and results in a minimal excess amount when the payment is processed then	Must have.

REMITTANCE

Remittance

This Annex documents the validated clarifications, refinements, and updates to selected Remittance-related Business Requirements (RMTID series) based on the walkthrough sessions conducted with Operations, Systems Analysis (SA), and Solution Architecture (SolArch). The purpose of these updates is to align the BRD with confirmed business processes, address identified inconsistencies and gaps, and ensure that all requirements reflect appropriate controls, system ownership boundaries, and operational practices. These refinements also aim to strengthen audit compliance, data integrity, and usability within the remittance module.

The objective is to:

- Align the BRD with validated business processes and system controls
- Address identified gaps, inconsistencies, and ambiguities
- Ensure audit compliance, data integrity, and operational efficiency

Overall, the updates across these RMTID requirements are intended to clarify system behavior, strengthen control mechanisms, and align the BRD with validated operational processes. The key themes of these changes include the enforcement of strict duplicate prevention in both automated and manual extraction, the clarification of process sequencing for document generation, the enhancement of user interface visibility for extracted data, and the establishment of clear system ownership boundaries—particularly in restricting payment application functionality to a view-only capability within the remittance module.

Operations

REMITTANCE

Business Requirements

BR ID	Proces s Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
RMTID.001	1	System	Facility to allow extraction per Insurer and per remittance type (With Incentives, Normal-Dollar, Normal-Peso), , ensuring that only eligible accounts are included based on defined criteria and current processing rules. Frequency: Off-peak execution. Batch Run: TDB	Expected Results: - System allows users to select an Insurer and Remittance type, and successfully extract relevant accounts. Acceptance Criteria: - User can select Insurer and remittance type from dropdowns or filters. - Extraction returns only accounts matching the selected criteria. - Extracted data includes correct remittance type tags. - System to save extracted data in a shared drive -with separate folders for each remittance type (Normal-Peso, Normal Dollar, and w/ Incentives). - Extract reflects the standard naming convention of files. - Exclude accounts with pending or unresolved financial endorsement transactions during extraction. - Accounts with completed or validated adjustment transactions (including negative adjustments) may be included, subject to applicable business rules. - Extract process does not impact the performance of the system. - System to send notification on the result of extract. Negative Scenario: - Extraction fails when remittance type is not selected - Incorrect Insurer selected returns unrelated accounts. - System extracts accounts with mismatched remittance types.	Must have.

Business Requirement Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

REMITTANCE

BR ID	Processes Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID-003	1	System	Automatically extract based on predefined schedules and criteria.	Expected Results: - System performs automatic extraction at scheduled intervals without manual intervention. - Accounts that did not satisfy the remittance criteria shall remain in the repository tagged as not yet for remittance. - Extracted invoices cannot be reprocessed. - System enforces uniqueness across extraction runs. - For Installment Payments, invoices should be included in the remittance extraction even if the account(s) are still in process. Acceptance Criteria: - Scheduler is configurable by admin. - Extraction runs at set times and logs results. - Accounts are auto-tag accordingly: - Extracted- accounts met the specified criteria for extraction and were Included in the extract. - Unextracted not yet due for remittance- accounts that did not meet the specified criteria for extraction and are not yet due for remittance. - Unextracted due for remittance- accounts that did not meet the specified criteria for extraction and are due for remittance. - Returned - accounts met the specified criteria for extraction and were returned by user. Negative Scenario: - Scheduler fails to trigger extraction. - Extraction runs at incorrect times. - Extracted data is incomplete or incorrect.	Must have.

REMITTANCE

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.004	1	Operations	Ability to perform manual extract for specific invoice number per Insurer.	Expected Results: Users can manually extract data for a specific invoice number tied to an Insurer. Acceptance Criteria: 1. Manual extract interface allows invoice number input. 2. Extracted data matches the invoice and Insurer. 3. System confirms successful extraction. 4. Accounts included in manual extract (ad hoc / special remittance) are excluded from subsequent scheduled or automated extraction cycles 5. System prevents duplicate remittance by tagging extracted accounts as already processed under ad hoc remittance 6. Extracted accounts are traceable across extraction cycles to ensure no double inclusion in remittance processing Negative Scenario: 1. Invoice number not found or mismatched with Insurer. 2. Manual extract returns no data or incorrect data. 3. System allows extraction of invalid or unposted invoices.	Must have.
RMTID.011	1	Operations	Print and save copy of remittance schedule and payment request.	Expected Results: System generates printable versions of remittance schedules and payment requests. Acceptance Criteria: 1. Print option is available after submission. 2. Save option is available prior to submission. Save option allows users to export or generate the remittance schedule prior to submission. 3. Printed documents include batch number, Insurer, remittance type, and payment details.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

REMITTANCE

BR ID	Process Step #	Persona	Requirements	Expected Result/Acceptance Criteria	Priority Level
				4. Format is consistent and readable. Negative Scenario: 1. Print function fails or generates incomplete documents. 2. Incorrect data appears on printed schedule 3. Print option is unavailable due to missing status.	
RMTID.024	4	System	Allow User to view extracted accounts.	Expected Results: 1. Users can view a list of accounts that have been successfully extracted. Acceptance Criteria: 1. Extracted accounts are displayed in a searchable and filterable list. 2. Each account shows relevant details (e.g., policy details, Insurer name, policy number, settlement number, remittance type, batch number). NOTE: Relevant details per account should be reflected based on the information indicated in the remittance schedule, as indicated in the provided remittance schedule template. 3. View reflects real-time extraction results. Negative Scenario: 1. Extracted accounts not visible due to UI or backend errors. 2. View shows outdated or incorrect data. 3. Filters do not work as expected.	Must have.

Operations

REMITTANCE

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTHD-037 Will be moved as part of Production Reconciliation.	6	System	Track estimated items in production reports.	Expected Result: Estimated items are included and flagged in production reports. Acceptance Criteria: Reports show estimated items separately with appropriate labels. Negative Scenario: Estimated items are omitted or misclassified in reports.	Must have.
RMTHD-038 Moved up as BRQID.007		System	Capabilities to include, record, update remittance details at the invoice level and ensure visible payment histories including dates, amounts, and AR numbers.	Expected Result: - Users can add, edit, and view payment application details directly at the invoice level. - The system maintains a clear and complete payment history for each invoice, including: Payment dates, Amounts applied, Associated AR. - Updates to payment applications are reflected in real time and are traceable. - Users can audit and reconcile payments efficiently using the visible history. Negative Scenario: - Payment applications are recorded but not visible on the invoice.	Must have.
RMTID.041 Previously PRCID.028	3	System	Provide a system capability to validate eligibility and compute early remittance incentive for qualified CLG/CBG motor and fire accounts, ensuring the incentive is treated as a separate computation from the core remittance and commission processing.	Expected Result: The system evaluates remittance timing and qualifying conditions, and computes the applicable early remittance incentive as a separate and clearly identifiable component, without altering or merging it with the base remittance or commission computation. Acceptance Criteria:	Must have.

Business Requirement Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

REMITTANCE

BR ID	Processes Step #	Persona	Requirements	Expected Result/Acceptance Criteria	Priority Level
				1. System validates eligibility based on remittance date relative to defined period (e.g., within 30 days) and applicable product/account type (CLG/CBG motor and fire accounts) 2. System computes applicable 2% incentive only for qualified accounts. 3. Incentive computation is processed as a separate calculation layer and not combined with base commission or remittance computation 4. System ensures incentive is clearly identifiable and traceable as a distinct value/output 5. System applies incentive only when all required conditions are met and based on available and valid insurer/remittance data Negative Scenario: 1. Incentive applied despite late remittance or missing insurer data. 2. Incentive is computed without complete or valid insurer/remittance data 3. Incentive is incorrectly merged into base commission/remittance values and not distinguishable as a separate component 4. System fails to evaluate eligibility correctly and apply or exclude incentive as required.

May 11, 2026	1.0	Addendum routed for review/sign-off	Zean C. Ibay

PRODUCTION RECON

Purpose

This document represents an addendum to the existing Operations Central Business Requirements Document (BRD), capturing clarifications and additional system requirements identified during workshop and solution architecture discussions.

The addendum focuses on enhancing core operational processes, particularly:

- Production Reconciliation (Prod Recon)
- Remittance and incentive handling
- Operational annotation and tracking capabilities

It follows eSDLC governance by ensuring that updates are documented via an addendum to maintain traceability, control, and audit compliance, without revising the approved baseline BRD.

The primary purpose of this addendum is to:

- Formalize agreed clarifications and enhancements to existing requirements
- Ensure controlled documentation and traceability of changes post-BRD walkthrough
- Align system behavior with updated operational and reconciliation needs
- Provide a single, auditable reference for stakeholder review and approval

The document also reinforces that:

- Changes during service definition require Minutes of Meeting (MoM) documentation
- Post-approval changes must follow formal change management procedures

High-Level Requirements Overview

- Annotation Capture (PRCID.015):
Allows users to record company concerns, instructions, and notations linked to production records without modifying policy, invoice, or financial data.
- Insurer Upload & Reconciliation (PRCID.022):
Enables upload of insurer files, performs record matching using defined identifiers, and assigns reconciliation statuses (e.g., matched, with discrepancy, unmatched) based on comparison and insurer feedback.
- Early Remittance Incentive (PRCID.028):
Validates eligibility and computes incentives for qualified accounts, ensuring the incentive is processed separately from remittance and commission values.

- Scope Update:
 - Cover letter generation (PRCID.003) is no longer included in this addendum.

Across all requirements, the following principles are consistently enforced:

- Data Integrity: Operational inputs (e.g., annotations) must not alter core financial or policy data
- Traceability: All actions must be recorded, linked, and auditable
- Validation & Control: System processing must include validation to prevent incorrect reconciliation or incentive application
- Separation of Logic: Clear distinction between:
 - Matching vs reconciliation outcomes
 - Base financial values vs incentive calculations

This addendum strengthens the Operations Central system by introducing controlled, auditable enhancements to:

- Reconciliation processing
- Operational annotation
- Incentive computation

Overall, it ensures improved accuracy, transparency, and compliance in financial operations while maintaining alignment with governance and documentation standards.

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
PRCID.003	1	System	Generate a cover letter for each extract. The cover letter is the templated email that will be sent to the insurer once the file is ready.	Expected Result: System should generate a cover letter for each extract. The cover letter is the templated email that will be sent to the insurer once the file is ready. Acceptance Criteria: Cover letter includes the necessary information. Negative Scenario: Cover letter is missing or contains incorrect information.	Must have:

Business Requirement Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

REMITTANCE

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
PRCID.015	2	System	Allow User to perform capturing and adding instruction / notation / company concern. 1. Add company concerned 2. Add instruction or notation	Expected Result: Users are able to record and maintain reconciliation-related annotations (company concerned, instructions, notations) within the production register view, without altering any policy, invoice, or financial data. Acceptance Criteria: 1. Users can select or assign company concerned, and input instruction or notation. 2. Annotations are successfully saved and displayed in the system and linked to the specific record in the production register 3. Annotation capability does NOT allow modification on files such as Policy details, Invoice data, Financial fields Negative Scenario: 1. Annotation is not saved or not reflected in the system 2. Company concerned or instruction/notation field is missing or unavailable 3. Annotation is incorrectly applied to the wrong record and/or not properly linked to the selected record 4. System allows modification of policy/invoice/financial data (should NOT be allowed).	Must have.
PRCID.022	3	System	Provide a facility to upload insurer matching results and reconcile accounts by identifying corresponding records and evaluating their reconciliation status. Criteria of account matching: 1. Policy Number 2. Reference Number/Invoice Number File shall contain unmatched data originally part of the file sent by BDOI and additional data not part of BDOI file but reflected as production of insurer in their record. These are unbooked accounts of BDOI.	Expected Result: The system successfully uploads insurer data, identifies corresponding records based on defined matching criteria, and determines the appropriate reconciliation status by considering both system data and insurer feedback. Acceptance Criteria: 1. System allows upload of insurer file containing matching results and additional insurer-reported records. 2. System performs initial record matching. (e.g. based on Policy Number, Reference Number / Invoice Number) 3. System distinguishes between technical match (records correspond based on identifiers) and reconciliation outcome (based on comparison and insurer feedback)	Must have.

Business Requirement Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

REMITTANCE

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. System evaluates and assigns appropriate status (i.e. Matched, Matched with Discrepancy, Unmatched) 5. System incorporates such as insurer feedback (e.g., variance, discrepancy, “not in order”), field-level comparison where applicable 6. System ensures records with discrepancies are NOT automatically tagged as fully matched. 7. Uploaded data are validated, integrated into the system, properly linked to existing or new records Negative Scenario: 1. Upload fails. (Possible reason could be Invalid file format, Missing required fields) 2. System incorrectly tags records as matched despite presence of discrepancies 3. System fails to differentiate between matched and mismatched records and capture insurer feedback or variance 4. Uploaded records are not properly linked to corresponding system records and result in duplicate or inconsistent entries 5. System does not recognize additional insurer-reported records (unbooked accounts).	
PRCID.026	3	System	Consider as matched all accounts with 1.00 and below regardless of BDOI or Insurer. Provide a system capability to evaluate and apply tolerance-based matching for accounts with minimal discrepancies, using a defined threshold of ≤ 1.00 peso or its equivalent value for foreign currency accounts.	Expected Result: 1. Accounts with ≤ 1.00 difference are tagged as matched. 2. The system identifies and treats accounts with discrepancies within the defined tolerance threshold (≤ 1.00 peso or its equivalent) as matched, ensuring consistent handling of minor variances, including those arising from currency conversion. Acceptance Criteria: 1. Matching logic includes threshold condition. 2. System applies tolerance threshold discrepancy ≤ 1.00 peso is considered within tolerance 3. For foreign currency accounts (e.g., USD), discrepancy is evaluated based on peso equivalent value and conversion to peso is applied prior to tolerance evaluation	Must have.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

ADJUSTMENT / CANCELLATION

Purpose

This Addendum to the Business Requirements Document (BRD) for Operations Central – Adjustment and Cancellation is prepared to formally capture and document clarifications, refinements, and additional requirements identified during post-walkthrough discussions.

In alignment with established eSDLC governance practices, this addendum serves as a controlled mechanism to record updates without revising the entire BRD, ensuring that all agreed changes are clearly documented, traceable, and subject to formal stakeholder acknowledgment and approval.

This document is an addendum to the main BRD that:

1. Captures post-workshop clarifications and refinements
2. Defines detailed system requirements for Adjustment & Cancellation
3. Introduces strong validation, control, and audit mechanisms
4. Ensures end-to-end traceability and regulated processing of financial transactions

It is needed to:

- Maintain governance and compliance (eSDLC requirement)
- Provide clear and auditable documentation of changes
- Strengthen financial accuracy and operational controls
- Align the system design with actual business workflows

The document specifically aims to:

- Provide detailed functional and validation requirements for Adjustment and Cancellation processes, covering financial endorsements, transaction validation, recalculation logic, and exception handling.
- Establish end-to-end process control, including transaction return workflows, correction handling by Marketing, and resubmission mechanisms prior to batch posting.
- Define system-enforced validation rules and control measures (e.g., duplicate detection, baseline limits, negative balance checks, and justification capture) to ensure data integrity and prevent erroneous processing.
- Strengthen financial accuracy and consistency through automated recalculation of premium, commission, refund values, and insurer-level allocations based on endorsed changes.

- Ensure auditability and traceability by mandating complete logging of all transactions, including returns, corrections, recalculations, and user actions with timestamps.
- Ultimately, this addendum ensures that the system design and implementation are fully aligned with actual operational workflows, validation requirements, and governance controls, while maintaining compliance with audit and regulatory expectations.

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
MKTID.014 Previously ADJID.002	1	Operations	Select the type of Financial Endorsement a. Change of Total Sum Insured (Increase or Decrease) b. Change in Insured Items, Persons/Members, Units, Locations c. Change in Commission Rate (Increase or Decrease) d. Change in Premium Rate (Increase or Decrease) or Premium Amount e. Extension of Cover (Period of Cover) f. Change of Cover g. Adjustment in Charges (DST, Premium Tax/VAT, LGT, others) - Increase or Decrease h. Minimal Balance	Expected Result: 1. User is presented with a list of financial endorsement types and can select the appropriate one for processing. Acceptance Criteria: 1. All listed endorsement types are available in the dropdown. 2. Selection triggers the appropriate input fields. 3. System validates and processes based on selected type. Negative Scenario: 1. User selects an endorsement type but leaves required fields blank.	Must have.
MKTID.015 Previously ADJID.004	1	System	Types Non-Financial Endorsement 1. Descriptive Changes - free text which can be in relation to the assured information, person, risk or item insured, perils, coverage, extensions, warranties, clauses, deductibles, etc. 2. Change of Period Cover - moving the policy inception to an earlier date or a later date. Note: Term is not changed. 3. Extension of Period Covered - with change in both inception and expiry date (move cover with no financial impact)	Expected Result: 1. System supports all listed non-financial endorsement types with appropriate input fields and validations. 2. system allows Marketing to perform an update to include the non-financial endorsement changes. Acceptance Criteria: 1. Each type is selectable and triggers or accept flow-in relevant information. 2. System saves changes without affecting financials. 3. Internal adjustments are logged without Insurer involvement. Negative Scenario: 1. User inputs invalid date range for period change.	Must have.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.005	1	System	4. Extension of Cover - extensions of cover/clauses/warranties/deductibles are added but no premium will be charged. 5. Change of Assured Name (or other Assured information like address, birthdate & occupation. 6. Internal Adjustment for transactions without the need of an endorsement from Insurers. Facility to return transactions prior to batch posting. This is to check / verify those that are not qualified to be included in the batch posting of cancellation and adjustment.	Expected Result: 1. Users (Operations/Approver) can review transactions prior to batch posting and initiate return of transactions that do not meet validation requirements. 2. Returned transactions are excluded from batch posting, flagged for correction, routed back to Marketing for resolution. 3. Marketing is able to view returned transactions, review return reasons, perform necessary corrections and resubmit. 4. A reason for return can be optionally recorded. 5. Returned transactions are flagged for further review or correction. Acceptance Criteria: 1. The system allows Operations/Approver to select one or more transactions for return during validation. 2. The system enforces capture of return reason (mandatory or configurable) 3. Returned transactions are excluded from batch posting, tagged as "Returned", logged with timestamp and user 4. Returned transactions are automatically routed to Marketing as correction owner. 5. Marketing users can access and view returned transactions, perform updates prior to resubmission. 6. Marketing can modify returned transactions, re-submit transactions for validation	Must have.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
MKTID.016 Previously ADJID.007	1	System	Facility to return problematic cancellation and adjustment request. (e.g. incomplete, erroneous, or request with discrepancies).	7. System tracks original submission, return instance, and resubmission history (audit trail). 8. System maintains full traceability. Negative Scenario: 1. Mistakenly returns a compliant transaction. Expected result: 1. Operations/Approver initiated return of problematic requests (e.g. incomplete, erroneous, or with discrepancies). 2. Returned requests are sent back to Marketing for correction, marked with reason and status, and prevented from further processing until resolved 3. Marketing is responsible for reviewing returned requests, updating required details, and resubmitting for processing Acceptance Criteria: 1. The system allows Operations/Approver to flag and return problematic requests. 2. The system requires mandatory return reason 3. Upon return request is excluded from processing/posting and request is marked as "Returned" 4. The system sends notification to request originator (Marketing) 5. Returned requests are automatically routed to Marketing for correction 6. Marketing users can view returned request with reason, update incomplete or erroneous data, and re-submit request for validation 7. All return actions are logged, including details such as Return initiator (Operations/Approver). Return reason, Timestamp 8. System maintains full history of return and resubmission actions Negative Scenario: 1. Return fails due to missing reason. System allows return of already processed requests.	Must have.
MKTID.017 Previously	1	System	Financial Endorsement conditions under Extension of Cover.	Expected Result: 1. System allows extension of cover with additional premium, subject to approval.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.010			With additional premium which will be subject for approval.	Acceptance Criteria: 1. User can input new coverage dates. 2. System calculates additional premium. 3. Approval workflow is triggered before finalizing the endorsement. Negative Scenario: 1. User extends coverage but system does not calculate premium.	
ADJID.014	2	System	Compute or re-compute premium, commission, refund premium, and sum insured per Insurer based on endorsement type or changes made in the account. (e.g. Change of Total Sum Insured (TSI), Increase of TSI, Extension of Cover, Change in Premium Rate)	Expected result: 1. The system automatically triggers recalculation upon submission of a financial-impacting endorsement. 2. All financial values are recomputed using validated input parameters, ensuring consistency and accuracy across - Premium, Commission, Refund premium, and Sum insured per insurer 3. Recalculated values reflect the latest endorsed data and are aligned with accounting and posting outputs. 4. If recalculation impacts income or commission, the system generates a service invoice linked to the transaction. 5. All recalculations are logged and traceable for audit purposes. Acceptance Criteria: 1. Recalculation is automatically triggered upon submission of a financial endorsement. 2. The system computes values using validated inputs such as Effectivity date, Sum insured (SI / TSI), Premium rate, and Policy duration 3. The system recalculates (e.g. Premium, Commission, Refund premium (if applicable), Sum insured per insurer) 4. Computed values reflect latest endorsed data and replace previous values. 5. The system provides insurer-level breakdown based on defined share allocation. 6. A service invoice is generated if recalculation impacts income or commission. 7. Recalculation uses updated values only and prevents processing with incomplete or invalid inputs.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				8. All recalculation activities are logged with inputs, outputs, user, and timestamp. Negative Scenario: 1. Incorrect formula used for computation. 2. Missing Insurer configuration.	
MKTID.018 Previously ADIID.015	3	User	Generate an Endorsement Slip for external endorsements. Note: This is a Marketing activity.	Expected result: 1. User initiates generation of endorsement Slip. 2. System generates a formal endorsement slip for documentation and external use. 3. No Endorsement Slip is generated for Internal Adjustment. Acceptance Criteria: 1. Slip includes all required fields. 2. Available for download or print. 3. Unique slip number generated. Negative Scenario: 1. Missing data on slip. 2. Slip generated with incorrect endorsement details.	Must have.
ADIID.021	4	System	View aging of transactions based on submitted request date and completion date	Expected result: 1. System displays transaction aging for monitoring. 2. Users can view transaction aging reports showing time between request and completion. Use posting date as completion date Acceptance Criteria: 1. Aging calculated from request to completion date. 2. Sortable and filterable view. Negative Scenario: 1. Aging data not updated.	Must have.
ADIID.023	4	System	Facility to validate and send notification on duplicate transaction notifications based on endorsement reference number, reason, and request type.	Expected result: 1. System checks for duplicate endorsements based on reference number, reason, and type.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
MKTID.019 Previously ADJID.025	5	System	See Annex ADJID.023 Justification Capture & Validation Rules	2. System checks for duplicate endorsement requests and alerts the user. Acceptance Criteria: 1. Duplicate detection logic is applied. 2. User notified of potential duplicates. 3. Option to proceed or cancel. 4. Option to override with justification. Negative Scenario: 1. System allows duplicate submission without warning.	
			Capability to accept attachment for the supporting documents. Document being uploaded:	Expected result: 1. System allows users to upload and attach documents to endorsement requests. 2. Users can upload and attach supporting documents to endorsement requests. Acceptance Criteria: 1. Supported file types are accepted. 2. Attachments are linked to the transaction. 3. Upload confirmation is shown. Negative Scenario: 1. Upload fails due to size or format. 2. Attachment not linked to transaction. 3. File corrupted during upload.	Must have.

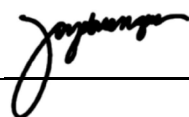

ANNEX**Approval**

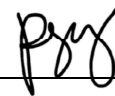

This document has been approved as the official Business Requirements Document for the OPERATIONS request.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase.

Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Annex

ADJID.023 Justification Capture & Validation Rules (as per meeting discussion)

A. Justification Capture

Scenario / Trigger Condition	Justification Required	Basis from Discussion
Adjustment exceeds baseline / allowable limit	Yes (implied)	System prompts when exceeding baseline Indicates exception handling requiring user input
Adjustment results in negative balance	Yes (implied)	System prompts when negative balance occurs High-risk condition → justification expected
Cumulative adjustments approaching/exceeding original premium	Yes (implied)	Cumulative tracking vs original premium discussed Control point for over-adjustment
Duplicate adjustment detected	Yes (if override allowed)	Duplicate adjustments must be flagged/blocked If not blocked, requires explanation
Standard/within-limit adjustment	✗ No	Normal transaction

B. Validation Rules

Validation Rule	Description	Expected System Behavior
Baseline Limit Validation	Adjustment must not exceed predefined allowable limit	System prompts or blocks when limit exceeded
Cumulative Adjustment Validation	Total adjustments must not exceed original premium/DTIP	System auto-totals and compares cumulative adjustments
Negative Balance Validation	Adjustment should not result in negative balance	System prompts or prevents submission
Duplicate Adjustment Validation	Same adjustment must not be processed more than once	System blocks or flags duplicate entries
Review of Previous Adjustments	Users must be able to view prior adjustments before adding new ones	System provides review mechanism prior to submission

C. Control Summary (Audit View)

Control Area	Rule	Control Objective
Exception Handling	Justification required for breaches (baseline, negative, duplicate)	Prevent unauthorized or unexplained adjustments
Data Integrity	Prevent duplicate adjustments	Avoid double counting / financial errors
Financial Control	Limit total adjustments vs original premium	Protect against over-adjustment
User Awareness	Provide review of prior adjustments	Ensure informed decision-making
System Enforcement	Prompt/block on invalid scenarios	Enforce compliance with rules

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

Collection of Commission Receivables (Direct Payments)

To design and implement a system-driven Commission Receivables module that ensures accurate, traceable, and end-to-end management of Direct Payment (DP) transactions, aligned with defined business rules, insurer agreements (SLA), and operational controls.

The solution shall leverage system-generated data and tagging (e.g., DP tagging from upstream processes) as the single source of truth, eliminating reliance on manual file uploads and ensuring consistency across processing, validation, and reporting.

The system shall support the following core capabilities:

1. Data Visibility and Validation Framework
 - Provide invoice-level visibility of DP entries derived from system tagging, including access to:
 - Production records
 - Historical commission movements and adjustments
 - Premium remittance and commission status
 - Ensure all data is presented in read-only mode for review and validation purposes, without performing system-driven computation, reconciliation, or modification.
2. Rule-Based Exclusion and Data Integrity
 - Apply strictly defined, configurable rule-based exclusion logic to identify and flag invalid entries
 - Ensure exclusions are based only on approved and documented criteria (e.g., negative entries, cancelled transactions)
 - Maintain full visibility and audit trail of excluded records, including reason and timestamp
 - Prevent reliance on undefined or subjective conditions (e.g., “erroneous booking” without formal definition)
3. Commission Receivables Processing and Classification
 - Consolidate data from internal systems and insurer sources to automatically compute commission receivables
 - Generate structured outputs for:
 - Billing
 - Statement of Account (SOA) preparation
 - Classify commission entries at the invoice level based on system tagging:
 - Priority / Direct Payment / Direct Bill
 - Regular Commission
 - Reflect accurate commission balances, including partial remittance scenarios

4. SLA-Driven Incentive Processing

- Determine incentive eligibility and compute incentive amounts per invoice using:
 - SLA-defined criteria
 - Configurable rates and multipliers
- Ensure the incentive engine is:
 - Generic and configurable (not tied to specific programs like Motor Mania)
 - Applicable across multiple insurer agreements and incentive structures
- Apply incentives only to entries that meet complete eligibility conditions (e.g., fully paid status, timing rules)

5. Processing Automation and Output Generation

- Automate end-to-end commission receivable processing, including:
 - Data consolidation
 - Commission computation
 - Output generation
- Produce structured, consistent outputs that support downstream activities such as:
 - Billing
 - Reconciliation
 - Reporting

6. Insurer Coordination and Status Management

- Enable end-to-end tracking of validation and billing lifecycle:
 - Sending validation/billing requests
 - Capturing insurer feedback (approval/rejection with reason)
 - Updating account status (Valid / Invalid / Returned)
- Maintain complete audit trail for:
 - Status changes
 - Validation results
 - Insurer responses
- Enforce use of standardized feedback reasons and ensure traceability across all transactions

7. Aging, Reporting, and Monitoring

- Provide invoice-level aging of commission receivables based on billing/SOA date
- Generate reports for:
 - Outstanding balances
 - Collection tracking and prioritization
 - Production insights per branch and insurer
- Ensure reports are complete, structured, and aligned with system data

8. Risk Mitigation and Control

- Ensure:
 - Only fully paid DP accounts proceed to billing
 - No duplicate or inconsistent entries are processed

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

- All processing is system-driven and traceable
- Address risks such as:
 - Incorrect classification
 - Invalid incentive calculation
 - Incomplete data consolidation

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
CMRID.001	1	System	Facility to access the files where Marketing—Collection Head Office and Branches identified Direct Payments (DP) transactions saved their DP list. Each folder is using a predefined file naming convention. Frequency: Integrate with Collection System	Expected Result: 1. All head office and branches submit DP lists consistently and on time, enabling centralized consolidation. 2. The DP tagging of Marketing Collection flow in to Commission Receivable module. 3. Handlers are able to generate the consolidated list (HO and Branches) of DP list as basis for billing. Acceptance Criteria: 1. Each head office and branch uploads a DP list on schedule. 2. File names follow the agreed file naming convention (e.g., BranchName_DP_YYYYMMDD). 3. Consolidation includes all submitted lists without duplication. Negative Scenario: 1. A head office or branch fails to submit its list. 2. File naming errors cause missed entries. 3. Duplicate entries across head office or branches are not flagged.	Must have.
CMRID.002	2	System	The system must provide a viewing capability for DP entries derived from system tagging, enabling users to review entries at the invoice level with access to related production	Expected Result: 1. The system displays DP entries derived from system tagging as the single source of data, without reliance on manual uploads.	Must have.

Business Requirements Document

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				c. Key identifying and financial details (e.g., policy number, invoice amount) d. Historical movements affecting the entry 6. The system supports viewing and checking only. 7. The system: a. Does not perform validation, reconciliation, or matching logic b. Does not compute, alter, or reprocess any data c. Does not automatically correct discrepancies 8. Users can identify: a. Missing or incomplete data b. Duplicate or inconsistent entries c. Status discrepancies (e.g., unpaid but expected paid) 9. The system may highlight or flag visible inconsistencies, but without applying system-level validation rules. Negative Scenario: 1. Premiums are not fully paid but still pass validation. 2. Commission already paid but listed again. 3. Missing or incorrect data (e.g., policy number, amount).	
CMRID.003	28	System	The system must apply rule-based exclusion to DP entries derived from system tagging to ensure that only valid entries are considered for downstream processing (e.g., billing, reporting, and incentive eligibility). Exclusion shall be strictly based on predefined and configurable criteria, with no reliance on subjective or undefined conditions. The system must identify and flag entries that meet the defined exclusion criteria while maintaining full visibility and traceability of excluded records.	Expected Result: 1. The system identifies DP entries that meet predefined exclusion criteria based on configured rules. 2. The system excludes only entries that satisfy explicitly defined and approved criteria. 3. The system provides clear visibility of excluded entries, including the reason for exclusion. 4. The system ensures excluded entries are removed from downstream processing (e.g., billing, reporting, incentive computation) where applicable.	Must have.

				5. The system maintains traceability of all excluded entries, ensuring they remain available for review and audit purposes. 6. The system applies exclusion using rule-based logic only and does not interpret or infer conditions such as 'erroneous booking' unless formally defined. Acceptance Criteria: 1. Exclusion rules are explicitly defined, approved, and configurable in the system. 2. Rules may be configured per applicable context (e.g., insurer agreement, SLA, or agreed business criteria). 3. The system identifies and excludes entries that meet defined criteria, including but not limited to: a. Negative amount entries b. Fully cancelled transactions c. Other approved rule-based criteria as defined in the annex 4. The system does not classify or exclude entries based on undefined terms (e.g., 'erroneous booking') unless supported by explicit rules. 5. The system does not perform assumption-based or user-subjective exclusion. 6. The system displays excluded entries along with the corresponding exclusion reason. 7. All excluded entries remain accessible for user review and audit. 8. The system maintains an audit trail of exclusion tagging, including rule applied and timestamp.

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: - Entries are not excluded due to missing or unclear rule definitions. - Valid entries are not incorrectly excluded due to ambiguous criteria. - Exclusion logic is not applied inconsistently across similar entries.	
CMRID.004	3 5 8		The system must generate commission receivable outputs that classify DP-related commission entries based on defined business categories to support accurate reporting and downstream processing (e.g., billing and SOA preparation). Each entry shall be clearly identified using system-derived classification, specifically as Priority / Direct Payment / Direct Bill] or Regular Commission (non-direct bill accounts), based on system tagging and source data. The system must present classification and related financial information at the invoice level, including the correct reflection of commission values after partial remittances, without performing comparison, reconciliation, or reclassification beyond source data.	Expected Result - The system generates commission receivable outputs using validated system data derived from DP-tagged entries. - Each commission entry is clearly classified based on system tagging into: - Direct Billed (Regular) - Direct Billed (Priority) - The system presents classification consistently across all outputs and reports. - The system reflects accurate invoice-level commission values, including: - Net commission after partial remittance - Remaining commission balance, where applicable - Classification and financial values are displayed clearly to support reporting, monitoring, and billing activities. Acceptance Criteria - The system classifies each commission entry as one of the following: - Direct Billed (Regular) - Direct Billed (Priority) - Classification is based solely on system tagging and source data.	Must have.

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CMRID.005	4	System	The system must determine incentive eligibility and compute incentive amounts per invoice based on predefined, configurable criteria from insurer Service Level Agreements (SLAs). Incentive logic must use applicable rates and multipliers defined in each insurer's SLA and must not rely on production targets or hard-coded program specifics, ensuring it works for any incentive program.	Expected Result: - Each invoice is evaluated for incentive eligibility using SLA-defined criteria (e.g., insurer rules, product type, fully paid status, timing within credit term). - Incentive amounts are computed per invoice using agreed rates and multipliers from the SLA, reflecting the exact terms of each insurer's agreement. - Only invoices meeting all eligibility conditions produce a computed incentive; ineligible invoices yield no incentive. - The system outputs a record of computed incentives (report or listing) for transparency and downstream use. Acceptance Criteria: - The system uses SLA-derived, configurable criteria (product, policy attributes, etc.) to evaluate each invoice's incentive eligibility. - For each invoice, the system confirms it is fully paid and within any allowed time frame (credit term) before calculating an incentive. - For eligible invoices, the system applies the corresponding SLA-defined incentive rate or fixed amount, using the correct multipliers as specified. - Incentive rules and parameters are fully configurable (not hard-coded to a specific program) to support different incentive programs and criteria changes. - The system produces an output/log of all incentive calculations, clearly showing each eligible invoice and its computed incentive amount for review and audit. Negative Scenario:	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Incentive erroneously given for an invoice that is not fully paid or outside the allowed time window. - Incentive calculated using incorrect criteria (e.g., inadvertently based on production volume or target). - Wrong rate or multiplier applied due to misconfiguration. - An eligible invoice fails to get an incentive due to missing or incorrect rule configuration.	
CMRID.006	4	System	The system must support configurable incentive programs that apply defined incentive structures per policy or invoice based on pre-established criteria derived from insurer agreements (SLA/program setup). The incentive logic must be generic and flexible, enabling implementation of multiple incentive programs without reliance on hardcoded program names or structures. Eligibility and application must be governed by SLA-defined conditions including product, period, branch, and marketing unit.	Expected Result: - The system supports multiple incentive programs defined through configurable criteria and parameters (not limited to a single program such as “Motor Mania”). - Incentive programs apply defined structures (e.g., fixed amount or configured values) per policy or invoice based on SLA/program setup. - The system evaluates each entry using defined eligibility criteria, including: Product, Period, Branch, Marketing unit - The system automatically applies incentives to qualified entries only, based on configured rules such as minimum premium or other SLA-defined conditions. - The system ensures that only entries meeting all defined criteria receive incentives. - Incentive program scope and structure (e.g., applicability, duration) remain flexible and configurable. Acceptance Criteria: - The system allows definition and maintenance of multiple incentive programs using configurable parameters.	Must have.

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Program setup is based on SLA/program-derived criteria, not hardcoded logic. - The system evaluates each policy or invoice using configured eligibility rules. - The system automatically applies incentive values to eligible entries only. - Incentive values are derived from Program configuration or SLA-defined parameters Negative Scenario: - Incentive is applied to entries that do not meet eligibility criteria. - Incentive is applied outside defined scope (incorrect product, period, or organizational unit). - Incorrect incentive amount is applied due to misconfiguration. - Eligible entries do not receive incentives due to missing or incorrect setup.	
CMRID.007	3 5 8	System	The system must automate commission receivable processing by consolidating data from relevant sources and computing commission receivable amounts. The system must generate structured outputs for billing and reporting, including outputs usable for Statement of Account (SOA) preparation, while minimizing or eliminating manual intervention and ensuring data consistency and accuracy.	Expected Result: - The system consolidates data from multiple sources (e.g., system-generated records and insurer data) into a single dataset for processing. - The system automatically computes commission receivable amounts based on consolidated data. - The system generates commission receivable outputs for downstream use. - Outputs can be grouped or organized per insurer, supporting billing and reconciliation. - Outputs are produced in a structured format suitable for reporting and operational use.	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				6. The process is automated, reducing or eliminating manual consolidation and computation. Acceptance Criteria: 1. The system consolidates data from source such as Internal system records (e.g., production, DP-tagged entries), Insurer-related data. 2. The system automatically computes commission receivable amounts using consolidated data. Computation does not require manual intervention. 3. The system generates outputs suitable for Billing, SOA preparation. 4. Outputs may be grouped by insurer or structured based on operational requirements. 5. Outputs can be generated on a defined schedule or on-demand. Negative Scenario: 1. System fails to consolidate all required data sources. 2. Commission receivable calculations are incorrect due to incomplete or inconsistent data. 3. Outputs are missing entries or incorrectly grouped. 4. Outputs are not aligned with source data. 5. Manual intervention is still required due to incomplete automation. 6. Duplicate or inconsistent data leads to incorrect computation.	
CMRID.008	6	System	The system must provide a capability to update and track the status of DP accounts based on validation results and insurer feedback, including classification of accounts as valid	Expected Result 1. The system updates DP account status e.g. based on validation results, Insurer feedback (approval / rejection).	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

			or invalid/returned, maintenance of audit trails, and capture 2. of standardized feedback reasons.	2. The system classifies accounts (i.e.Valid (proceed for billing/payment), or Invalid / Returned (requires correction or review). 3. The system ensure status updates are derived from system validation and insurer response. 4. The system maintains a complete audit trail for status changes, rejected / returned accounts, Validation results, Insurer feedback. 5. The system captures standardized feedback reasons using predefined values and provides visibility of account status and history. 6. The system supports end-to-end validation coordination, including: a. Sending validation requests. b. Receiving and recording insurer responses. c. Tracking response status within the system. Acceptance Criteria 1. System updates DP account status e.g. based on validation results, and/or Insurer response (approval / rejection) 2. System uses DP-tagged entries from upstream processes (e.g., Marketing/Collection). 3. System maintains a complete audit trail. 4. For all invalid/returned accounts. system requires selection of predefined feedback reason (dropdown list). 5. System enforces classification i.e. Valid → proceeds to billing, Invalid / Returned → requires correction 6. Feedback must be captured before finalizing status and stored for audit and reporting Negative Scenario:

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- System fails to update status based on validation results or insurer feedback. - Status is assigned without supporting validation or insurer response. - Insurer feedback is not captured or not linked to the correct account. - Validation requests are sent but responses are not tracked or recorded. - Audit trail is incomplete or missing for status changes. - Feedback reasons are not selected or inconsistently applied. - Accounts are incorrectly classified (e.g., invalid marked as valid). - Manual updates override system-driven validation without traceability.	
CMRID.009	6	System	Facility to sort validated accounts by insurer and assigned to handlers for billing. Insurers must respond with either approval or rejection and reason.	Expected Result - Validated DPs are billed to insurers and monitored for response. - Insurers respond with either approval or rejection and reason. Acceptance Criteria - Handlers prepare and send billing within SLA. - Files are password protected. - Insurer responses are logged and categorized. - Facility to upload file from Insurer. - Valid accounts proceed to payment; invalid ones are returned with reason. - Flow-in to Collection System returned accounts with time stamp and reason. Negative Scenario:	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Billing sent to wrong Insurer. - No response from insurer within expected time. - Returned entries lack feedback reason.	
CMRID.010	6		System must track OR numbers and amounts, BIR certificate submissions, withholding tax, and all insurer feedback.	Expected Result: - System tracks all payment proofs, tax documents, and insurer feedback. - Complete audit trail and reporting of all financial and feedback data. Acceptance Criteria - OR numbers and amounts are logged. - BIR certificates and withholding tax submissions are tracked. - All insurer feedback is recorded and reportable. Negative Scenario: - Missing OR documentation. - BIR certificates not submitted. - Feedback from insurers not logged or lost.	Must have.
CMRID.011	7	System	The system must provide commission receivable aging visibility by tracking outstanding receivables at the invoice level. Aging must be calculated based on the billing date or Statement of Account (SOA) date, enabling monitoring of receivables over time and supporting collection tracking and prioritization.	Expected Result: - The system calculates aging of commission receivables at the invoice level. - Aging is derived using Billing date, or SOA date as the reference point - The system provides visibility of outstanding receivables per invoice over time - Users are able to monitor delays in collection. - Users are able to identify aged receivables requiring follow-up.	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				6. The system supports tracking of outstanding balances to enable prioritization of collection activities . Acceptance Criteria: 1. The system tracks commission receivable aging at the invoice level. 2. Aging is computed based on Billing date, or SOA date. 3. The system displays outstanding receivables per invoice and its corresponding aging values. 4. Users can view aging progression over time per invoice. Negative Scenario: 1. Aging is not calculated at the invoice level. 2. Aging is not based on billing/SOA date. 3. Outstanding receivables are incorrectly reflected. 4. Aging information is missing, incomplete, or inconsistent. 5. System incorrectly uses timeline tracking instead of aging logic.	
CMRID-012		System	Automate coordination with insurers for validation	Expected Result: System automatically sends validation requests and tracks responses Acceptance Criteria: Validation requests are logged and responses are received systematically Negative Scenario: Manual coordination leads to missed or delayed validations	Must have:
CMRID.013	28	System	The system must ensure that only eligible DP (Direct Payment) accounts proceed to billing by validating that accounts are confirmed as fully paid based on upstream	Expected Result 1. The system validates DP accounts using upstream PR tagging data, including confirmation of “fully paid” status.	Must have.

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			data (PR module) and filtering out entries that do not meet the defined criteria. The system shall: 7. Identify eligible accounts based on confirmed payment status 8. Ensure that only fully paid DP accounts are allowed to proceed to billing 9. Maintain data integrity by applying rule-based validation and sanitation 10. Support traceability of eligibility decisions through system-recognized source data	2. The system ensures that only confirmed fully paid DP accounts are eligible for billing. 3. The system filters out: a. Accounts that are not confirmed as fully paid b. Accounts that do not meet eligibility criteria (based on defined rules) 4. The system ensures: a. Eligibility determination is system-driven, not manually inferred b. Validation is based on available and defined data fields (e.g., payment confirmation) 5. The system maintains: a. Visibility of eligible vs non-eligible accounts b. Traceability of how eligibility was determined Acceptance Criteria 1. System identifies DP accounts eligible for billing based on confirmed fully paid status from PR module, 2. Only accounts meeting this condition can proceed to billing. 3. System uses PR tagging / upstream system data as the authoritative source of payment status. 4. System must not determine “fully paid” independently without source data. Negative Scenario: 1. Account is not fully paid but is allowed to proceed to billing. 2. Fully paid account is incorrectly excluded from billing. 3. System cannot determine eligibility due to missing or incomplete upstream data.	

Business Requirements Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

OPERATIONS

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Eligibility is determined without reference to PR tagging or source system. 5. Accounts proceed to billing without validation of payment status. 6. Manual intervention overrides eligibility without audit trail. 7. Inconsistent identification of “fully paid” status across accounts. 8. Missing linkage between PR data and commission receivable processing.	
CMRID.014	7	System	Generate production reports per branch and insurance company with consolidated yearly data.	Expected Result: System generates accurate and comprehensive production reports by branch and insurer. Acceptance Criteria: Reports include total production. Negative Scenario: Reports missing data from certain branches or insurers, leading to incomplete analysis.	Must have.
CMRID.015		System	Automated tracking and sending of BIR Withholding Tax Certificates. Currently, the submission of BIR withholding tax certificates from insurance companies is done manually, with transmittals acknowledged by Comptrollership through hardcopies. This process is prone to oversight and reconciliation issues. The proposed enhancement involves creating a system module that allows users to tag and submit BIR certificates linked to Official Receipts (ORs), enabling automated tracking and acknowledgment by Comptrollership.	Expected Result: 1. System allows Users to: a. Select ORs issued by the cashier. b. Tag corresponding BIR withholding tax certificates. c. Submit these digitally to Comptrollership. 2. The system logs submission dates and acknowledgment status. 3. Comptrollership can view, acknowledge, and track submissions within the system. 4. Scanned copies of hardcopy documents can be uploaded and stored for reference. Negative Scenario: 1. The system prevents submission if no OR is linked.	Must have.

			same invoice or account to ensure commission recovery is not missed.		
MKTID.011		System	During quotation creation and conversion to policy, the system allows tagging of DP (Direct Payment).	Expected Results: Direct Billed / Direct Payments - Accounts tagged as DP are correctly reflected in the invoice and payment modules. - Payments are processed and matched against the correct invoice. Acceptance Criteria: - DP checkbox is ticked during quotation or policy creation - Invoice reflects direct payment status	Must have.
MKTID.012		System	Facility to perform DP reversal only after validated DP tagging done by the Marketing team and successful collection of commission receivables to ensure accurate financial records and reduce manual errors in commission and premium reversals.	Expected Results: - The system should only trigger PR reversal when: - A valid DP tag is applied by the Marketing team. - The tagged entry flows into the Commission Receivable module. - The collection is confirmed and the schedule is uploaded. - The reversal should auto-match with the correct commission or premium portion. - Manual intervention and reliance on common files should be eliminated. Acceptance Criteria: - Then the system should validate the tag before it flows into the Commission Receivable module. - If valid DP tag and confirmed collection, the system should auto-reverse. - The system must log all reversal actions with timestamps. - If the DP tag is missing or invalid, the system should not proceed with reversal and must notify the user. - The system must eliminate the need for manual file uploads.	Must have.

Hi Shellah and Zei,

Please see attached signed BRD.

As a note, please ensure the system's Audit Trail complies with IT's audit trail requirement. At the minimum, below information should be captured in the system's audit trail:

- Name of user that initiated the activity
- Event Type (Create, Edit, Delete, etc)
- System Module affected/accessed
- From and To values for the Event Type
- Origin of the event (computer or system details that accessed the system like IP, MAC address, terminal ID or other equivalent location information)
- Date and Time of the event
- Success or Failure indicator of the event

Thanks

Jose Melvin M. Jarin

Subject: FOR REVIEW/SIGN-OFF: BRD for Operations: PR 2307 | Core Modernization

Dear Team,

I am sending the updated BRD addendum reflecting the recent changes to the PR 2307 process, including the removal of cashiering from certificate handing and the addition of outstanding commission receivable checks.

[BRD - OpsCentral_Addendum_Workshop.pdf](#)

Meeting Minutes for BRD Operations_UPDATED 04212026.docx

Kindly review the attached document and provide your sign-off by April 22, 2026 (Wednesday) to ensure timely project progression. Please let me know if you have any questions or require further clarification.

Impacted Business Requirement IDs

The Addendum specifically refines the following approved requirements:

- MKTID.010 – BIR 2307 handling and reversal determination logic
- MKTID.012 – Direct Payment (DP) reversal automation with strict preconditions
- MKTID.013 – Marketing tagging, validation, and reference number generation
- DBMID.001 – Disbursement validation, posting, and release controls

Deleted

- CSBHD.026 – Cashiering processing sequence for BIR 2307 transactions
- CSBHD.027 – Controlled reversal handling with remittance bypass

Thank you for your cooperation.

Best regards,

ZEAN C. IBAY

Subject: FOR SIGN-OFF: BRD for Operations: PR 2307 | Core Modernization

Dear Team,

Good day,

We are seeking your support and email sign-off/approval for the **Operations Central BRD – Addendum (BRD - OpsCentral Addendum Workshop.pdf)** to formally document refinements agreed during requirements workshops.

In accordance with SDLC guidelines, updates identified after the BRD walkthrough are managed through a **controlled Addendum** rather than re-issuing and re-routing the entire BRD. This approach ensures that specific changes and clarifications are clearly documented, traceable, and formally acknowledged through a focused sign-off, while maintaining the validity of the originally approved BRD. *Where applicable, agreements captured in the Minutes of Meeting (MofM) serve as official documentation of the agreements.* This method streamlines approvals, avoids redundancy, and preserves compliance and audit integrity.

Importantly, this Addendum **does not introduce new scope or functionality**. Its purpose is to translate previously implicit assumptions into **explicit, system-enforced rules**, addressing audit, risk, and implementation gaps surfaced during detailed discussions.

Impacted Business Requirement IDs

The Addendum specifically refines the following approved requirements:

- **MKTID.010** – BIR 2307 handling and reversal determination logic
- **MKTID.012** – Direct Payment (DP) reversal automation with strict preconditions

- **MKTID.013** – Marketing tagging, validation, and reference number generation
- **CSHD.026** – Cashiering processing sequence for BIR 2307 transactions
- **DBMID.001** – Disbursement validation, posting, and release controls

Deleted

- **CSHD.027** – Controlled reversal handling with remittance bypass

- Key Outcomes of the Addendum**
- Clear segregation of duties across Marketing, Cashiering, and Disbursement
 - Mandatory system decision logic and validation, reducing reliance on manual judgment
 - Enhanced audit trail, traceability, and failure-handling scenarios
 - Elimination of manual workarounds and file-based reversals

Thank you for your continued support.

Best regards,

ZEAN C. IBAY

Subject: Re: BRD for Operations: PR 2307 | Core Modernization

Good morning, Ms. @Zean C. Ibay.

Looking at the PR 2307 requirements across various BRDs, it seems that the existing process will be the same:

- Step 1: Marketing Collections will tag the PR 2307 for reversal
Step 2: Tagged accounts will flow to Cashiering for reversal
Step 3: Cashiering will trigger the reversal and route to Disbursement
Step 4: Disbursement will release the PR 2307 certificates to Insurers

I thought, this process will be changed so that Cashiering will no longer trigger the PR 2307 reversal.
From what I understand, this will be the process:
Step 1: Marketing Collections will tag the PR 2307 for reversal . System will automatically reverse the PR 2307 transactions. Entry will be posted once reversal is done.
Debit: PR 2307
Credit: PR

Step 2: Disbursement will release the PR 2307 certificates to Insurers. Upon tag of release of PR 2307 certificates, entries should be
Debit: DTIP
Credit: PR 2307

As discussed by Sir Rod dela Cruz during gap discussion with Comptrollership, the recommended process should be
Step 1: Marketing Collections will tag the PR 2307 for reversal . System will automatically reverse the PR 2307 transactions. Entry will be posted once reversal is done.
Debit: DTIP
Credit: PR
Step 2: Disbursement will release the PR 2307 certificates to Insurers. No entries will be generated.

These discussions are not reflected in the addendum BRD for Collection.

Please inform us which of the above processes for PR 2307 processing should we follow.

From Collections - Addendum BRD

Business Requirements Document

COLLECTIONS

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.026	FRID-026	Batch Processing	The system should have a monthly batch process to generate file with disposition 'PR 2307 for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM
BRCLXN.027	FRID-027	File Generation	The auto-generated PR 2307 For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month
BRDTIP.028	EDIT.028	Batch Disbursement	The system should have a batch process to auto-generate as of and of Friday

From Operations - Cashiering BRD

Requirement are needed for Cashiering.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As «Persona», I must be able to					
MKTID.013		Marketing	Facility to tag Reversal Transactions for BIR 2307 and submit certificates received from clients. Processing that will flow-in to Cashiering.	Expected Result / Acceptance Criteria: 1. Reference numbers are generated and stored during reversal tagging. 2. Tagged transactions are accessible to Cashiering via reference number. 3. Data encoded is complete and accurate for validation.	Must have.
DBMID.001		Disbursement	Receive and process BIR 2307 Report. Receive sorted BIR 2307 certificates and supporting documents from Cashiering to be able to complete the financial posting and ensure Premium Receivable is zeroed out with correct accounting entries.	Expected Result / Acceptance Criteria: 1. Processed BIR certificate transactions are received from Cashiering. 2. BIR 2307 reports are received per insurer. 3. Certificates are sorted and complete. Supporting documents are complete and attached. 4. System reflects correct accounting entries i.e., - Debit PR2307, Credit PR or Debit DTIP, Credit PR2307 5. DTIP is reversed correctly in the system. 6. Release to insurers.	Must have.

CSHD.027		System	Facility to provide capability to Operations to process BIR 2307 reversals using reference numbers generated by Marketing. This is to validate the data, generate the transaction report, and route it directly to Disbursement without going through the Remittance function.	Expected Result: 1. The system allows the Cashiering to process BIR 2307 reversals using reference numbers generated form Marketing. 2. A BIR 2307 transaction report is generated, posted, and routed to Disbursement. 3. The Premium Receivable is zeroed out and appropriate accounting entries are created. 4. The process bypasses the Remittance function. Acceptance Criteria:	Must have.

Subject: BRD for Operations: PR 2307 | Core Modernization

Good afternoon, Ms. [@Zean C. Ibay](#),
We were informed that there will be no addendum BRD for Operations. With this, we would to inquire which addendum BRD does the PR 2307 process changes will be included.

If my understanding is correct, Cashiering recommended Marketing to tag the PR 2307. Tagging will then trigger the automated reversal. This will impact the accounting entries (Acceptance #8).

CSHD.027		System	Facility to provide capability to Operations to process BIR 2307 reversals using reference numbers generated by Marketing. This is to validate the data, generate the transaction report, and route it directly to Disbursement without going through the Remittance function.	Expected Result: 1. The system allows the Cashiering to process BIR 2307 reversals using reference numbers generated from Marketing. 2. A BIR 2307 transaction report is generated, posted, and routed to Disbursement. 3. The Premium Receivable is zeroed out and appropriate accounting entries are created. 4. The process bypasses the Remittance function. Acceptance Criteria:	Must have.
----------	--	--------	--	---	------------

				1. User can input a reference number generated during Marketing reversal tagging. 2. System displays reversal details upon valid input. 3. User can validate batch details against received CWT copies. 4. System generates a BIR 2307 transaction report after validation. Report is printable and ready for posting. 5. Report is posted and routed directly to Disbursement. 6. BIR certificates are sorted per insurer and forwarded. 7. Premium Receivable is zeroed out. 8. System creates correct accounting entries i.e., Debit PR2307, Credit PR or Debit DTIP, Credit PR2307. 9. User can attach supporting documents to the 2307 report.	
--	--	--	--	---	--

I am not sure if there are other discussions I missed regarding this.
Will wait for your feedback.
Thank you.
Abby

OPERATIONS CENTRAL - ADDENDUM¹

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Business Requirements Document (BRD)

Prepared by: Zean C. Ibay

Enterprise Services Group - Business Project Services

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Business Needs and Requirements

I. Executive Summary (What do you need?)

This initiative introduces a unified and system-driven platform that integrates critical BDOI Operations: Cashiering (Payments Acceptance and Application), Remittance, Production Reconciliation, Adjustment/Cancellation, and Collection of Commission Receivables (Direct Payment). The goal is to streamline workflows, automate key processes, and enhance accuracy, transparency, and auditability across all financial transactions. By consolidating these capabilities into a single system, the organization will significantly reduce manual workload, improve turnaround times, and ensure compliance with financial standards.

Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement *(attach the related law being addressed)*
- ☐ Customer Experience
- ☒ Others:

1. Unify BDOI Operations by integrating Cashiering (Payments Acceptance and Application), Remittance, Reconciliation, and Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment) workflows into a centralized system. This will be further integrated to the other systems where Operations receives or send data.
2. Automate key processes by reducing manual intervention through scheduled extractions, auto-matching, and batch processing.
3. Ensure financial accuracy by generating validated accounting entries and support audit requirements through system facility to perform computations and validations.
4. Enhance transparency and control by providing real-time tracking, search capabilities, and comprehensive reporting.
5. Support scalability and compliance by building a system that adapts to growing transaction volumes and regulatory standards.

b. Benefits

1. Automation across all modules reduces processing time and human error and ensures operational efficiency.
2. Improved accuracy and data integrity due to the validations, auto-matching, and audit trails.
3. Intuitive interfaces for transaction management, document uploads, and reporting.

4. comprehensive visibility due to real-time tracking and reporting across BDOI Operations and to systems it integrates with.
5. Detailed logs, validation slips, reconciliation summaries support internal and external audits, and regulatory compliance.
6. To address technology support and obsolescence.
7. To improve application accessibility through BDO's local network via browser-based implementation
8. To upgrade infrastructure portfolio for BDO to ensure efficiency and availability.
9. To conduct a business process review, capturing current business requirement and identify streamlining opportunities
10. To provide a system much more suitable for today's BDO insurance brokerage needs.

II. What is the current process? (Before)

1. Manual issuance of receipts, limited data in the reports for validation, payments details are not visible, and fragmented payment application.
2. Manual extraction and no tracking of remittance batches, having no facility to validate and identify those that are not for Remittance, and feedback integration.
3. Manual matching of booked accounts with Insurer reports, manual checking into unmatched items.
4. The current process includes several steps that have become redundant or unnecessary over time for the handling of financial and non-financial endorsements, manual computation, and limited traceability.
5. Dependency with IT Group to provide timely, correct and complete report.
6. Manual process of commission receivables from data gathering, sanitation and billing to insurer.

III. What is the envisioned process? (After)

1. Cashiering (Payments Acceptance and Application)

The Cashiering (Payments Acceptance and Application) is designed to deliver a seamless, automated, transparent financial transaction experience, ensuring that payment sources details are reflected. It enables efficient management of Acknowledgment and Official Receipts (AR/OR), with automated numbering and validation to ensure accuracy and compliance.

Supporting a wide range of payment types, the system ensures accurate currency handling and foreign exchange support. Payments may be applied manually or automatically, with full traceability.

Advanced search capabilities, audit trails, and intelligent error handling enhance User experience and accountability. Payments are matched to insurance entries during acceptance and categorized for clarity, while reporting tools offer aging, filtering, and Insurer-specific insights.

Automated journal entries and reconciliation features uphold accounting integrity, with built-in mechanisms to address minor discrepancies. Overall, the system drives operational efficiency, reduces manual errors, and provides real-time financial visibility.

2. Remittance

The Remittance process is designed to automate and streamline the extraction, validation, and tracking of remittance transactions across Insurers and remittance types. It ensures only valid, applied, and posted payments are extracted - excluding on-hold accounts - and assigns unique batch references for traceability.

Remittance data is extracted on schedule or manually by invoice, grouped by type, processor, and Insurer. Users can manage batches through submission, hold, or return actions, and generate remittance schedules and payment requests. The system facilitates Insurer coordination by exchanging OR details and supporting file uploads for OR updates.

Built-in validations ensure alignment with outstanding balances, while search and workflow tools support efficient tracking, approvals, and notifications. The full remittance lifecycle is monitored to ensure transparency, control, and operational efficiency.

3. Production Reconciliation

The Production Reconciliation automates and standardizes the reconciliation of booked and unbooked accounts across Insurers, ensuring accuracy and operational efficiency. It supports scheduled and manual data extraction, with secure, editable files and system-generated documentation for traceability.

Users receive notifications upon extraction, and uploaded Insurer reports are automatically matched against system data using key fields with built-in discrepancy tolerance. Accounts are categorized as matched, unmatched, or matched with discrepancies, with duplicate uploads blocked and tracked.

Advanced filtering and editable fields support tailored reconciliation, while a centralized repository maintains unmatched and duplicate records for audit and resolution. The system

generates comprehensive outputs - including summaries, feedback reports, and unmatched account lists - providing full visibility across the reconciliation lifecycle.

4. Adjustment/Cancellation

The Adjustment/Cancellation provides a flexible, accurate, and auditable framework for managing financial and non-financial changes to booked. It supports single and batch transactions, with automated accounting entries and intelligent handling of cancellations, adjustments, and excess payments.

Users can monitor transaction aging, generate endorsement slips, and access comprehensive reports. The system ensures traceability through unique reference numbers and full history tracking, while validations prevent duplicates and maintain data integrity.

Advanced search and document upload features support efficient processing, and all transactions are linked to original account references for transparency and control. Overall, the system enhances operational efficiency and ensures consistent, compliant endorsement management.

5. Collection of Commission Receivables (Direct Payment)

The Collection of Commission Receivables (Direct Payment) is designed to streamline the end-to-end process of calculating, validating, and reporting commissions. It ensures accuracy, compliance, and efficiency by automating complex commission structures, validating production data, and facilitating seamless coordination with insurers. The system supports both fixed and performance-based commission schemes, while also generating comprehensive reports for strategic decision-making.

The Collection of Commission Receivables (Direct Payment) focus on the proper handling of direct payments, and the ability to reverse related commission entries. This functionality is critical for maintaining traceability and compliance, and requires close collaboration with the Collection Marketing.

Additionally, this incorporates robust audit trail capabilities and aligns with regulatory standards.

NOTE: Each of these key functionalities will be supported by detailed business requirements, which will be defined in subsequent documentation to ensure clarity, alignment, and successful implementation.

IV. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRQID (ex: Key capability 1 should match with all BRQID1.#)

Business Key Capabilities:

1. Cashiering (Payments Acceptance and Application)
 - a. Receipt Issuance & Management
 - b. Search & Audit Trail
 - c. Validation & Error Handling
 - d. Reporting & Monitoring
 - e. Unapplied Payment & GL Integration
2. Remittance
 - a. Extraction & Remittance Processing
 - b. Sending and Uploading of File
 - c. Validation & Filtering Criteria
 - d. Search & View Capabilities
 - e. Hold Remittance Management
 - f. Notifications & Tracking
3. Production Reconciliation
 - a. Data Extraction & File Management
 - b. Production Register, Viewing & Filtering
 - c. Matching & Automation
 - d. Tracking & Monitoring
 - e. Reports Generation
4. Adjustment / Cancellation
 - a. Endorsement Transaction Management
 - b. Financial Computation & Accounting Entries
 - c. Documentation & Reporting
 - d. Search, Traceability & History
 - e. Attachment & Supporting Documents
5. Collection Commission Receivables (Direct Payment)
 - a. Automated Incentive Calculation for Retail and Corporate for Top up and CBG motor for No touch.
 - b. Motor Mania Incentive Plan Implementation
 - c. Production Data Validation and Exclusion Handling
 - d. Automated Commission Receivables Processing
 - e. Insurer Coordination and Feedback Tracking
 - f. Comprehensive Production Reporting
 - g. Risk Mitigation and Error Handling

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Business Requirements

Business Requirements					
BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.001	1	Operations	Access and log-in to the system.	Expected Result: Credential entered correctly. Acceptance Criteria: Able to access the system. Negative Scenario: System denies access.	Must have.
BRQID.002	2	System	Restrict access to authorized users so that only authorized personnel can access the system.	Expected Result: 1. Secure access control. Acceptance Criteria: 1. Only authorized users can log in. 2. Users must enter a valid credentials. 3. The system should deny access if the credentials are incorrect. Negative Scenario 1. Cannot log in to the system. 2. Unauthorized users attempt to access the system.	Must have.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.003	3	Operations	Upon successful login, the system must immediately present the User with access to the Operations functionality, displayed prominently on the dashboard. The User must be able to select and view specific operational sections based on their role, preference, or task at hand. The system must ensure intuitive navigation, allowing users to switch between sections efficiently, with each section offering its full suite of functionalities, validations, reporting tools, ability to open a link to applications it integrates with.	Expected Result: Upon successful login: 1. The User is immediately presented with the Operations functionality on the dashboard. 2. The Operations section is prominently displayed and easily accessible. 3. Users can select and view specific operational sections based on their role, preference, or task. 4. Navigation between sections is intuitive and efficient. 5. Each section includes: a. Full suite of functionalities b. Validations c. Reporting tools d. Links to integrated applications Acceptance Criteria: 1. Operations functionality is visible and accessible immediately after login. 2. Users only see operational sections relevant to their role. Role-based permissions are enforced. 3. Users can customize or filter operational sections based on preferences or tasks. 4. Users can switch between sections. 5. Navigation and loading of sections occur within acceptable time limits (e.g., <5 seconds). Negative Scenario 1. User logs in successfully but Operations functionality is missing or not visible. 2. A User sees operational sections not intended for their role. 3. Clicking on a section leads to an error or blank page. 4. A section loads but lacks reporting tools or links to integrated applications.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.004	4	System	Integrate with other systems / applications / modules to fetch or flow-in data. (i.e. Collection, Accounting, Disbursement, Marketing, Claims).	Expected Result: System successfully integrates with external systems (Collection, Accounting, Disbursement, Marketing, Claims). Acceptance Criteria: 1. Integration endpoints are established and tested for each external system. Negative Scenario: 1. Integration fails due to incorrect endpoint configuration or network issues.	Must have.
BRQID.005	5	System	Facility to fetch from other systems / applications / modules the necessary data that are required to flow-in to support Operations processes.	Expected Result: System automatically fetches relevant operational data in real-time or at scheduled intervals. Acceptance Criteria: 1. Data fetched includes all required fields to support operations (e.g., transaction details, claim status, marketing feedback). 2. Data is validated and correctly mapped to internal formats. 3. Fetching occurs without manual intervention, either on-demand or via scheduled jobs. 4. Logs are maintained for each data fetch operation, including timestamps and status. 5. System alerts users in case of failed data fetch or mismatched data. Negative Scenario: 1. Data fetched is incomplete, outdated, or incorrectly mapped. 2. System does not alert users when data fetch fails. 3. Duplicate or corrupted data is introduced into operational workflows. 4. Fetching from one or more systems is delayed, causing operational bottlenecks.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.006	6	System	Implement a batch job processing system that continues execution even if one or more records encounter errors during processing. The system must log failed records for future evaluation and potential reprocessing. Additionally, generate a comprehensive report summarizing the outcome of the batch run.	Expected Result: 1. The batch job processes all records in the input set. 2. Records that fail validation or processing are skipped, and the job continues with the remaining records. 3. Failed records are logged and compiled into a separate list for review. 4. A report is generated at the end of the batch run, detailing: a. Successful uploads b. Unsuccessful uploads c. Applied records d. Unapplied records e. Unsuccessful records Acceptance Criteria: 1. The batch job does not terminate when a record fails. 2. All valid records are processed successfully. 3. Failed records are captured with relevant error messages. 4. Failed records are stored in a separate log or database table. 5. A report is generated post-run with the following sections: a. Count and list of successfully uploaded records. b. Count and list of unsuccessfully uploaded records. c. Count and list of applied records. d. Count and list of unapplied records. e. Count and list of unsuccessful records. 6. The system allows for the failed records to be reviewed and optionally reprocessed.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario 1. A record in the batch contains invalid data (e.g., missing required fields or incorrect format). 2. The job encounters an error while processing this record. 3. Instead of stopping, the job logs the error, skips the record, and continues processing the remaining records. 4. The failed record appears in the "Unsuccessful" section of the report with a detailed error message.	

CASHIERING (Payments Acceptance and Application)

Cashiering (Payments Acceptance and Application)

To establish an efficient receipting and payment application system that ensures accurate and timely processing of payments, issuance of acknowledgment and official receipts, and comprehensive visibility into payment-related tasks.

1. Receipt Issuance & Management

- a. Enable creation, cancellation, and reinstatement of Acknowledgment Receipts (AR) and Official Receipts (OR).
- b. Auto-assign AR/OR numbers per transaction based on branch.
- c. Ensure system validation for AR/OR series depletion before transaction processing.
- d. Receipts reflects the received currency. Receipting will follow the received currency.
- e. Receipt issuance for commission and premium and non-premium payments.
- f. OR issuance for commission deducted from for remittance. There should be one OR per settlement batch per Insurer.
- g. Support multiple check details per official receipt as long as one Insurer / Payee (one certificate).
- h. For AR - Allow uploads for Bills, Trade, CLPC payments, matured PDC, Direct Credit (Batch processing).
- i. For OR - Service Fee Income, Insurance Profit Share, Commissions, Incentives, Others (discount).
- j. Support manual and auto payment application for premium payment application. If manual application - be able to apply one payment not only to one invoice but to various invoices
- k. Auto-generate transaction number for payment application reinstatement.

2. Search & Audit Trail

- a. Search facility by:
 - AR Number
 - OR Number
 - Client Number
 - Invoice Number
 - Payor Name
 - Assured Name
 - Amount
 - Date of Issuance
 - Policy Number
 - Insurer Name
- b. Audit Trail based on AR number and UserName.

3. Validation & Error Handling

- a. Validate and process Bills Payment files with required fields.
- b. Display clear error messages and prompt users for corrective actions.
- c. Match payments against booked, pre-booked, and AR insurance.
- d. Categorize applied and unapplied payments (pre-booked stage, none to apply it with).

- e. Apply payments based on defined hierarchy.

4. Reporting & Monitoring

- a. Generate reports with filtering options based on predefined fields (with aging).
- b. Generate reports in agreed formats with filtering based on predefined field values.
- c. Provide a facility to view outstanding accounts receivable per Client per Invoice.

5. Unapplied Payment & GL Integration

- a. Auto-create default journal entries for successfully uploaded transactions (applied and unapplied).
- b. Received Dollar/other currency will be logged as Peso based on conversion rate.
- c. Categorize records into pre-booked accounts and excess payments.
- d. Auto-create default GL entries in Peso currency.
- e. Allow processing of payment applications.
- f. Auto-reverse records with minimal balances (Php 10.00 and below) to AP overages.
- g. Provide disposition and flow-in information to Collection for processing of refund.

6. Unapplied Payment Disposition Facility

- a. Facility to maintain disposition type where User can view and provide disposition/s for unapplied payments.

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

CASHIERING (Payments Acceptance and Application)

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
CSHID.001	1	Operations	Create, cancel, and reinstate Acknowledgement Receipt (AR). 1. Premium Payments - Bills Payments, OTC, Trade, CLPC, PDC. 2. Non-Premium Payments - Insurance Payments (Refund, Other expenses, AR Insurance)	Expected Result: 1. Users can create, cancel, and reinstate AR with appropriate validations and audit trails. 2. Receipts are issued with correct series numbering and stored in the system. Acceptance Criteria: 1. Users can input required information to create an AR. 2. The system auto-generates an AR number based on the branch. 3. Receipts are generated with correct series and validated against maintained series. 4. The AR reflects the received currency. Receipting will follow the received currency. 5. Users can select a reason for cancellation. 6. The system posts accounting entries upon cancellation or reinstatement. 6. The AR series must not be depleted before processing. 7. Users can select a reason for reinstatement. 8. Users must encode required information for reinstatement. 9. System to have a facility to allow Full / Partial Reinstatement 10. System creates journal entries for successfully uploaded transactions (applied and unapplied).	Must have

Business Requirement Document

Operations

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				9. System creates journal entries for successfully uploaded transactions (applied and unapplied). 10. The system auto-generates a transaction number for reinstatement. 11. Audit trail is recorded for each action. Negative Scenario: 1. Attempt to cancel without selecting a reason. 2. Reinstatement without required fields. 3. Duplicate transaction number.	
CSHID.003	1	System	Facility to allow User to choose the reason for AR or OR cancellation.	Expected Result: 1. Users can select a reason for cancellation of AR or OR with appropriate validations and audit trails. Acceptance Criteria: 1. Users can select a reason for cancellation. a. For Premium, User selects any of the following: ○ Discrepancy in check amount ○ No signature ○ Incorrect payee ○ Check not picked-up ○ Incorrect check details provided by the client or Insurer ○ Others – reason that is not part of the initial list. b. For Commission, User selects any of the following: ○ Incorrect payment details	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				○ Negative VAT ○ Discount not applied c. PDC Retrieval / replacement. PDC is not yet due on maturity date. ○ For replacement ○ Pull out d. Bounced or returned check - Bounced check reinstatement does not require the form to be filled out. e. Error in issuance details. f. Error printing. g. Check not picked up. h. Double issuance. i. Others – reason that is not part of the initial list. Negative Scenario: 1. User attempts to submit without selecting a reason. 2. User selects an invalid or deprecated reason. 3. System fails to save the selected reason.	
CSHID.004	1	System	Facility to allow User to choose the reason for Reinstatement.	Expected Result: 1. Users can select a reinstatement reason from a predefined list when initiating a reinstatement request. Acceptance Criteria: 1. Users can select a reason for reinstatement. a. Premium payment reinstatement ○ Due to Cancellation ○ Mis-application of payment	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				○ Withholding Tax Adjustment ○ Others– reason that is not part of the initial list. b. Direct Payment Reinstatement ○ Due to double reversal ○ Due to wrong details of OR ○ Withholding Tax Adjustment ○ Due to Cancellation ○ Others– reason that is not part of the initial list. 2. The selected reason is saved and reflected in the transaction record. 3. The reason is mandatory before submission. 4. Journal entry is created. Negative Scenario: 1. User attempts to submit without selecting a reason → system should show a validation error. 2. User selects an invalid or deprecated reason → system should prevent submission. 3. System fails to save the selected reason → reinstatement should not proceed.	
CSHID.005	1	System	Facility to allow User to encode the required information for Reinstatement. 1. Premium Payment ○ Invoice number	Expected Result: 1. Users can select a reason and encode necessary details for reinstatement. Acceptance Criteria:	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			○ Acknowledgment Receipt number ○ Assured/Payor name ○ Amount reinstated ○ Account officer ○ Unit Head ○ Team Leader 2. Direct Payment ○ Invoice number ○ OR number ○ Assured/Payor name ○ Amount reinstated	1. Reason and required fields are mandatory. 2. Reinstated transaction reflects original details. Negative Scenario: 1. Missing fields → Reinstatement blocked.	
CSHID.006	1	System	Auto-assign AR/OR numbers per transaction based on branch. Note: OR issuance is exclusively done by HO.	Expected Result: 1. Each transaction is automatically assigned an AR or OR number based on the branch. OR numbers are only issued by the Head Office (HO). Acceptance Criteria: 1. The system auto-generates an AR/OR number based on the branch. 2. AR numbers are auto-assigned for branch transactions. 3. OR numbers are auto-assigned only for HO transactions. 4. Numbering follows a sequential or predefined format that will be generated upon posting. 5. System prevents OR issuance from non-HO branches. Negative Scenario: 1. A branch tries to issue an OR.	Must have

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Duplicate AR/OR numbers are generated. Transaction is saved without an AR/OR number.	
CSHID.007	1	System	Issue an individual OR per commission check or credited amount or multiple payments <i>in</i> one OR as long as one Insurer / Payee (one certificate). Source of data: 1. Uploaded commission payment details from collection. 2. Remittance Schedule.	Expected Result: 1. OR issued per commission check or multiple payments per Insurer/payee. Acceptance Criteria: 1. OR reflects correct payee and amount. 2. One OR per Remittance Batch number. 3. OR is issued per individual payment unless consolidation criteria are met. 4. Consolidation is allowed only if: a. Same Insurer/payee b. Same certificate 5. OR reflects all relevant payment details accurately. 6. System prevents consolidation if any criteria mismatch. Negative Scenario: 1. Payments from different Insurers/payees are consolidated → system should reject. 2. OR issued with missing or incorrect payment details → system should flag error. 3. Multiple payments with different certificates are combined → system should prevent this.	Must have
CSHID.008	1	System	For AR, allow uploads for Bills, Trade, CLPC payments, matured PDC, Direct Credit for batch processing.	Expected Result: 1. Files uploaded are in agreed format and file type. 2. Files are encrypted and cannot be edited.	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

				e. Payment Type f. Payor g. Account Ref No h. Assured i. EBIX_RefNo j. Logged By k. Requestor 7. Report on uploaded (applied, unapplied). 8. Unmatched items will flow in to unapplied premium payment bucket.	
CSHID.009	1	System	Facility to accept check with “for check pick up” from Collection.	Expected Result: When a collection effort is submitted with the status “for check pick”, the system will: 1. Automatically queue the account into the Cashiering Module. 2. Allow Cashiering to filter accounts based on the check pick-up date. 3. Automatically assign a unique acknowledgment receipt number to each account during the filtering/printing process. 4. Ensure that the receipt number is logged and traceable for audit purposes. 5. Display only accounts that are due for acknowledgment receipt printing. Acceptance Criteria: 1. Account with “for check pick” status is automatically queued in Cashiering Module.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Cashiering processor can filter accounts by check pick-up date. 3. Only accounts due for receipt printing are shown. 4. System assigns a unique acknowledgment receipt number automatically. 5. Receipt number follows the defined format and is logged. Negative Scenario: 1. Account with incorrect status (e.g., "for follow-up") is not queued. 2. Missing or invalid check pick-up date prevents filtering. 3. Duplicate receipt number causes system error. 4. Account fails to queue due to system integration issue. 5. Receipt number not assigned due to system failure. 6. Accounts not due for printing are incorrectly included in the filtered list.	
CSHID.010	2	Operations	Access and perform search using the following parameter: • AR Number • OR Number • Client Number • Invoice Number • Payor Name • Assured Name • Amount • Date of Issuance • Policy Number	Expected Result: 1. Users can access the search interface and successfully retrieve records using any of the listed parameters. 2. System returns accurate and relevant results based on the input criteria. Acceptance Criteria: 1. Search interface includes all listed parameters as filters or input fields. 2. Users can search using one or multiple parameters simultaneously.	Must have.

			Insurer Name	3. Search results are displayed in a readable format with key details. 4. Results match the input criteria exactly or based on partial matches (where applicable, e.g., names). 5. System handles large volumes of data efficiently without timeouts. 6. Search facility should not impact performance of other functionalities. 7. Search logs are maintained for audit and troubleshooting. Negative Scenario: 1. Search returns no results despite valid input. 2. Results are inaccurate or unrelated to the search criteria. 3. System crashes or slows down during search operations. 4. Input fields are missing or not functioning. 5. Users are unable to perform multi-parameter searches. 6. Search results include duplicate or outdated records.	
CSHID.011	2	System	Facility to log in the Audit Trail the AR number and Username.	Expected Result: Every action involving an AR number is logged in the system's audit trail along with the corresponding Username, ensuring traceability and accountability. Acceptance Criteria: 1. Audit trail captures both AR number and Username for every relevant transaction or access. 2. Logs include timestamp, action performed, and system module accessed.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Audit entries are immutable and accessible to authorized personnel. 4. System allows filtering or searching audit logs by AR number or Username. 5. Audit trail is updated in real-time or near real-time. Negative Scenario: 1. AR number or Username is missing from the audit log. 2. Audit trail fails to record certain actions or transactions. 3. Logs are editable. 4. Audit trail is inaccessible or not searchable. 5. Incorrect Username is logged for a transaction.	
CSHID.012	3	System	Post Accounting entries once cancellation is posted.	Expected Result: 1. System posts appropriate accounting entries upon cancellation. Acceptance Criteria: 1. Journal entries are created and posted automatically. 2. System will handle the Peso conversion for journal entries or booking purposes. 3. Allow exchange rate with 2 decimal places. - Exchange rate computation refers to the Comptrollership exchange rate table. 4. Entries reflect correct currency conversion if applicable. Negative Scenario: Failure to post journal entries.	Must have
CSHID.013	3	System	Post Accounting entries once reinstatement is posted.	Expected Result:

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.015	3	System	Validate AR/OR series is not depleted before transaction processing.	Expected Result: 1. User cannot proceed with transaction if maintained series has been depleted. 2. System checks if AR/OR series is available before processing. Acceptance Criteria: 1. Transaction is blocked if series is depleted. 2. Error message is displayed. Negative Scenario: Series depleted → Transaction fails with error.	Must have
CSHID.016	3	System	Automatically reverse Premium Receivables with minimal balances and below (Php 10.00 and below) if not equal to the following: a. Two percent (2%) creditable withholding tax b. Amount of DST charged into the account c. Amount of the entire premium	Expected Result: The system should automatically reverse any financial record with a balance of Php 10.00 or below if the balance does not match the corresponding PR2307 balance. Ensure no duplicate reversals occur. Acceptance Criteria: 1. The system must refer to the "minimal balance" table. Maintenance: There should be reference to the minimal balance table. 2. The system identifies records with balances $\leq$ Php 10.00. It compares each record's balance with the corresponding PR2307 balance. 3. If the record's balance $\neq$ PR2307 balance, the system flags it for reversal.	Must have.

Business Requirement Document

Operations

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.019	4	System	Facility to perform batch printing of AR / OR.	Expected Result: 1. Users can initiate a batch printing process for multiple ARs/ORs from a selected list or filtered criteria. (e.g. AR – per BDOI Location, OR – per Insurer) 2. The system generates print-ready documents for each AR/OR in the batch. 3. The system can save copies of the generated AR / OR. 4. The batch printing process is efficient, accurate, and logs the activity for audit purposes. 5. Users receive confirmation once the batch printing is complete, with options to reprint or download. Acceptance Criteria 1. Users can select multiple AR/OR records manually or via filters. 2. Selected records are clearly listed before printing. 3. Each AR/OR is formatted according to standards and includes necessary details. 4. The system sends all selected documents to the printer or generates a downloadable file. 5. Batch print completes within acceptable time limits (e.g., <10 seconds for 50 documents). 6. The system logs batch printing activity: user, timestamp, number of documents printed. 7. If any document fails to print, the system notifies the User and allows retry or skip. 8. Only authorized users can perform batch printing.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. A User without proper permissions attempts batch printing. 2. User initiates batch print without selecting any AR/OR. 3. One or more AR/OR documents are generated with missing or incorrect data. 4. Batch printing of a large number of documents causes system to hang or timeout. 5. Documents are generated but fail to reach the printer due to connectivity issues.	
CSHID.020	5	System	Perform matching at the point of payment acceptance except for issued PDC.	Expected Result: 1. Matching on Booked Accounts • Apply payment application on accounts with outstanding premium receivables only. • Payment > outstanding AR Balance, apply 100% of Outstanding balance except for accounts with 2% CWT, only 98% will be applied. • Any excess will be considered as Unapplied. 2. Unmatched on Booked Accounts and Matching in Pre-booked Accounts • Perform matching on pre-booked accounts and wait for booking. • Process re-run as per defined schedule. ○ Manually trigger (when needed) ○ Auto-trigger (batch schedule) • Processed accounts should no longer be available in the <pre-booked table>	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Unmatched on Booked and Pre-booked Accounts Tag as no match and will be considered as unapplied. 4. Excess Payments – Records where the payment amount exceeds the expected or invoiced amount. 5. Matched vs. cancelled booking/slips - Booking did push thru but Client uses the invalid reference number.	
CSHID.021	5	System	Facility to flow-in payment made from Insurer to AR Insurance. These are payment from Insurer that needs to be segregated from premium payments and expected to flow-in to AR Insurance.	Expected Result: 1. Automatically identified and segregated from premium payments. 2. Correctly routed to AR Insurance for reconciliation and accounting. 3. Reflected in AR Insurance with accurate status and traceability. Acceptance Criteria: 1. System must distinguish between premium payments and non-premium payments from insurers. 2. Non-premium payments must be posted to AR Insurance within the same business day. Negative Scenarios: 1. A premium payment is incorrectly routed to AR Insurance. 2. A non-premium payment is posted to premium accounts.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.022	5	System	Apply payments based on defined hierarchy of payment application. Per Transaction Level hierarchy: 1. Premium Receivable - DST 2. Premium Receivable - Premium Tax (VAT) 3. Premium Receivable - LGT 4. Premium Receivable - Other Charges 5. Premium Receivable - Basic Premium Mode of Payment hierarchy: 1. Check - Cash	Expected Result: System applies payments to each transaction category in the defined order, using the highest-priority payment mode available.	Must have.
CSHID.023	4	System	Capability to generate reports. 2. See Cashiering Reports list under Annex.	Expected Result: The System is able to generate the needed reports. Acceptance Criteria: 1. Reports are generated with the expected format. 2. Reports are reflecting the data required. 3. Reports can be saved, downloaded, or printed by authorized Users. 4. Authorized User can view the reports.	Mush have.
CSHID.024	6	System	Facility where users can view and manage dispositions for unapplied payments, ensuring proper tracking, approval, and processing of various disposition types. Example of Disposition Types: • Apply to other invoice • DST payment application • Refund	Expected Results: 1. Users can easily assign and track dispositions for unapplied payments. 2. Approvals and reversals are systematically routed and logged. 3. Disposition types are configurable and auditable.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			- Reclass - Transfer to other marketing unit - Others (customizable)	4. Payments move between tabs based on their status and disposition. Acceptance Criteria: - Users can assign a disposition to any unapplied payment. - Payments move to the correct tab based on disposition status. - Dispositions requiring approval are routed to the correct approver. - All disposition actions are logged with user, timestamp, and action. - Users can update or correct dispositions before final processing. - Only authorized users can approve, reverse, or maintain disposition types. Negative Scenario: - Invalid disposition type selected. - Unauthorized user attempts approval. - Unauthorized user attempts update on disposition types.	
CSHID.025	6	System	Facility to display information as per Disposition Tabs - Unapplied - Displays payments with no disposition assigned. - Monitoring - Displays payments with disposition already assigned. - For Approval - Displays payments requiring Team approval.	Expected Result: - Users can view payment details and assign a disposition type. - Users can track status (e.g., pending, in process, completed) and view disposition history. - For approval is triggered by a disposition status.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			4. For Reversal - Displays payments marked for reversal (e.g., incorrect application).	4. View reversal reason, submit for processing and track reversal status.	

Requirement are needed for Cashiering.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
MKTID.013		Marketing	Facility to tag Reversal Transactions for BIR 2307, submit certificates received from clients, and enforce system validations on reversal amounts. The system must validate certificate amounts against the computed PR 2307 amount, and the outstanding PR balance, to ensure accuracy, compliance, and prevention of over-reversal.	Expected Result / Acceptance Criteria: - Reference numbers are generated and stored upon tagging of reversal transactions for BIR 2307. - The system computes the allowable PR 2307 amount based on applicable withholding tax rules and invoice details. - The system retrieves the current outstanding Premium Receivable (PR) balance related to the invoice or account. - The system validates the certificate amount such that: - It does not exceed the computed PR 2307 amount, and - It does not exceed the outstanding PR balance. - The system checks for the existence of any outstanding Commission Receivable (CRU) related to the same invoice, account, or transaction after PR 2307 computation and validation. - Data encoded by the user is complete and accurate, and all required validation checks (PR 2307, PR balance, and CRU) are successfully passed before proceeding.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				7. The system displays validated reversal details upon successful completion of all checks, including PR 2307, PR balance, and CRU status. 8. The user can validate batch details against received BIR 2307 / CWT certificates for accuracy and completeness. 9. The system generates a BIR 2307 transaction report after successful validation. The report is printable and ready for posting. 10. The BIR 2307 transaction report is posted, and routed directly to Disbursement. 11. If an outstanding CRU exists, the system continues the transaction flow to Commission Receivable processing, and ensures the PR 2307 reversal does not prematurely terminate the process while commission remains unpaid. 12. BIR 2307 certificates are sorted per insurer and forwarded appropriately as part of the posting process. 13. Premium Receivable is fully zeroed out once the validated PR 2307 reversal and related postings are completed, subject to CRU handling where applicable. 14. The user can attach supporting documents (e.g., BIR 2307 certificates, CWT copies) to the PR 2307 transaction report. 15. All reversal transactions are fully traceable to: a. The related invoice, b. Accounts Receivable / Official Receipt (AR/OR), c. BIR 2307 record, and d. Commission Receivable (CRU), ensuring complete audit trail and compliance.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
DBMID.001		Disbursement	Receive and process BIR 2307 Report. Receive sorted BIR 2307 certificates and supporting documents from Marketing Collection.	Expected Result / Acceptance Criteria: 1. Processed BIR certificate transactions are received from Marketing Collection. 2. BIR 2307 reports are received per insurer. 3. Certificates are sorted and complete. Supporting documents are complete and attached. 4. Release to insurers.	Must have.

REMITTANCE

Remittance

To have a system for managing remittance-related processes, aimed at improving operational efficiency and reducing manual workload. It enables users to systematically handle various remittance transactions, including account extraction, processing, approval, and monitoring. The system also supports tracking of official receipts (ORs), uploading OR details, requesting marketing dispositions for returned ORs, and generating comprehensive reports.

1. Extraction & Remittance Processing

- a. Enable extraction per Insurer and per remittance type (With Incentives, Normal-Dollar, Normal-Peso).
- b. Facility to remove On Hold tagging of accounts to be included for extraction.
- c. Automate extraction based on predefined schedules.
- d. Ability to perform manual extract for specific invoice number per Insurer.
- e. Trigger extraction at end of day if payment application is searched.
- f. Extract only from applied and posted payments buckets.
- g. View extracted accounts.
- h. Group by remittance type, processor, Insurer, and batch number.
- i. Generate unique reference/batch numbers for each remittance extract.
- j. Transfer extracted accounts to process remittance and tag status accordingly.
- k. Submit accounts for remittance processing.
- l. Submit, hold, and return invoices or batch numbers.
- m. Print remittance schedule and payment request.
- n. Invoice-level remittance details and visibility of payment details.

2. Sending and Uploading of File

- a. Send Remittance Schedule to Insurer.
- b. Receive from Insurer populated Remittance Schedule with OR from Insurer for Client details (date and number).
- c. Upload file to system to update with OR from Insurer for Client details (date and number).

3. Validation & Filtering Criteria

- a. Paid AR should not be more than outstanding DTIP per remittance.
- b. Generate list of Paid AR that are higher and should be excluded from the extraction.
- c. Check payment status.
- d. Holding period.
- e. Ensure checks are at least 3 days old and cleared before inclusion.
- f. Validate check payment holding period and clearance.
- g. Validate remittance status upon submission.
- h. Facility to tag account as ON HOLD and to be excluded during extract.
- i. Exclude accounts on hold or with pending negative adjustments request.

- j. Exclude written-off accounts.
- k. Validation of remittance details and filtering in reports.

4. Search & View Capabilities

- a. Search accounts and payment details by invoice, or remittance batch number, endorsement reference number, policy number, assured name.
- b. View account/invoice details.
- c. View submitted accounts from Process Remittance.
- d. Visibility of payment details (dates, amounts, AR numbers) and user-friendly interface.

5. Hold Remittance Management

- a. View Hold Remittance regardless of the status.
- b. Exclude Hold accounts during extraction.
- c. Track Hold status and Remittance status.
- d. Status of remittances and adjustments.

6. Notifications & Tracking

- a. Notify users based on remittance and disbursement status.
- b. Notify Remittance Team of pending negative adjustments.
- c. Track remittance status across all stages.
- d. Auto-email notifications and dashboard integration for disposition tasks.

Operations

REMITTANCE

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
RMTID.001	1	System	Facility to allow extraction per Insurer and per remittance type (With Incentives, Normal-Dollar, Normal-Peso). Frequency: Off-peak execution. Batch Run: TDB	Expected Results: 1. System allows users to select an Insurer and Remittance type, and successfully extract relevant accounts. Acceptance Criteria: 1. User can select Insurer and remittance type from dropdowns or filters. 2. Extraction returns only accounts matching the selected criteria. 3. Extracted data includes correct remittance type tags. 4. System to save extracted data in a shared drive -with separate folders for each remittance type (Normal-Peso, Normal Dollar, and w/ Incentives). 5. Extract reflects the standard naming convention of files. 6. Exclude accounts that have pending financial endorsement (cancellation, decrease in TSI, decrease in comm, etc.) upon extraction. 7. Extract process does not impact the performance of the system. 8. System to send notification on the result of extract. Negative Scenario: 1. Extraction fails when remittance type is not selected 2. Incorrect Insurer selected returns unrelated accounts. 3. System extracts accounts with mismatched remittance types.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.002	1	System	Facility to allow User to edit the extracted file online.	Expected Result: 1. The System allows users to open the extracted file. (e.g. grid/spreadsheet view) 2. Users can mark specific record or row for exclusion from further processing (e.g., remittance extraction), but cannot edit financial data (premium, commission, TSI, rates, etc.). 3. All exclusion actions are tracked with user, timestamp, and details, and can be reversed before submission. 4. When the file is pushed to Disbursement, only non-excluded data is included, and a complete audit trail of exclusions is maintained. 5. Data integrity controls ensure that financial values cannot be changed. Acceptance Criteria: 1. The online viewer provides clear controls on record or row exclusion and a summary of what will be excluded. 2. Attempts to change financial fields are not allowed. 3. The system displays a preview of the resulting dataset before submission. 4. Excluded data can be restored before final submission. 5. Only authorized users can perform exclusions; all actions are logged. Negative Scenario: 1. User attempts to edit financial fields (e.g. premium, commission, etc.) 2. Exclusions would remove mandatory fields required by downstream modules (e.g., policy number, valid reference). 3. User without proper permissions tries to apply exclusions.	Must have
RMTID.003	1	System	Automatically extract based on predefined schedules and criteria.	Expected Results: 1. System performs automatic extraction at scheduled intervals without manual intervention. 2. Accounts that did not satisfy the remittance criteria shall remain in the repository tagged as not yet for remittance.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Scheduler is configurable by admin. - Extraction runs at set times and logs results. - Accounts are auto-tag accordingly: - Extracted- accounts met the specified criteria for extraction and were Included in the extract. - Unextracted not yet due for remittance- accounts that did not meet the specified criteria for extraction and are not yet due for remittance. - Unextracted due for remittance- accounts that did not meet the specified criteria for extraction and are due for remittance. - Returned - accounts met the specified criteria for extraction and were returned by user. Negative Scenario: - Scheduler fails to trigger extraction. - Extraction runs at incorrect times. - Extracted data is incomplete or incorrect.	
RMTID.004	1	Operations	Ability to perform manual extract for specific invoice number per Insurer.	Expected Results: Users can manually extract data for a specific invoice number tied to an Insurer. Acceptance Criteria: - Manual extract interface allows invoice number input. - Extracted data matches the invoice and Insurer. - System confirms successful extraction.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. Invoice number not found or mismatched with Insurer. 2. Manual extract returns no data or incorrect data. 3. System allows extraction of invalid or unposted invoices.	
RMTID.005	1	System	Facility to search account and payment details per invoice or per batch(individual/batch) for the processing of remittance. Trigger extraction at end of day if payment application is searched.	Expected Results: System automatically triggers extraction when payment application is searched at end of day. Acceptance Criteria: 1. Payment application search logs trigger extraction. 2. Extracted accounts match payment application criteria 3. Extraction timestamp aligns with end-of-day schedule. Negative Scenario: 1. Extraction does not trigger after search. 2. Triggered extraction includes incorrect accounts. 3. System triggers extraction multiple times for same search.	Must have.
RMTID.006	1	System	Extract only from applied and posted payments buckets. Payments maybe in cash or in check and shall consider payment collection from all channels (e.g. Credit to Account, Automatic Debit Arrangement (ADA), Over-the-Counter from Cashiering, Bills Payment, etc).	Expected Results: System filters and extracts only accounts with payments that are both applied and posted. Acceptance Criteria: 1. Extraction excludes unposted or unapplied payments. 2. Extracted accounts show correct payment status. 3. Logs confirm payment status at time of extraction. Negative Scenario: 1. System includes payments that are pending or unposted. 2. Extraction fails due to missing status flags. 3. Applied payments are skipped due to incorrect tagging.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.007	1	System	Group extract by remittance type, processor, Insurer, and batch number.	Expected Results: Extracted accounts are grouped logically based on remittance type, processor, Insurer, and batch number. Acceptance Criteria: 1. Grouping options are available in the UI. 2. Accounts are correctly categorized under selected grouping criteria. 3. Batch numbers are unique and correctly assigned. 4. Extract can be downloaded by authorize User. 5. Extract is viewable to authorized User. Negative Scenario: 1. Accounts are grouped incorrectly or not grouped at all. 2. Duplicate batch numbers appear. 3. Processor or Insurer tags are missing or mismatched.	Must have.
RMTID.008	1	System	Generate unique reference/batch numbers for each remittance extract.	Expected Results: 1. Each remittance extract is assigned a unique reference or batch number. Acceptance Criteria: 1. Batch numbers are system-generated and non-repeating. 2. Reference numbers are traceable to extraction logs. 3. Users can search by batch/reference number. Negative Scenario: 1. Duplicate batch numbers are generated. 2. Reference numbers are missing or incorrectly formatted. 3. Batch number does not link to correct extract.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.009	1	System	Transfer extracted accounts to Process Remittance and tag status accordingly. Status: Review in process - Accounts that were system extracted and being reviewed by Processor on the Process Remittance.	Expected Results: 1. Extracted accounts are moved to the remittance processing module with updated status tags. 2. Authorized user to have a Facility to re-assign to other Processor Acceptance Criteria: 1. Transfer is logged and confirmed. 2. Accounts show updated status. 3. No data loss during transfer. Negative Scenario: 1. Accounts fail to transfer. 2. Status tags are not updated. 3. Transferred accounts are duplicated or missing.	Must have.
RMTID.010	1	Operations	Submit accounts for remittance processing.	Expected Results: 1. Users can submit extracted accounts for remittance processing. Acceptance Criteria: 1. Submission triggers processing workflow. 2. Accounts are marked with the defined status for the submitted accounts. 3. Confirmation message is displayed. Negative Scenario: 1. Submission fails due to validation errors. 2. Accounts are submitted multiple times. 3. Submitted accounts do not appear in processing queue.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.011	1	Operations	Print and save copy of remittance schedule and payment request.	Expected Results: System generates printable versions of remittance schedules and payment requests. Acceptance Criteria: 1. Print option is available after submission. 2. Save option is available. 3. Printed documents include batch number, Insurer, remittance type, and payment details. 4. Format is consistent and readable. Negative Scenario: 1. Print function fails or generates incomplete documents. 2. Incorrect data appears on printed schedule 3. Print option is unavailable due to missing status.	Must have.
RMTID.012	2	System	Receive a populated remittance schedule from the Insurer. The received schedule must include the Official Receipt (OR) details for the client (date and number). The system should validate the integrity and authenticity of the received data.	Expected Result: 1. The schedule includes complete Official Receipt (OR) details for each client/invoice (OR date and OR number). 2. The system validates the integrity (completeness and format) and authenticity (source and data consistency) of the received data. 3. Validated data is stored and made available for further processing or display. Acceptance Criteria: 1. The system must be able to receive remittance schedules from the Insurer via a secure and predefined channel. (e.g. upload to System) 2. The received file must be in an accepted format.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. The schedule is received without OR number or OR date. 2. The same OR number appears more than once for the same client. 3. The file format is incorrect or unreadable.	
RMTID.013	2	System	Accept and upload the received remittance schedule file. The upload process should update the system with the OR details for the client (date and number). The system should confirm the successful upload and update of the remittance schedule.	Expected Result: 1. The system reads and processes the file. 2. It extracts and updates the client records with the Official Receipt (OR) details (date and number). 3. The system confirms the successful upload and update to the User or admin. 4. Acceptance Criteria: 1. The system provides a secure interface for uploading remittance schedule files. 2. Upon successful validation, the system updates the client records with the OR details. Negative Scenario: 1. User uploads a file in an unsupported format 2. File is missing OR number or OR date for one or more records. 3. File cannot be read due to corruption or incorrect structure.	Must have.
RMTID.014	3	System	Validate that paid AR is not be more than outstanding DTIP per remittance. Amount collected > DTIP, amount to be	Expected Results: System checks that Paid AR does not exceed DTIP before including in extraction. Acceptance Criteria: 1. Validation rule is enforced during extraction.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			remitted should be equal to balance of the DTIP account.	2. Accounts with Paid AR > DTIP are flagged and excluded. 3. Error message or log entry is generated. 4. Negative DTIPs are not included in the extract. Negative Scenario: 1. Accounts with excessive Paid AR are included. 2. Validation rule is bypassed or misconfigured. 3. Incorrect DTIP values cause false exclusions.	
RMTID.015	3	System	Generate list of Paid AR that are higher than the DTIP balance.	Expected Results: 1. System generates a report listing accounts with Paid AR exceeding DTIP. Acceptance Criteria: 1. Report includes invoice number, Insurer, Paid AR, and DTIP. 2. List is updated in real-time or per extraction run. 3. Excluded accounts are clearly marked. Negative Scenario: 1. Report is incomplete or missing accounts. 2. Accounts are listed but not excluded. 3. Paid AR and DTIP values are incorrectly calculated.	Must have.
RMTID.016	3	System	Upon uploading the data back into the system, an Exception Report shall be generated to validate the consistency between the Official Receipt (OR) amount and the corresponding Paid PR.	Expected Result: The system must: 1. Compare the OR amount against the paid PR for each transaction. 2. Identify and list all records where discrepancies exist (i.e., mismatched amounts). 3. Categorize the upload results into: a. Successful uploads – records with matching OR and paid PR amounts.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				b. Unsuccessful uploads – records with mismatched amounts. Acceptance Criteria: - The Exception Report must be automatically generated after each upload. The report must include: - Transaction ID or reference number - OR amount - Paid PR amount - Status (Successful / Unsuccessful) - Reason for failure (for unsuccessful uploads) - A summary of successful and unsuccessful uploads must be displayed. - The Exception Report must be downloadable in a standard format (e.g., Excel or PDF). - It must be accessible from the upload history or audit trail section.	
RMTID.017	3	System	Ensure checks are at least 3 days old and cleared before inclusion to the extract. (Holding period)	Expected Results: - System verifies that check payments are at least 3 days old and have cleared before including them in extraction. - Days include banking days only. Acceptance Criteria: - Checks younger than 3 days or uncleared are excluded. - Validation is applied during extraction. - Cleared status is visible in payment details. Negative Scenario:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Checks under 3 days old are included. - Cleared status is not properly validated. - System includes checks with pending clearance.	
RMTID.018	3	System	Validate check payment holding period and clearance	Expected Results: - System confirms both the age and clearance status of check payments before processing. Acceptance Criteria: - Holding period and clearance status are checked together. - Only eligible checks are processed. - Validation logs are generated. Negative Scenario: - Checks are processed without clearance. - Holding period is miscalculated. - Validation fails.	Must have.
RMTID.019	3	System	Validate remittance status upon submission. - Approved - Review In Process - Requested For Hold - Unapplied Payment - Outstanding Balance - Unprocessed - Fully Remitted - Partially Remitted	Expected Results: System checks remittance status before allowing submission.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria		Priority Level
				Status	Description	
				Approved	Account has been approved and forwarded to the Disbursement module. No longer editable.	
				Review in Process	Account is being reviewed by the Remittance Processor.	
				Requested for Hold	Account has a pending hold request. Linked to Hold Remittance tab.	
				Unapplied Payment	Payment received but not yet applied.	
				With Outstanding Balance	Account has uncollected premium. Refer to Cashiering Module for payment status.	
				Unprocessed	Account not yet included in any extract. May have pending adjustments, unapplied payments, or not yet due for remittance.	
				Fully Remitted	Account has been paid in full. DV number assigned. No outstanding DTIP balance.	
				Partially Remitted	Partial payment has been processed. DV number assigned. Outstanding DTIP balance remains.	
				Acceptance Criteria: 1. Only remittances with valid status can be submitted. 2. Invalid statuses trigger error messages. 3. Status is updated post-submission. Negative Scenario: 1. Remittances with invalid status are submitted. 2. Status does not update after submission. 3. Submission bypasses validation.		
RMTID.020	3	System	Exclude accounts on hold or with pending negative adjustments request.	Expected Results: Accounts with “On Hold” status or pending negative adjustments are excluded from extraction.	Must have.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Both conditions are checked during extraction. - Excluded accounts are listed in a report. - Extraction includes only eligible accounts. Negative Scenario: - Pending adjustments are ignored. "On Hold" accounts are not excluded. - System fails to identify pending adjustment status.	
RMTID.021	3	System	Facility to process as part of Remittance an account when indicated holding dates expired or ended.	Expected Result: - The system should allow processing of accounts after their designated holding dates. - Information on the hold account will flow-in from Marketing. Acceptance Criteria: - The system allows processing of accounts past their holding date. - All updates are logged with timestamp. - Reports and dashboards reflect accounts processed beyond hold dates.	
RMTID.022	3	System	Exclude written-off accounts.	Expected Results: - The system should exclude all accounts marked as written-off from the extract. Acceptance Criteria: - Accounts with a status or flag indicating "written-off" are excluded from all relevant outputs.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Written-off accounts remain accessible in audit logs or detailed views, but are clearly marked and excluded from extract. Negative Scenario: 1. Written-off are included.	
RMTID.023	3	System	Automate additional incentive early remittance to Insurer.	Expected Result: System to compute additional incentive for early remittance within 30 days from inception. Acceptance Criteria: System checks remittance date and applies incentive only if within 30-day window. Negative Scenario: Incentive applied despite late remittance or missing insurer data.	Must have.
RMTID.024	4	System	Allow User to view extracted accounts.	Expected Results: 1. Users can view a list of accounts that have been successfully extracted. Acceptance Criteria: 1. Extracted accounts are displayed in a searchable and filterable list. 2. Each account shows relevant details (e.g., Insurer, remittance type, batch number). 3. View reflects real-time extraction results. Negative Scenario:	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Extracted accounts not visible due to UI or backend errors. 2. View shows outdated or incorrect data. 3. Filters do not work as expected.	
RMTID.025	4	System	Allow User to search accounts and payment details by: • Invoice Number • Remittance batch number • Endorsement reference number • Policy number • Assured name.	Expected Results: Users can search for accounts using multiple identifiers. Acceptance Criteria: 1. Search fields are available and functional. 2. Results match entered criteria. 3. Partial and exact matches are supported. Negative Scenario: 1. Search returns incorrect or no results. 2. Fields are missing or non-functional. 3. Search is case-sensitive or format-dependent.	Must have.
RMTID.026	4	Operations	View account/invoice details.	Expected Results: 1. Users can view detailed information for each account or invoice. Acceptance Criteria: 1. Details include payment status, remittance type, Insurer, and history. 2. View is accessible from search results. 3. Data is accurate and up-to-date. Negative Scenario: 1. Details are missing or incorrect. 2. View fails to load. 3. Users see unauthorized data.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.027	4	Operations	View submitted accounts from Process Remittance.	Expected Results: Users can view all accounts submitted for remittance processing. Acceptance Criteria: - Submitted accounts are listed with status and batch information. - View is updated in real-time. - Filters and sorting are available. Negative Scenario: - Submitted accounts are not visible. - View shows outdated or incorrect data. - Filtering fails.	Must have.
RMTID.028	4	Operations	Check payment status	Expected Results: - System validates payment status before extraction or processing. Acceptance Criteria: - Only payments with valid statuses (e.g., posted, cleared) are processed. - Invalid or pending statuses trigger exclusion. - Status is visible in account details. Negative Scenario: - Payments with invalid status are processed. - Status field is missing or incorrect. - System fails to update payment status in real-time.	Must have.
RMTID.029	5	Operations	Submit, hold, and return invoices or batch numbers.	Expected Results: Users can submit invoices or batch numbers for processing, place them on hold, or return them for correction.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Submission updates status. - Hold action tags invoice/batch. - Return action updates status and logs reason. - All actions are logged and traceable. Negative Scenario: - Invoices are submitted without validation. - Hold or return actions fail due to missing permissions. - Returned invoices are not removed from processing queue.	
RMTID.030	5	Operation	View special remittance request.	Expected Results: - System flow-in special remittance details from Marketing Collection. - Users can view special remittance requests. Acceptance Criteria: - Special remittance requests are visible with status and details. Negative Scenario: - Special Remittance requests are not visible. - View fails to load or update. - Status does not reflect actual progress.	Must have.
RMTID.031	5	System	Exclude active hold accounts during extraction	Expected Results: Accounts with active hold status are automatically excluded from extraction. Acceptance Criteria: - Hold status is checked during extraction. - Excluded accounts are listed in logs. - No manual filtering required.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: - Active hold accounts are included. - Hold status is not recognized. - Exclusion logic fails intermittently.	
RMTID.032	6	System	Track hold status and remittance status	Expected Results: System tracks and displays both hold and remittance statuses for each account. Acceptance Criteria: - Statuses are visible in account view. - Updates are logged and timestamped. - Users can filter by status. Negative Scenario: - Statuses are outdated or incorrect. - Tracking fails for certain accounts. - Filters do not work.	Must have.
RMTID.033	6	System	Notify users on status changes (returned, approved, on hold, etc.)	Expected Results: - Users receive notifications when the status of a special remittance request changes. Acceptance Criteria: - Notifications are triggered on each status change. - Message includes reference number and new status. - Delivery is confirmed (email, dashboard, etc.). Negative Scenario: - Notifications are delayed or not sent.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Incorrect status is communicated. - Users do not receive updates.	
RMTID.034	6	System	Notify users based on remittance and disbursement status	Expected Results: Users receive updates when remittance or disbursement status changes. Acceptance Criteria: - Notifications are timely and accurate. - Status changes are logged. - Users can configure notification preferences. Negative Scenario: - Notifications are missed or duplicated. - Incorrect status is sent. - Users cannot opt out.	Must have.
RMTID.035	6	System	Notify Remittance Team of pending negative adjustments	Expected Results: Remittance Team is alerted when negative adjustments are pending. Acceptance Criteria: - Notification includes affected accounts and adjustment details. - Team receives alerts via preferred channel. - Notification is logged. Negative Scenario: - Team is not notified. - Notification lacks detail. - Alerts are sent to wrong recipients.	Must have.
RMTID.036	6	System	Track remittance status across all stages	Expected Results: System tracks remittance status from extraction to disbursement.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Status updates are visible and timestamped. - Users can view history and current stage. - Tracking is consistent across modules. Negative Scenario: - Status is not updated. - Tracking fails for certain batches. - History is incomplete.	
RMTID.037	6	System	Track estimated items in production reports.	Expected Result: Estimated items are included and flagged in production reports. Acceptance Criteria: Reports show estimated items separately with appropriate labels. Negative Scenario: Estimated items are omitted or misclassified in reports.	Must have.
RMTID.038		System	Capabilities to include, record, update remittance details at the invoice level and ensure visible payment histories including dates, amounts, and AR numbers.	Expected Result: - Users can add, edit, and view payment application details directly at the invoice level. - The system maintains a clear and complete payment history for each invoice, including: Payment dates, Amounts applied, Associated AR. - Updates to payment applications are reflected in real-time and are traceable.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Users can audit and reconcile payments efficiently using the visible history. Negative Scenario: 1. Payment applications are recorded but not visible on the invoice.	
RMTID.039	4	System	Capability to generate reports. See Remittance Reports list under Annex.	Expected Result: The System is able to generate the needed reports. Acceptance Criteria: 1. Reports are generated with the expected format. 2. Reports are reflecting the data required. 3. Reports can be saved, downloaded, or printed by authorized Users. 4. Authorized User can view the reports.	Must have.
RMTID.040		System	Facility to ensure proper coordination and sequencing of invoice adjustments, remittance exemptions, and accounting entries. The system should include locking mechanisms, status indicators, and approval workflows.	Expected Result: 1. Accurate accounting entries based on finalized remittance status. 2. Prevention of conflicting transactions through locking and coordination. 3. Timely and traceable approval and adjustment processes. 4. Clear visibility of invoice status across units. Acceptance Criteria: 1. Invoice entries are locked during remittance or when still with comptrollership to prevent simultaneous edits. 2. Users can view current status (e.g., "In Remittance," "Pending Adjustment," "Locked for Editing"). 3. Relevant users are notified when an invoice is being handled by another unit.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. All actions (adjustments, exemptions, approvals) are logged with timestamps and User Name. Negative Scenarios: 1. Multiple users edit the same invoice without coordination, causing data conflicts. 2. Adjustment is made but not approved in time, delaying remittance and causing reporting issues. 3. Users are unaware of ongoing transactions, leading to duplicate or conflicting actions.	

Marketing activities that are needed for Remittance.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
MKTID.001	2	Marketing	Facility to initiate a request to send a remittance schedule to the Insurer. The request must include necessary client details (e.g., client ID, amount, date). The system should confirm the successful sending of the remittance schedule to the Insurer.	Expected Result: 1. The system captures all necessary client details (e.g., client ID, amount, date). 2. The system validates the input data. 3. The remittance schedule is successfully sent to the Insurer. 4. A confirmation message is displayed to the indicating successful transmission. Acceptance Criteria:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- System validated necessary client details (e.g., client ID, amount, date). - System confirms that the remittance schedule is successfully sent to the Insurer. Negative Scenario: - User submits the request without entering the client ID, amount, or date. - User tries to send the same remittance schedule multiple times.	
MKTID.002	5	Marketing	Facility to remove On Hold tagging of accounts to be included for extraction.	Expected Results: Users can remove "On Hold" status from accounts, making them eligible for extraction. Acceptance Criteria: "On Hold" accounts can be updated to new status tagging. - Updated accounts appear in extraction results. - Audit trail logs the status change. Negative Scenarios: - System allows extraction of accounts still tagged as "On Hold". - Removal fails due to permission issues. - Account status changes but does not reflect in extraction.	Must have.
MKTID.003	5	Marketing	Tag account as ON HOLD and to be excluded during extract.	Expected Results: Users can tag accounts as "On Hold", preventing them from being extracted.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 1. "On Hold" tag is available and functional. 2. Tagged accounts are excluded from extraction. 3. Tagging action is logged. Negative Scenarios: 1. "On Hold" accounts are still extracted. 2. Tagging fails or is not saved. 4. Users without permission can tag accounts.	
MKTID.004	5	Marketing	Assign approved hold requests to remittance processors.	Expected Results: Approved hold requests are assigned to designated processors for tracking and resolution. Acceptance Criteria: 1. Assignment interface is available. 2. Processor receives notification and access. 3. Assignment is logged and traceable. Negative Scenarios: 1. Requests are assigned to incorrect or inactive processors. 2. Assignment fails or is not saved. 4. Processor cannot access assigned requests.	Must have.
MKTID.005	5	Marketing	Create, cancel, and extend hold remittance requests	Expected Results: Users can manage hold requests by creating, canceling, or extending them. Acceptance Criteria: 1. Actions are available based on user role.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Status updates reflect changes. 3. History of actions is logged. Negative Scenarios: 1. Cancel or extend actions fail. 2. Hold requests are duplicated. 4. Status does not update correctly.	
MKTID.006	5	Marketing	Approve hold requests and cancellations	Expected Results: Authorized users can approve hold requests and their cancellations. Acceptance Criteria: 1. Approval workflow is enforced. 2. Notifications are sent upon approval. 3. Status changes are logged. Negative Scenarios: 1. Unauthorized users can approve requests. 2. Approval fails due to system error. 3. Cancellation is approved but not executed.	Must have.
MKTID.007	5	Marketing	Generate unique reference numbers for hold requests	Expected Results: Each hold request is assigned a unique reference number. Acceptance Criteria: 1. Reference numbers are system-generated and non-repeating. 2. Users can search by reference number. 3. Reference is linked to request details. Negative Scenarios:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Duplicate reference numbers are generated. 2. Reference is missing or incorrectly formatted. 3. Search by reference fails.	
MKTID.009	6	System	Enable users to request and process special remittance for accounts that meet specific conditions such as claims, renewal, installment due, or immediate OR issuance.	Expected Result: 1. Entry into Remittance once validated and approved: a. The request is tagged as Special Remittance. b. It flows into the Process Remittance. c. Accounts are grouped by remittance type, processor, and insurer. 2. Requestor and relevant teams receive status updates. Acceptance Criteria: 1. Invoice status is Unprocessed or Partially Remitted. 2. Paid AR is present and applied. 3. Check payment is cleared (3-day hold). 4. Notifications are triggered on status change. 5. Reports reflect accurate remittance data.	Must have.
MKTID.010		System	Facility to allow Marketing to perform and ensure the following: a. BIR Form 2307 certificates are properly tagged. b. BIR 2307 is selected and the correct withholding percentage is applied during AR/OR creation. c. CWT details are complete and accurate. d. Confirm whether the payment was already remitted to determine if the reversal should go to Unapplied Payments. e. If the payment was already remitted, Marketing must obtain written confirmation from the Insurer that the excess will be refunded.	Expected Result: 1. Integrating Marketing Collection BIR 2307 Reversal. 2. Marketing Collection properly tags and tracks certificates in the system. 3. If an outstanding CRU exists, the system allows PR 2307 reversal and release processing to continue while ensuring the transaction is flagged and routed for Commission Receivable processing. 4. All actions must be logged with user ID, timestamp, and reason for audit purposes.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			f. System checks whether there is any outstanding Commission Receivable (CRU) related to the same invoice or account to ensure commission recovery is not missed.		
MKTID.011		System	During quotation creation and conversion to policy, the system allows tagging of DP (Direct Payment).	Expected Results: Direct Billed / Direct Payments - Accounts tagged as DP are correctly reflected in the invoice and payment modules. - Payments are processed and matched against the correct invoice. Acceptance Criteria: - DP checkbox is ticked during quotation or policy creation - Invoice reflects direct payment status	Must have.
MKTID.012		System	Facility to automatically perform DP reversal only after validated DP tagging done by the Marketing team and successful collection of commission receivables to ensure accurate financial records and reduce manual errors in commission and premium reversals.	Expected Results: - The system should only trigger PR reversal when: - A valid DP tag is applied by the Marketing team. - The tagged entry flows into the Commission Receivable module. - The collection is confirmed and the schedule is uploaded. - The reversal should auto-match with the correct commission or premium portion. - Manual intervention and reliance on common files should be eliminated. Acceptance Criteria: - Then the system should validate the tag before it flows into the Commission Receivable module. - If valid DP tag and confirmed collection, the system should auto-reverse. - The system must log all reversal actions with timestamps.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. If the DP tag is missing or invalid, the system should not proceed with reversal and must notify the user. 5. The system must eliminate the need for manual file uploads. Negative Scenario: 1. Incorrect DP Tagging by Marketing.	

PRODUCTION RECON

Production Reconciliation

To establish a system-based facility that ensures the accuracy and completeness of booked production accounts through automated extraction and reconciliation processes.

This includes:

- Timely and complete resolution of discrepancies identified during reconciliation with Insurers.
- Automated extraction of booked accounts on a predefined schedule.
- Enabling users to view and manage extracted data.
- Providing functionality to upload production registers with Insurer feedback and reports of unbooked accounts.
- Allowing users to generate production reconciliation reports.
- Supporting manual extraction of production registers based on specified booking periods.

1. Data Extraction & File Management

- a. Automatically extract booked accounts per Insurer based on defined frequency.
- b. Manually extract production register based on specified booking period.
- c. Lock columns in extracted files except for editable fields (e.g., remarks).
- d. Auto-assign filenames and display file location, date, and time of extract.
- e. Generate a cover letter for each extract.
- f. Export file in agreed format.
- g. Send notification upon extract completion.
- h. Capture and store timestamp when report is sent to Insurer.
- i. Matching insurer reports with system data and managing discrepancies.

2. Production Register, Viewing & Filtering

- a. Accept and automatically upload production reports from Insurers.
- b. View accounts from extracted and uploaded files (Booked and Unbooked).
- c. Filter accounts by:
 - i. Production Month
 - ii. Insurer
 - iii. Account Officer / Broker (AO/AB)
 - iv. Booking Date
 - v. BDOI Location
 - vi. Market Segment
 - vii. Risk Code (Product Type)
- d. Allow User edits:
 - i. Add company concerned
 - ii. Add instructions or notations
- e. Reports with filtering options and visibility across reconciliation lifecycle.

3. Matching & Automation

- a. Match accounts from Booked to Pre-booked stage.
- b. Automatch accounts upon booking or upload.
- c. Automatch based on specific status and time.
- d. Consider accounts with discrepancy ≤ 1.00 as matched.
- e. Match based on key fields:

- i. Policy Number
 - ii. Reference/Invoice Number
 - iii. PN No.
 - iv. Policy Period
 - v. Commission Amount
 - vi. Premiums (Basic/Gross)
 - vii. Assured Name
- f. Tag matched/unmatched status upon upload.
- g. Create buckets per status:
 - i. Matched
 - ii. Matched with discrepancy
 - iii. Unmatched (Pre-booked / No booking)
- h. Block duplicate uploads and track attempts.
 - i. Automatic matching of insurer reports and system data.

4. Tracking & Monitoring

- a. View account history and status changes.
- b. Monitor upload status (Successful/Unsuccessful).
- c. Record number of upload attempts and status.
- d. Create repository of unmatched and duplicate accounts.
- e. Audit trail and dashboard integration for tracking.

5. Reports Generation

- a. Production Reconciliation Summary
- b. Summary of Unmatched Accounts:
 - i. Per Market Segment
 - ii. Per AO/AB
 - iii. Per Disposition
- c. Production Register:
 - i. With Insurer's Feedback
 - ii. With Marketing Feedback
 - iii. With Both Feedbacks
- d. List of Unbooked Accounts and Status
- e. Item count and extraction timestamp report
- f. Strategic reports for commission receivables and reconciliation.

PRODUCTION RECON**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
PRCID.001	1	System	Automatically Extract booked accounts per Insurer based on defined frequency. Note: Holidays should be considered. Extraction should be on the next working day.	Expected Result: System extracts booked accounts for each Insurer automatically based on the configured schedule. Acceptance Criteria: 1. Extraction occurs at the defined frequency. 2. Only booked accounts are included. Negative Scenario: Extraction fails due to incorrect frequency configuration. Extract includes unbooked accounts.	Must have.
PRCID.002	1	System	Facility to lock columns the extracted file except for the remarks column for the Insurer.	Expected Result: System should have facility to lock columns the extracted file except for the remarks column for the Insurer. Acceptance Criteria: Users can edit only the 'Remarks' column. Locked columns are not editable. Negative Scenario: 1. System fails to lock columns of the extracted file except for the remarks column for the Insurer. 2. Users can edit locked columns. 3. 'Remarks' column is locked mistakenly.	Must have.
PRCID.003	1	System	Generate a cover letter for each extract. The cover letter is the templated email that will be sent to the Insurer once the file is ready.	Expected Result: System should generate a cover letter for each extract. The cover letter is the templated email that will be sent to the Insurer once the file is ready. Acceptance Criteria: Cover letter includes the necessary information. Negative Scenario: Cover letter is missing or contains incorrect information.	Must have.
PRCID.004	1	System	Auto-assign filename to extract. Standard naming convention: TBD	Expected Result: System generates a filename using a standard naming convention.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: Unique filename is generated. Negative Scenario: 1. System fails to auto-assign filename to extract. 2. Filename is duplicated.	
PRCID.005	1	System	Display file location, date, and time of extract.	Expected Result: System shows metadata of each extract. Acceptance Criteria: Users can view location, date, and time. Negative Scenario: Metadata is missing or incorrect.	Must have.
PRCID.006	1	System	Generate file in agreed format or template.	Expected Result: File is generated in correct format. Acceptance Criteria: Format matches agreed template. Negative Scenario: File format is incorrect.	Must have.
PRCID.007	1	Operations	Facility to add password to the generated file.	Expected Result: 1. The User or system can apply a password to protect the file. 2. The password-protected file is securely stored or transmitted. 3. Only users with the correct password can open or access the file contents. Acceptance Criteria: 1. The password must meet defined and fall within standard complexity rules (e.g., minimum length, character types). 2. After applying the password, the system confirms that the file is protected. Negative Scenario: 1. User enters a password that doesn't meet complexity requirements. 2. File becomes unreadable after password protection due to system error. 3. User tries to open the file with the wrong password.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
PRCID.008	1	System	Facility to send extracted report to Insurer. Capture and store timestamp when extracted report is sent to Insurer.	Expected Result: Timestamp is stored when report is sent to Insurer. Acceptance Criteria: 1. Auto extraction of booked accounts per Insurer as per defined frequency completed. 2. Report is sent to Insurer. 3. Timestamp is logged in the system. Negative Scenario: Timestamp is not recorded or is incorrect.	Must have.
PRCID.009	1	System	Facility to receive and automatically upload production report from Insurer.	Expected Result: 1. System accepts and uploads the report automatically. 2. System separates accounts initially not part in the original extracted file but included in the uploaded file of Insurer. Acceptance Criteria: File is validated and uploaded without manual intervention. Negative Scenario: 1. File fails validation or upload process.	Must have.
PRCID.010	1	System	Facility to block duplicate upload	Expected Result: System detects and blocks duplicate files. Acceptance Criteria: System detects and prevents duplicates. Negative Scenario: Duplicate is uploaded.	Must have.
PRCID.011	1	Operations	Manually extract production register based on a specified booking period	Expected Result: System allows User to perform manual extract based on date range. Acceptance Criteria: 1. Extract includes only selected period. 2. Extraction matches specified period. Negative Scenario: Extraction fails or includes wrong period.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
PRCID.012	2	Operations	View accounts from extracted and uploaded files.	Expected Result: Users can view accounts from extracted file and uploaded file. Acceptance Criteria: All accounts are displayed correctly. Negative Scenario: Accounts are missing or incorrect.	Must have.
PRCID.013	2	System	Facility to filter and display accounts by production month and Insurer.	Expected Result: User is able to filter and view accounts. Acceptance Criteria: Display matches filter criteria. Negative Scenario: Filter fails or incorrect results.	Must have.
PRCID.014	2	System	Filter accounts by AO/AB for Booked and Pre-booked.	Expected Result: Accounts filtered by AO/AB. Acceptance Criteria: Correct accounts displayed. Negative Scenario: Filter does not work or shows wrong data.	Must have.
PRCID.015	2	System	Allow User to perform edit to: 1. Add company concerned 2. Add instruction or notation	Expected Result: Users can edit and add specified fields. Acceptance Criteria: Edits are saved and reflected in the system. Negative Scenario: Edits are not saved or fields are missing.	Must have.
PRCID.016	2	Operations	Capability to select the company concern from the list. <i>List – To be provided</i> There should be an option as “Others” to add the company concerned that is not on the list.	Expected Result: Company concern can be selected. Acceptance Criteria: List is available and selection works. Negative Scenario: List missing or selection fails.	Must have.
PRCID.017	2	System	Generate Production Register with Insurer's Feedback	Expected Result: User is able to generate Production Register with feedback is included. Acceptance Criteria: Feedback is visible and accurate.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: Feedback missing or incorrect.	
PRCID.018	2	System	Generate Production Register with both Insurer and Marketing's Feedback	Expected Result: System includes both Insurer and marketing feedback. Acceptance Criteria: Feedbacks are visible and accurate. Negative Scenario: Feedbacks missing or incorrect.	Must have.
PRCID.019	2	System	List of Unbooked Accounts and Status	Expected Result: System shows list unbooked accounts with current status. Acceptance Criteria: Statuses are accurate and updated. Negative Scenario: List is incomplete or incorrect.	Must have.
PRCID.020	2	Operations	View of Production Register of manually extracted booked accounts	Expected Result: System displays manually extracted data. Acceptance Criteria: Data matches manual extract. Negative Scenario: Data mismatch or missing.	Must have.
PRCID.021	2	System	Facility to filter by Booking Date, Insurer, BDOI Location, Market Segment, Product Type	Expected Result: Filters work across all views. Acceptance Criteria: Filters return accurate results. Negative Scenario: Filters return incorrect or no data.	Must have.
PRCID.022	3	System	Facility to upload matched data from Insurer based on their matching results. Criteria of account matching: 1. Policy Number 2. Reference Number/Invoice Number File shall contain unmatched data originally part of the file sent by BDOI and additional data not part of BDOI file but reflected as production of	Expected Result: Matched data is uploaded successfully. Acceptance Criteria: 1. Match criteria applied correctly. 2. System will automatically tag the account as matched. 3. Data is validated and integrated. 4. System will automatically tag the account accordingly. Negative Scenario: Upload fails or mismatches.	Must have.

				Acceptance Criteria: Status is displayed correctly. Negative Scenario: Status not shown or incorrect.	
PRCID.032	4	System	Record number of upload attempts and status.	Expected Result: System logs each upload attempt. Acceptance Criteria: Log includes timestamp, user, and status (e.g. success/failure). Negative Scenario: Records missing or incorrect. Upload attempts not tracked.	Must have.
PRCID.033	4	System	Create repository of unmatched and duplicate accounts	Expected Result: Centralized view of problematic accounts. Acceptance Criteria: Repository is searchable and filterable. Negative Scenario: Records missing or incorrect.	Must have.
PRCID.034	5	System	Generate a report that shows item count and extraction timestamp.	Expected Result: Report includes total item count and timestamp. Acceptance Criteria: Accurate count and correct timestamp are displayed. Negative Scenario: Count is incorrect or timestamp is missing.	Must have.
PRCID.035	5	System	Production Reconciliation Summary Report.	Expected Result: Summary report shows reconciliation status. Acceptance Criteria: Data is reconciled and summarized. Accurate summary of matched/unmatched accounts. Negative Scenario: Report contains errors or missing data.	Must have.
PRCID.036	5	System	Summary Report For Unmatched Accounts Per Location.	Expected Result: Report shows unmatched accounts by location. Acceptance Criteria: System is able to capture/filter the accounts of branches.	Must have.

				Location-wise breakdown is accurate. Negative Scenario: Incorrect location mapping or missing data.	
PRCID.037	5	System	Summary Report For Unmatched Accounts Per Marketing AO/AB.	Expected result: Report shows unmatched accounts by AO/AB. Acceptance Criteria: 1. Grouping of account is sorted according to AO/AB for booked and pre-booked accounts only. 2. AO/AB breakdown is correct. Negative Scenario: AO/AB data is misclassified.	Must have.
PRCID.038	5	System	Generate report of unmatched accounts with feedback and disposition	Expected Result: Report includes feedback and disposition. Acceptance Criteria: Report is exportable and accurate. Negative Scenario: Feedback is missing or mismatched.	Must have
PRCID.039	5	System	Summary Report Per Disposition.	Expected Result: Report summarizes accounts by disposition. Acceptance Criteria: Disposition categories are correctly reported. Negative Scenario: Disposition data is missing or incorrect.	Must have.

ADJUSTMENT / CANCELLATION

Adjustment / Cancellation

To have a comprehensive system designed to streamline the processing of endorsement requests, whether internal or external. It enables users to efficiently manage all types of endorsement transactions - financial, non-financial, and internal adjustments - on booked accounts. To have an efficient transaction workflow with appropriate approval mechanisms.

1. Endorsement Transaction Management

- a. Facility to perform single or multiple financial endorsement transactions for booked.
- b. Facility to perform single/multiple non-financial endorsement transaction for booked.
- c. Facility to perform batch posting of cancellation and adjustment.
- d. Facility to return problematic cancellation and adjustment request.
- e. System to generate an endorsement request number with the agreed format.

2. Financial Computation & Accounting Entries

- a. Create accounting entries for booked accounts based on financial endorsements type.
- b. System to set up AP Unapplied Payments (for applied payments) and AR Insurer (for remitted amount) resulting from Cancellation and Adjustment of Invoice.
- c. System to reverse or apply payments made for an account based on the latest premium and route any excess/unapplied payments for Marketing Disposition.
- d. Compute or re-compute premium, commission, refund premium, and sum insured per Insurer based on endorsement type or changes made in the account.
- e. Generate a Validation List showing all posted transactions with corresponding GL entries and adjustment remarks to support financial audits.

3. Documentation & Reporting

- a. Generate an Endorsement Slip for external endorsements to complete documentation.
- b. Generate Adjustment and Endorsement Reports as per:
 - a. Specified date range.
 - b. Report recipient with the identified key information to be included.
- c. Generation of Validation Slip.

4. Search, Traceability & History

- a. Link endorsement transactions with the original account reference number to maintain traceability.
- b. View aging of transactions based on submitted request date and completion date.
- c. Record and view endorsement transactions to ensure transaction history is accessible.
- d. Validate duplicate transaction notifications based on endorsement reference number, reason, invoice number, policy number, assured name and request type to avoid redundancy.
- e. Search facility using the Account Reference Number to pull-up policy details. (e.g. payment history and remittance)

5. Attachment & Supporting Documents

- a. Capability to accept attachment for the supporting documents.

ADJUSTMENT / CANCELLATION**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
ADJID.001	1	System	Facility to perform single or multiple financial endorsement transactions for booked accounts. Type of Endorsements - Financial Endorsement - Non-Financial Endorsement - Internal Adjustments	Expected result: - Users can initiate and complete one or more financial endorsement transactions for both booked accounts. - System is able to process single or bulk financial endorsement transactions for both booked accounts. - For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. - System should not allow adjustment submission when it is on Remittance queue Acceptance Criteria - User can select one or multiple accounts. - System allows financial endorsement types. - Transactions are saved and reflected in the account history. - Confirmation message is displayed upon successful transaction. Negative Scenario: - Attempting to endorse an account that is not booked. - Selecting multiple accounts with incompatible endorsement types. - System fails to save the transaction due to missing mandatory fields. - System allowed adjustment submission even when it is on Remittance queue.	Must have.
ADJID.002	1	Operations	Select the type of Financial Endorsement - Change of Total Sum Insured (Increase or Decrease) - Change in Insured Items, Persons/Members, Units, Locations - Change in Commission Rate (Increase or Decrease)	Expected Result: - User is presented with a list of financial endorsement types and can select the appropriate one for processing. Acceptance Criteria: - All listed endorsement types are available in the dropdown. - Selection triggers the appropriate input fields. - System validates and processes based on selected type.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			d. Change in Premium Rate (Increase or Decrease) or Premium Amount e. Extension of Cover (Period of Cover) f. Change of Cover g. Adjustment in Charges (DST, Premium Tax/VAT, LGT, others) - Increase or Decrease h. Minimal Balance	Negative Scenario: 1. User selects an endorsement type but leaves required fields blank.	
ADJID.003	1	System	Facility to perform single/multiple non-financial endorsement transaction for booked accounts.	Expected result: 1. System enables users to perform non-financial endorsements on selected accounts. 2. Users can process non-financial endorsements for one or more accounts. Acceptance Criteria: 1. User can select one or more accounts. 2. User can choose non-financial endorsement type. 3. System updates account details without affecting financials. 4. Changes are reflected in account details. 5. Transaction history is updated. Negative Scenario: 1. User tries to apply a financial change under a non-financial endorsement. 2. Financial entries mistakenly generated.	Must have.
ADJID.004	1	System	Types Non-Financial Endorsement 1. Descriptive Changes - free text which can be in relation to the assured information, person, risk or item insured, perils, coverage, extensions, warranties, clauses, deductibles, etc. 2. Change of Period Cover - moving the policy inception	Expected Result: 1. System supports all listed non-financial endorsement types with appropriate input fields and validations. 2. system allows Marketing to perform an update to include the non-financial endorsement changes. Acceptance Criteria:	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			to an earlier date or a later date. Note: Term is not changed. 3. Extension of Period Covered - with change in both inception and expiry date (move cover with no financial impact) 4. Extension of Cover - extensions of cover/clauses/warranties/deductibles are added but no premium will be charged. 5. Change of Assured Name (or other Assured information like address, birthdate & occupation. 6. Internal Adjustment for transactions without the need of an endorsement from Insurers.	1. Each type is selectable and triggers or accept flow-in relevant information. 2. System saves changes without affecting financials. 3. Internal adjustments are logged without Insurer involvement. Negative Scenario: 1. User inputs invalid date range for period change.	
ADJID.005	1	System	Facility to return transactions prior to batch posting. This is to check / verify those that are not qualified to be included in the batch posting of cancellation and adjustment.	Expected Result: 1. Users can review transactions before posting. 2. Users can mark transactions for return if they do not meet requirements. 3. Returned transactions are excluded from the batch posting. 4. A reason for return can be optionally recorded. 5. Returned transactions are flagged for further review or correction. Acceptance Criteria: 1. A "Return" option is available during the batch validation step. 2. Users can select one or more transactions to return. 3. Returned transactions are excluded from the final batch posting. 4. The system logs returned transactions with timestamps. 5. A summary report includes returned transactions and reasons. Negative Scenario:	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.006	1	System	Facility to perform batch posting of cancellation and adjustment.	1. Mistakenly returns a compliant transaction. Expected result: 1. Users can post multiple cancellation and adjustment transactions in a single batch. Acceptance Criteria: 1. Batch upload interface is available. 2. System validates each transaction before posting. 3. Summary report is generated post-batch. Negative Scenario: 1. Batch contains invalid or incomplete transactions. 2. System crashes during batch processing. 3. Duplicate transactions posted due to re-upload.	Must have.
ADJID.007	1	System	Facility to return problematic cancellation and adjustment request. (e.g. incomplete, erroneous, or request with discrepancies).	Expected result: 1. System allows users to return or reject problematic cancellation/adjustment requests with remarks and reason for return. Acceptance Criteria: 1. Users can flag and return requests with a reason. 2. A mandatory field for return reason is enforced. 3. Returned requests are logged and visible. 4. Notification is sent to the requester. Negative Scenario: 1. Return fails due to missing reason. System allows return of already processed requests.	Must have.
ADJID.008	1	System	Financial Endorsement conditions under Increase of TSI.	Expected result: 1. System checks if the increased TSI exceeds package limits and prompts for quotation or Insurer addition.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			- If increase would exceed the package TSI limit, system would trigger the User (Marketing AO) to prepare quotation request before allowing submission of endorsement. - With facility to add Insurer for the additional TSI that exceeds the capacity of the current Insurer/s. - For non-package, system should recompute percentage of share. Re-computation of percentage is on the endorsed sum insured. - Premium automatically increases based on the added TSI value and policy period.	2. System recalculates financial values accurately based on endorsement type or account changes. 3. For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. Acceptance Criteria: - System validates TSI against package limits. - If exceeded, User is prompted to prepare a quotation. - Option to add additional Insurer is available. - System recalculates Insurer share and premium based on new TSI and policy period. Negative Scenario: - User increases TSI beyond limit but system fails to prompt for quotation. - Recalculation overwrites original values without backup.	
ADJID.009	1	System	Financial Endorsement conditions under Decrease of TSI. - With facility to apply excess payment to another invoice. - Refund entry of any excess payment / commission linked to unapplied module. - Premium automatically decreases depending on the remaining TSI value and policy period.	Expected Result: - System allows application of excess payment to another invoice or processes refund. Premium is recalculated based on reduced TSI. - For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. Acceptance Criteria: - System recalculates premium based on new TSI. - Excess payment can be applied to another invoice or refunded. - Refund entries are linked to the unapplied module. Negative Scenario: - System fails to detect excess payment after TSI decrease.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Recalculation overwrites original values without backup.	
ADJID.010	1	System	Financial Endorsement conditions under Extension of Cover. With additional premium which will be subject for approval.	Expected Result: - System allows extension of cover with additional premium, subject to approval. Acceptance Criteria: - User can input new coverage dates. - System calculates additional premium. - Approval workflow is triggered before finalizing the endorsement. Negative Scenario: - User extends coverage but system does not calculate premium.	Must have.
ADJID.011	2	System	Create accounting entries for booked accounts based on financial endorsements type. Note: Auto computes with default accounting entries is done by Comptrollership.	Expected result: - System generates appropriate accounting entries for each financial endorsement on booked accounts. Acceptance Criteria: - Each financial endorsement triggers corresponding accounting entries. - Accounting entries match the endorsement type. - Entries are posted to the correct GL accounts. - Audit trail is maintained for each entry. Negative Scenario: - Endorsement type not mapped to any accounting rule. - GL account missing or inactive. - Duplicate entries created for a single endorsement.	Must have.
ADJID.012	2	System	System to set-up excess payment resulting from cancellation and adjustment.	Expected result: System identifies and sets up excess payments when cancellations or adjustments result in overpayment. Acceptance Criteria:	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Excess payment is calculated accurately. 2. Excess is tagged and stored for future disposition. 3. Linked to the correct account and transaction. 4. Notification is sent to relevant units. Negative Scenario: 1. Excess payment not calculated due to missing cancellation data. 2. System fails to tag excess correctly. 3. Excess payment is not recorded. 4. Excess amount is incorrectly applied to another account.	
ADJID.013	2	System	System to reverse applied payments made for an account based on the latest premium and route any excess/unapplied payments for Marketing Disposition. (e.g. Financial Endorsement Decrease of TSI)	Expected result: 1. Payments are reversed based on updated premium amounts, and any excess/unapplied payments are routed to Marketing for disposition. Acceptance Criteria: 1. System recalculates premium and adjusts payment application. 2. Excess/unapplied payments are flagged and routed correctly. 3. Transaction history reflects reversal/application. Negative Scenario: 1. Payment reversal fails due to locked accounting period. 2. Excess payment not routed due to missing disposition rules. 3. Incorrect premium used for recalculation.	Must have.
ADJID.014	2	System	Compute or re-compute premium, commission, refund premium, and sum insured per Insurer based on endorsement type or changes made in the account. (e.g. Change of Total Sum Insured (TSI), Increase of TSI, Extension of Cover, Change in Premium Rate)	Expected result: 1. System recalculates financial values accurately based on endorsement type or account changes. 2. If recalculation impacts income or commission, a Service Invoice is generated and linked to the adjustment. All changes are logged for audit. Acceptance Criteria: 1. Recalculation is triggered by endorsement. 2. Recalculation reflects updated values.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Breakdown per Insurer is shown. 4. Service Invoice is generated if income or commission is affected. 5. Audit trail of changes is maintained. Negative Scenario: 1. Incorrect formula used for computation. 2. Missing Insurer configuration.	
ADJID.015	3	User	Generate an Endorsement Slip for external endorsements. Note: This is a Marketing activity,	Expected result: 1. User initiates generation of endorsement Slip. 2. System generates a formal endorsement slip for documentation and external use. 3. No Endorsement Slip is generated for Internal Adjustment. Acceptance Criteria: 1. Slip includes all required fields. 2. Available for download or print. 3. Unique slip number generated. Negative Scenario: 1. Missing data on slip. 2. Slip generated with incorrect endorsement details.	Must have.
ADJID.016	3	System	Generate Adjustment and Daily Endorsement Reports to track daily activities.	Expected result: 1. System produces daily reports summarizing adjustments and endorsements. Acceptance Criteria: 1. Reports include all transactions for the day. 2. Filter by date, type, and user. 3. Exportable in standard formats. Negative Scenario: 1. Report includes duplicate entries.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Upload fails due to size or format. 2. Attachment not linked to transaction. 3. File corrupted during upload.	
ADJID.026		System	The system shall provide a facility to receive and process a file containing account records with minimal balances ranging from ≥ 10.00 to ≤ 100.00 . Based on system rules, these balances may be written off or credited. The system shall also validate invoice numbers and match them with PR (Payment Receipt) balances to either zero out or credit the accounts accordingly.	Expected Result: 1. The system successfully receives the file containing account balances between 10.00 and 100.00. 2. The system applies either a write-off or credit action based on predefined rules. 3. Invoice numbers are matched with PR balances. 4. If a match is found, the balance is zeroed out or credited 5. A summary report is generated indicating actions taken per account. Acceptance Criteria: 1. The system accepts and parses the input file format (e.g., CSV, Excel). 2. Only accounts with balances between 10.00 and 100.00 are considered. 3. If the balance meets the criteria, the system applies either a write-off or credit based on configuration. 4. The system logs the action taken for each account. 5. The system checks for matching invoice numbers and PR balances. 6. If a match is found, the balance is zeroed out or credited. 7. If no match is found, the account is flagged checking. Negative Scenario	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The uploaded file is not in the expected format (e.g., missing required columns). - Accounts with balances < 10.00 or > 100.00 are included and incorrectly processed. - Invoice numbers are missing or do not match any PR balances, leading to incorrect or failed processing. - The system applies incorrect actions due to misconfigured rules (e.g., credit instead of write-off). - Duplicate account entries cause multiple actions on the same balance.	
ADJID.027		System	Automate the allocation of adjustment amount on the per insurer percentage share. Note: The emphasis on this item should be on the adjustment amount and not on the payment application though it should be done on the Cashiering side under payment application.	Expected Result When a payment is made for a policy with multiple co-insurers, the system should automatically allocate the payment according to the percentage shares assigned to each insurer. This allocation should reflect in both the initial payment application and any subsequent adjustments. Acceptance Criteria: - Upon receiving a payment, the system must: - Automatically split the payment according to the configured percentages. - Record the allocation per insurer in the system. - Ensure only one invoice entry is created, with internal distribution handled by the system. - Any adjustments made to the payment must also follow the original percentage allocation. - The system must maintain a log of adjustments per insurer.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. The system incorrectly allocates the entire 100% to lead insurer, ignoring the configured percentages.	
ADJID.028		System	Facility to perform the following to address the over adjustment: 1. Setting a limit or baseline for allowable adjustments. 2. Tracking cumulative adjustments to ensure they do not exceed the original premium or DTIP. 3. Prompting users when an adjustment exceeds the allowable limit or results in a negative balance. 4. Preventing duplicate adjustments from being processed. Providing a review mechanism for previously applied adjustments.	Expected Result 1. The system should prompt users when an adjustment exceeds the baseline or results in a negative balance. 2. Duplicate adjustments should be flagged and blocked. 3. Users should be able to review previous adjustments before applying new ones. 4. The system should automatically total all adjustments and compare them against the baseline. Negative Scenario: 1. A user submits multiple incremental adjustments without realizing they are duplicating a previous entry. 2. The cumulative adjustment exceeds the original premium, resulting in a negative balance.	

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

Collection of Commission Receivables (Direct Payments)

To develop and implement an automated system that enhances the efficiency and accuracy of incentive and commission-related processes Retail and Corporate Accounts. This includes automating the calculation and validation of incentives based on production targets, as well as implementing fixed-amount incentive plan program, which incorporates minimum premium requirements and is intended for branch-level distribution. The system will also validate production data to exclude negative amounts and erroneous bookings, automate the processing of commission receivables, and streamline coordination with insurers for data validation. Additionally, it will establish a feedback timeline for insurer responses and generate comprehensive production reports segmented by branch and insurance company, with consolidated yearly data to support strategic decision-making.

1. Production Data Validation and Exclusion Handling

- a. Automatically identifies and excludes invalid production entries (e.g., negative amounts, erroneous bookings).
- b. Flags entries that violate exclusion criteria to prevent incorrect incentive payouts.
- c. Generates alerts for manual review when necessary.

2. Automated Incentive Calculation for Retail and Corporate Accounts.

- a. Automatically computes incentives based on production targets using predefined rates and multipliers.
- b. Supports dynamic incentive structures such as “No Touch” and “Top Up” programs.
- c. Ensures accurate application of rules across defined production periods (e.g., June–December).

3. Motor Mania Incentive Plan Implementation

- a. To adapt fixed incentive amounts based on revised arrangements with the insurer, recognizing that Service Level Agreements (SLAs) are time-bound and may be subject to renegotiation, potentially impacting the incentive structure.
- b. Supports transition from quarterly to annual incentive structures.
- c. Designed for branch-level incentive distribution.

4. Automated Commission Receivables Processing

- a. Consolidates raw files and insurer data to compute commission receivables without manual intervention.
- b. Reduces reliance on manual checks and improves data accuracy and timeliness.

5. Insurer Coordination and Feedback Tracking

- a. Automates sending of validation requests to insurers and tracks their responses.
- b. Monitors feedback timelines and flags delays beyond 10 working days to ensure timely resolution.

6. Comprehensive Production Reporting

- a. Generates detailed production reports by branch and insurance company.
- b. Consolidates yearly data including total production, estimated items, and performance against targets.
- c. Enables data-driven insights for strategic planning and performance evaluation.
- d. Strategic reports for commission receivables and reconciliation.

7. Risk Mitigation and Error Handling

- a. Negative Scenario Addressed:
- b. Misapplied multipliers or missing data leading to incorrect incentives.
- c. Incentives granted to ineligible policies.
- d. Manual intervention due to incomplete automation.
- e. Delayed or missed insurer feedback.
- f. Incomplete or inaccurate reporting due to missing data.

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
CMRID.001	1	System	Facility to access the files where Marketing – Collection Head Office and Branches identified Direct Payments (DP) transactions saved their DP list. Each folder is using a predefined file naming convention. Frequency: Integrate with Collection System	Expected Result: 1. All head office and branches submit DP lists consistently and on time, enabling centralized consolidation. 2. The DP tagging of Marketing-Collection flow-in to Commission Receivable module. 3. Handlers are able to generate the consolidated list (HO and Branches) of DP list as basis for billing. Acceptance Criteria: 1. Each head office and branch uploads a DP list on schedule. 2. File names follow the agreed file naming convention (e.g., BranchName_DP_YYYYMMDD). 3. Consolidation includes all submitted lists without duplication. Negative Scenario: 1. A head office or branch fails to submit its list. 2. File naming errors cause missed entries. 3. Duplicate entries across head office or branches are not flagged.	Must have.
CMRID.002	1	System	Capability to match DP entries against production reports and historical commission trackers. Validation checks must confirm full premium remittance, unpaid commission status, and data completeness.	Expected Result 1. DP entries are matched against production reports and historical commission trackers. 2. Validation ensures completeness and accuracy.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 100% of DP entries are checked for: - Fully paid to Insurer. - Commission payment status. - Data completeness and accuracy. - Discrepancies are flagged for review. - System to validate if there are Adjustment from the master record at the invoice level. Negative Scenario: - Premiums are not fully paid but still pass validation. - Commission already paid but listed again. - Missing or incorrect data (e.g., policy number, amount).	
CMRID.003	1	System	Automate validation of production data to detect criteria that should not be included such as negative amounts or erroneous bookings.	Expected Result: - Exclusion criteria for incentive eligibility are defined. - System flags and excludes invalid production entries automatically. - Incentives are not granted to policies that meet exclusion criteria. Acceptance Criteria: - System identifies and excludes those that should not be included and generates alerts for review. - System excludes policies based on predefined exclusion rules. Negative Scenario: - Invalid data not detected, leading to incorrect incentive calculations.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Incentives are incorrectly granted to excluded policies.	
CMRID.004	2		System must generate commission receivable reports that separate DP / Direct Bill and regular commissions, and handle partial remittances and net commission calculations.	Expected Result 1. System generates accurate commission receivable reports. 2. Differentiates DP from other commission types and handles partial remittances. Acceptance Criteria 1. Reports show: a. Direct Payment/Direct Bill vs Regular commissions. b. Net commission after partial remittance. 2. Reports are generated on schedule and are accurate. Negative Scenario: 1. DP commissions misclassified. 2. Partial remittances not calculated correctly. 3. Report generation fails or is delayed.	Must have.
CMRID.005	2	System	Automate calculation and validation of incentives for Retails and Corporate accounts based on production targets. No Touch and Top Up These incentives are based on achieving certain production targets, with corresponding rates and multipliers determining the equivalent percentage.	Expected Result: System calculates and validates incentives automatically based on defined targets and multipliers. Acceptance Criteria: System correctly applies rates and multipliers for production periods (e.g., June-December) and generates accurate incentive values.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Negative Scenario: Incorrect incentive calculation due to misapplied multipliers or missing production data.	
CMRID.006	3	System	Implement Motor Mania incentive plan with fixed amounts per policy and minimum premium requirements. It involves a fixed amount per policy (e.g., 500 pesos or 1000 pesos) with specific minimum basic premium requirements (e.g., 10,000 or 50,000). While initially discussed as quarterly, there's a plan to convert it to a yearly incentive program. It's designed to be passed on only and is intended for branches.	Expected Result: System applies fixed incentive amounts per policy based on premium thresholds. Acceptance Criteria: System validates minimum premium (e.g., 10,000 or 50,000) and applies correct incentive (e.g., 500 or 1000 pesos). 1. Negative Scenario: Incentives applied to policies not meeting minimum premium requirements.	Must have.
CMRID.007	4	System	Automate commission receivable.	Expected Result: System consolidates data and performs automated calculations for commissions. Acceptance Criteria: System processes raw files and insurer data to compute commission receivables without manual intervention. 4. Negative Scenario: Manual checks still required due to incomplete automation or data integration issues.	Must have.
CMRID.008	5	System	Facility to tag as DP account, auto-tagging of valid/invalid, audit trails for rejected accounts, and dropdown reasons for insurer feedback.	Expected Result 1. DP accounts are tagged appropriately in the system. 2. System supports auto-tagging, audit trails, and dropdown feedback reasons.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria 1. System auto-tags accounts e.g. "DP for billing" or "DP for confirmation". 2. Audit trail logs all rejected/returned accounts. 3. Dropdown reasons are available and used consistently. Negative Scenario: 2. System fails to auto-tag accounts. 3. Audit trail is incomplete or missing. 1. Feedback reasons are not selected or incorrectly tagged.	
CMRID.009	5	System	Facility to sort validated accounts by insurer and assigned to handlers for billing. Insurers must respond with either approval or rejection and reason.	Expected Result 1. Validated DPs are billed to insurers and monitored for response. 2. Insurers respond with either approval or rejection and reason. Acceptance Criteria 1. Handlers prepare and send billing within SLA. 2. Files are password protected. 3. Insurer responses are logged and categorized. 4. Facility to upload file from Insurer. 5. Valid accounts proceed to payment; invalid ones are returned with reason. 6. Flow-in to Collection System returned accounts with time stamp and reason. Negative Scenario: 1. Billing sent to wrong Insurer.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. No response from insurer within expected time. 3. Returned entries lack feedback reason.	
CMRID.010	5		System must track OR numbers and amounts, BIR certificate submissions, withholding tax, and all insurer feedback.	Expected Result: 1. System tracks all payment proofs, tax documents, and insurer feedback. 2. Complete audit trail and reporting of all financial and feedback data. Acceptance Criteria 1. OR numbers and amounts are logged. 2. BIR certificates and withholding tax submissions are tracked. 3. All insurer feedback is recorded and reportable. Negative Scenario: 1. Missing OR documentation. 2. BIR certificates not submitted. 3. Feedback from insurers not logged or lost.	Must have.
CMRID.011	5	System	Implement feedback timeline for insurer responses	Expected Result: Insurers provide feedback within 10 working days Acceptance Criteria: System tracks and flags feedback delays beyond 10 working days Negative Scenario: Feedback from insurers is delayed or not received.	Must have.
CMRID.012	6	System	Automate coordination with insurers for validation	Expected Result: System automatically sends validation requests and tracks responses	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: Validation requests are logged and responses are received systematically Negative Scenario: Manual coordination leads to missed or delayed validations	
CMRID.013	7	System	Facility to sanitize data via removing duplicate, invalid, or incomplete account. Only confirmed, fully paid DPs are eligible for billing.	Expected Result - Invalid or duplicate accounts are removed. - Only confirmed, fully paid DPs proceed to billing. - Sanitized and confirmed DP entries are clean and ready for billing. Acceptance Criteria - Sanitation as per criteria removes all invalid accounts. - Confirmation step verifies payment status before billing. Negative Scenario: - Duplicate accounts not removed. - Incomplete account mistakenly confirmed. - Valid accounts removed due to human error.	Must have.
CMRID.014	7	System	Generate production reports per branch and insurance company with consolidated yearly data.	Expected Result: System generates accurate and comprehensive production reports by branch and insurer. Acceptance Criteria: Reports include total production.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: Reports missing data from certain branches or insurers, leading to incomplete analysis.	
CMRID.015		System	Automated tracking and sending of BIR Withholding Tax Certificates. Currently, the submission of BIR withholding tax certificates from insurance companies is done manually, with transmittals acknowledged by Comptrollership through hardcopies. This process is prone to oversight and reconciliation issues. The proposed enhancement involves creating a system module that allows users to tag and submit BIR certificates linked to Official Receipts (ORs), enabling automated tracking and acknowledgment by Comptrollership.	Expected Result: - System allows Users to: - Select ORs issued by the cashier. - Tag corresponding BIR withholding tax certificates. - Submit these digitally to Comptrollership. - The system logs submission dates and acknowledgment status. - Comptrollership can view, acknowledge, and track submissions within the system. - Scanned copies of hardcopy documents can be uploaded and stored for reference. Negative Scenario: - The system prevents submission if no OR is linked. - If an incorrect OR is selected, Comptrollership can reject the submission with a reason. - The user receives a notification of rejection and can resubmit with the correct OR.	Must have.

ANNEX

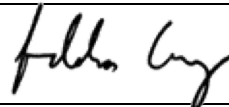

Approval

This document has been approved as the official Business Requirements Document for the OPERATIONS request.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase.

Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

BRD - OpsCentral_Addendum_Workshop - jmj approved.pdf

Hi Shellah and Zei,

Please see attached signed BRD.

As a note, please ensure the system's Audit Trail complies with IT's audit trail requirement. At the minimum, below information should be captured in the system's audit trail:

- Name of user that initiated the activity
- Event Type (Create, Edit, Delete, etc)
- System Module affected/accessed
- From and To values for the Event Type
- Origin of the event (computer or system details that accessed the system like IP, MAC address, terminal ID or other equivalent location information)
- Date and Time of the event
- Success or Failure indicator of the event

Thanks

Jose Melvin M. Jarin

Dear Team,

I am sending the updated BRD addendum reflecting the recent changes to the PR 2307 process, including the removal of cashiering from certificate handing and the addition of outstanding commission receivable checks.

Meeting Minutes for BRD Operations_UPDATED 04212026.docx

Kindly review the attached document and provide your sign-off by April 22, 2026 (Wednesday) to ensure timely project progression. Please let me know if you have any questions or require further clarification.

Impacted Business Requirement IDs

The Addendum specifically refines the following approved requirements:

- MKTID.010 – BIR 2307 handling and reversal determination logic
- MKTID.012 – Direct Payment (DP) reversal automation with strict preconditions
- MKTID.013 – Marketing tagging, validation, and reference number generation
- DBMID.001 – Disbursement validation, posting, and release controls

Deleted

- CSBHD.026 – Cashiering processing sequence for BIR 2307 transactions
- CSBHD.027 – Controlled reversal handling with remittance bypass

Thank you for your cooperation.

Best regards,

Subject: FOR SIGN-OFF: BRD for Operations: PR 2307 | Core Modernization

Dear Team,

Good day,

We are seeking your support and email sign-off/approval for the **Operations Central BRD – Addendum (BRD - OpsCentral Addendum Workshop.pdf)** to formally document refinements agreed during requirements workshops.

In accordance with SDLC guidelines, updates identified after the BRD walkthrough are managed through a **controlled Addendum** rather than re-issuing and re-routing the entire BRD. This approach ensures that specific changes and clarifications are clearly documented, traceable, and formally acknowledged through a focused sign-off, while maintaining the validity of the originally approved BRD. *Where applicable, agreements captured in the Minutes of Meeting (MofM) serve as official documentation of the agreements.* This method streamlines approvals, avoids redundancy, and preserves compliance and audit integrity.

Importantly, this Addendum **does not introduce new scope or functionality**. Its purpose is to translate previously implicit assumptions into **explicit, system-enforced rules**, addressing audit, risk, and implementation gaps surfaced during detailed discussions.

Impacted Business Requirement IDs

The Addendum specifically refines the following approved requirements:

- **MKTID.010** – BIR 2307 handling and reversal determination logic
- **MKTID.012** – Direct Payment (DP) reversal automation with strict preconditions

- **MKTID.013** – Marketing tagging, validation, and reference number generation
- **CSHD.026** – Cashiering processing sequence for BIR 2307 transactions
- **DBMID.001** – Disbursement validation, posting, and release controls

Deleted

- **CSHD.027** – Controlled reversal handling with remittance bypass

- Key Outcomes of the Addendum**
- Clear segregation of duties across Marketing, Cashiering, and Disbursement
 - Mandatory system decision logic and validation, reducing reliance on manual judgment
 - Enhanced audit trail, traceability, and failure-handling scenarios
 - Elimination of manual workarounds and file-based reversals

Thank you for your continued support.

Best regards,

ZEAN C. IBAY

Subject: Re: BRD for Operations: PR 2307 | Core Modernization

Good morning, Ms. @Zean C. Ibay.

Looking at the PR 2307 requirements across various BRDs, it seems that the existing process will be the same:

- Step 1: Marketing Collections will tag the PR 2307 for reversal
Step 2: Tagged accounts will flow to Cashiering for reversal
Step 3: Cashiering will trigger the reversal and route to Disbursement
Step 4: Disbursement will release the PR 2307 certificates to Insurers

I thought, this process will be changed so that Cashiering will no longer trigger the PR 2307 reversal.
From what I understand, this will be the process:
Step 1: Marketing Collections will tag the PR 2307 for reversal . System will automatically reverse the PR 2307 transactions. Entry will be posted once reversal is done.
Debit: PR 2307
Credit: PR

Step 2: Disbursement will release the PR 2307 certificates to Insurers. Upon tag of release of PR 2307 certificates, entries should be
Debit: DTIP
Credit: PR 2307

As discussed by Sir Rod dela Cruz during gap discussion with Comptrollership, the recommended process should be
Step 1: Marketing Collections will tag the PR 2307 for reversal . System will automatically reverse the PR 2307 transactions. Entry will be posted once reversal is done.
Debit: DTIP
Credit: PR

Step 2: Disbursement will release the PR 2307 certificates to Insurers. No entries will be generated.

These discussions are not reflected in the addendum BRD for Collection.

Please inform us which of the above processes for PR 2307 processing should we follow.

From Collections - Addendum BRD

Business Requirements Document

COLLECTIONS

BR ID	Previous BRID	Activity	Capability/ Requirement
BRCLXN.026	FRID-026	Batch Processing	The system should have a monthly batch process to generate file with disposition 'PR 2307 for reversal'. The system will have the necessary data and calculations to generate invoices with the specified disposition. Schedule Run: After EOD financial at 10:00PM
BRCLXN.027	FRID-027	File Generation	The auto-generated PR 2307 For Reversal file with disposition should be available to the authorized user every first working day of the month covering the disposition from first day to last day of the previous month
BRDTIP.028	EDITV.028	Batch Disbursement	The system should have a batch process to auto-generate as of and of Friday

From Operations - Cashiering BRD

Requirement are needed for Cashiering.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As «Persona», I must be able to					
MKTID.013		Marketing	Facility to tag Reversal Transactions for BIR 2307 and submit certificates received from clients. Processing that will flow-in to Cashiering.	Expected Result / Acceptance Criteria: 1. Reference numbers are generated and stored during reversal tagging. 2. Tagged transactions are accessible to Cashiering via reference number. 3. Data encoded is complete and accurate for validation.	Must have.
DBMID.001		Disbursement	Receive and process BIR 2307 Report. Receive sorted BIR 2307 certificates and supporting documents from Cashiering to be able to complete the financial posting and ensure Premium Receivable is zeroed out with correct accounting entries.	Expected Result / Acceptance Criteria: 1. Processed BIR certificate transactions are received from Cashiering. 2. BIR 2307 reports are received per insurer. 3. Certificates are sorted and complete. Supporting documents are complete and attached. 4. System reflects correct accounting entries i.e., - Debit PR2307, Credit PR or Debit DTIP, Credit PR2307 5. DTIP is reversed correctly in the system. 6. Release to insurers.	Must have.

CSHD.027		System	Facility to provide capability to Operations to process BIR 2307 reversals using reference numbers generated by Marketing. This is to validate the data, generate the transaction report, and route it directly to Disbursement without going through the Remittance function.	Expected Result: 1. The system allows the Cashiering to process BIR 2307 reversals using reference numbers generated form Marketing. 2. A BIR 2307 transaction report is generated, posted, and routed to Disbursement. 3. The Premium Receivable is zeroed out and appropriate accounting entries are created. 4. The process bypasses the Remittance function. Acceptance Criteria:	Must have.

Subject: BRD for Operations: PR 2307 | Core Modernization

Good afternoon, Ms. [@Zean C. Ibay](#),
We were informed that there will be no addendum BRD for Operations. With this, we would to inquire which addendum BRD does the PR 2307 process changes will be included.

If my understanding is correct, Cashiering recommended Marketing to tag the PR 2307. Tagging will then trigger the automated reversal. This will impact the accounting entries (Acceptance #8).

CSHD.027		System	Facility to provide capability to Operations to process BIR 2307 reversals using reference numbers generated by Marketing. This is to validate the data, generate the transaction report, and route it directly to Disbursement without going through the Remittance function.	Expected Result: 1. The system allows the Cashiering to process BIR 2307 reversals using reference numbers generated from Marketing. 2. A BIR 2307 transaction report is generated, posted, and routed to Disbursement. 3. The Premium Receivable is zeroed out and appropriate accounting entries are created. 4. The process bypasses the Remittance function. Acceptance Criteria:	Must have.
----------	--	--------	--	---	------------

				1. User can input a reference number generated during Marketing reversal tagging. 2. System displays reversal details upon valid input. 3. User can validate batch details against received CWT copies. 4. System generates a BIR 2307 transaction report after validation. Report is printable and ready for posting. 5. Report is posted and routed directly to Disbursement. 6. BIR certificates are sorted per insurer and forwarded. 7. Premium Receivable is zeroed out. 8. System creates correct accounting entries i.e., Debit PR2307, Credit PR or Debit DTIP, Credit PR2307. 9. User can attach supporting documents to the 2307 report.	
--	--	--	--	---	--

I am not sure if there are other discussions I missed regarding this.
Will wait for your feedback.
Thank you.
Abby

OPERATIONS - ADDENDUM

Business Requirements Document (BRD)

Prepared by: Business Project Services (BPS)

Strictly Confidential and for Internal Use of BDO only

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
12/18/2025	1.0	Addendum initial creation	Zean C. Ibay

Addendum¹: Business Requirements for Operations

Purpose

This addendum ensures that the Operations system requirements reflect the latest agreements and compliance needs, particularly regarding data integrity (exclusion vs. edit) and regulatory documentation (service invoice creation for financial adjustments). All changes are grounded in project walkthroughs and MOMs, and are now formally controlled and traceable as part of the project's governance process.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of Business Requirements

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.002	1	System	1. Facility to allow User to edit the extracted file online.	Expected Result: - The System allows users to open the extracted file. (e.g. grid/spreadsheet view) - Users can mark specific record or row for exclusion from further processing (e.g., remittance extraction), but cannot edit financial data (premium, commission, TSI, rates, etc.). - All exclusion actions are tracked with user, timestamp, and details, and can be reversed before submission. - When the file is pushed to Disbursement, only non-excluded data is included, and a complete audit trail of exclusions is maintained. - Data integrity controls ensure that financial values cannot be changed. Acceptance Criteria: - The online viewer provides clear controls on record or row exclusion and a summary of what will be excluded. - Attempts to change financial fields are not allowed. - The system displays a preview of the resulting dataset before submission. - Excluded data can be restored before final submission. - Only authorized users can perform exclusions; all actions are logged. Negative Scenario: - User attempts to edit financial fields (e.g. premium, commission, etc.) - Exclusions would remove mandatory fields required by downstream modules (e.g., policy number, valid reference).	Must have

² User could be but not limited to Marketing AO, TSU, Processing. User roles and authorization will be further defined in succeeding documentations.

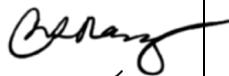

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. User without proper permissions tries to apply exclusions.	
ADJID.014	2	System	Compute or re-compute premium, commission, refund premium, and sum insured per Insurer based on endorsement type or changes made in the account. (e.g. Change of Total Sum Insured (TSI), Increase of TSI, Extension of Cover, Change in Premium Rate)	Expected result: 1. System recalculates financial values accurately based on endorsement type or account changes. 2. If recalculation impacts income or commission, a Service Invoice is generated and linked to the adjustment. All changes are logged for audit. Acceptance Criteria: 1. Recalculation is triggered by endorsement. 2. Recalculation reflects updated values. 3. Breakdown per Insurer is shown. 4. Service Invoice is generated if income or commission is affected. 5. Audit trail of changes is maintained. Negative Scenario: 1. Incorrect formula used for computation. 2. Missing Insurer configuration. 3. Recalculation overwrites original values without backup.	Must have.

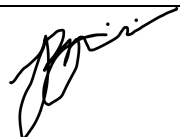

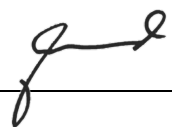

Approval

This document has been approved as the official Business Requirements Document for Operations.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Business Needs and Requirements

I. Executive Summary (What do you need?)

This initiative introduces a unified and system-driven platform that integrates critical BDOI Operations: Cashiering (Payments Acceptance and Application), Remittance, Production Reconciliation, Adjustment/Cancellation, and Collection of Commission Receivables (Direct Payment). The goal is to streamline workflows, automate key processes, and enhance accuracy, transparency, and auditability across all financial transactions. By consolidating these capabilities into a single system, the organization will significantly reduce manual workload, improve turnaround times, and ensure compliance with financial standards.

Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement (*attach the related law being addressed*)
- ☐ Customer Experience
- ☒ Others:

1. Unify BDOI Operations by integrating Cashiering (Payments Acceptance and Application), Remittance, Reconciliation, and Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment) workflows into a centralized system. This will be further integrated to the other systems where Operations receives or send data.
2. Automate key processes by reducing manual intervention through scheduled extractions, auto-matching, and batch processing.
3. Ensure financial accuracy by generating validated accounting entries and support audit requirements through system facility to perform computations and validations.
4. Enhance transparency and control by providing real-time tracking, search capabilities, and comprehensive reporting.
5. Support scalability and compliance by building a system that adapts to growing transaction volumes and regulatory standards.

b. Benefits

1. Automation across all modules reduces processing time and human error and ensures operational efficiency.
2. Improved accuracy and data integrity due to the validations, auto-matching, and audit trails.
3. Intuitive interfaces for transaction management, document uploads, and reporting.

4. comprehensive visibility due to real-time tracking and reporting across BDOI Operations and to systems it integrates with.
5. Detailed logs, validation slips, reconciliation summaries support internal and external audits, and regulatory compliance.
6. To address technology support and obsolescence.
7. To improve application accessibility through BDO's local network via browser-based implementation
8. To upgrade infrastructure portfolio for BDO to ensure efficiency and availability.
9. To conduct a business process review, capturing current business requirement and identify streamlining opportunities
10. To provide a system much more suitable for today's BDO insurance brokerage needs.

II. What is the current process? (Before)

1. Manual issuance of receipts, limited data in the reports for validation, payments details are not visible, and fragmented payment application.
2. Manual extraction and no tracking of remittance batches, having no facility to validate and identify those that are not for Remittance, and feedback integration.
3. Manual matching of booked accounts with Insurer reports, manual checking into unmatched items.
4. The current process includes several steps that have become redundant or unnecessary over time for the handling of financial and non-financial endorsements, manual computation, and limited traceability.
5. Dependency with IT Group to provide timely, correct and complete report.
6. Manual process of commission receivables from data gathering, sanitation and billing to insurer.

III. What is the envisioned process? (After)

1. Cashiering (Payments Acceptance and Application)

The Cashiering (Payments Acceptance and Application) is designed to deliver a seamless, automated, transparent financial transaction experience, ensuring that payment sources details are reflected. It enables efficient management of Acknowledgment and Official Receipts (AR/OR), with automated numbering and validation to ensure accuracy and compliance.

Supporting a wide range of payment types, the system ensures accurate currency handling and foreign exchange support. Payments may be applied manually or automatically, with full traceability.

Advanced search capabilities, audit trails, and intelligent error handling enhance User experience and accountability. Payments are matched to insurance entries during acceptance and categorized for clarity, while reporting tools offer aging, filtering, and Insurer-specific insights.

Automated journal entries and reconciliation features uphold accounting integrity, with built-in mechanisms to address minor discrepancies. Overall, the system drives operational efficiency, reduces manual errors, and provides real-time financial visibility.

2. Remittance

The Remittance process is designed to automate and streamline the extraction, validation, and tracking of remittance transactions across Insurers and remittance types. It ensures only valid, applied, and posted payments are extracted - excluding on-hold accounts - and assigns unique batch references for traceability.

Remittance data is extracted on schedule or manually by invoice, grouped by type, processor, and Insurer. Users can manage batches through submission, hold, or return actions, and generate remittance schedules and payment requests. The system facilitates Insurer coordination by exchanging OR details and supporting file uploads for OR updates.

Built-in validations ensure alignment with outstanding balances, while search and workflow tools support efficient tracking, approvals, and notifications. The full remittance lifecycle is monitored to ensure transparency, control, and operational efficiency.

3. Production Reconciliation

The Production Reconciliation automates and standardizes the reconciliation of booked and unbooked accounts across Insurers, ensuring accuracy and operational efficiency. It supports scheduled and manual data extraction, with secure, editable files and system-generated documentation for traceability.

Users receive notifications upon extraction, and uploaded Insurer reports are automatically matched against system data using key fields with built-in discrepancy tolerance. Accounts are categorized as matched, unmatched, or matched with discrepancies, with duplicate uploads blocked and tracked.

Advanced filtering and editable fields support tailored reconciliation, while a centralized repository maintains unmatched and duplicate records for audit and resolution. The system

generates comprehensive outputs - including summaries, feedback reports, and unmatched account lists - providing full visibility across the reconciliation lifecycle.

4. Adjustment/Cancellation

The Adjustment/Cancellation provides a flexible, accurate, and auditable framework for managing financial and non-financial changes to booked. It supports single and batch transactions, with automated accounting entries and intelligent handling of cancellations, adjustments, and excess payments.

Users can monitor transaction aging, generate endorsement slips, and access comprehensive reports. The system ensures traceability through unique reference numbers and full history tracking, while validations prevent duplicates and maintain data integrity.

Advanced search and document upload features support efficient processing, and all transactions are linked to original account references for transparency and control. Overall, the system enhances operational efficiency and ensures consistent, compliant endorsement management.

5. Collection of Commission Receivables (Direct Payment)

The Collection of Commission Receivables (Direct Payment) is designed to streamline the end-to-end process of calculating, validating, and reporting commissions. It ensures accuracy, compliance, and efficiency by automating complex commission structures, validating production data, and facilitating seamless coordination with insurers. The system supports both fixed and performance-based commission schemes, while also generating comprehensive reports for strategic decision-making.

The Collection of Commission Receivables (Direct Payment) focus on the proper handling of direct payments, and the ability to reverse related commission entries. This functionality is critical for maintaining traceability and compliance, and requires close collaboration with the Collection Marketing.

Additionally, this incorporates robust audit trail capabilities and aligns with regulatory standards.

NOTE: Each of these key functionalities will be supported by detailed business requirements, which will be defined in subsequent documentation to ensure clarity, alignment, and successful implementation.

IV. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRQID (ex: Key capability 1 should match with all BRQID1.#)

Business Key Capabilities:

1. Cashiering (Payments Acceptance and Application)
 - a. Receipt Issuance & Management
 - b. Search & Audit Trail
 - c. Validation & Error Handling
 - d. Reporting & Monitoring
 - e. Unapplied Payment & GL Integration
2. Remittance
 - a. Extraction & Remittance Processing
 - b. Sending and Uploading of File
 - c. Validation & Filtering Criteria
 - d. Search & View Capabilities
 - e. Hold Remittance Management
 - f. Notifications & Tracking
3. Production Reconciliation
 - a. Data Extraction & File Management
 - b. Production Register, Viewing & Filtering
 - c. Matching & Automation
 - d. Tracking & Monitoring
 - e. Reports Generation
4. Adjustment / Cancellation
 - a. Endorsement Transaction Management
 - b. Financial Computation & Accounting Entries
 - c. Documentation & Reporting
 - d. Search, Traceability & History
 - e. Attachment & Supporting Documents
5. Collection Commission Receivables (Direct Payment)
 - a. Automated Incentive Calculation for Retail and Corporate for Top up and CBG motor for No touch.
 - b. Motor Mania Incentive Plan Implementation
 - c. Production Data Validation and Exclusion Handling
 - d. Automated Commission Receivables Processing
 - e. Insurer Coordination and Feedback Tracking
 - f. Comprehensive Production Reporting
 - g. Risk Mitigation and Error Handling

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Business Requirements

Business Requirements					
BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.001	1	Operations	Access and log-in to the system.	Expected Result: Credential entered correctly. Acceptance Criteria: Able to access the system. Negative Scenario: System denies access.	Must have.
BRQID.002	2	System	Restrict access to authorized users so that only authorized personnel can access the system.	Expected Result: 1. Secure access control. Acceptance Criteria: 1. Only authorized users can log in. 2. Users must enter a valid credentials. 3. The system should deny access if the credentials are incorrect. Negative Scenario 1. Cannot log in to the system. 2. Unauthorized users attempt to access the system.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.003	3	Operations	Upon successful login, the system must immediately present the User with access to the Operations functionality, displayed prominently on the dashboard. The User must be able to select and view specific operational sections based on their role, preference, or task at hand. The system must ensure intuitive navigation, allowing users to switch between sections efficiently, with each section offering its full suite of functionalities, validations, reporting tools, ability to open a link to applications it integrates with.	Expected Result: Upon successful login: 1. The User is immediately presented with the Operations functionality on the dashboard. 2. The Operations section is prominently displayed and easily accessible. 3. Users can select and view specific operational sections based on their role, preference, or task. 4. Navigation between sections is intuitive and efficient. 5. Each section includes: a. Full suite of functionalities b. Validations c. Reporting tools d. Links to integrated applications Acceptance Criteria: 1. Operations functionality is visible and accessible immediately after login. 2. Users only see operational sections relevant to their role. Role-based permissions are enforced. 3. Users can customize or filter operational sections based on preferences or tasks. 4. Users can switch between sections. 5. Navigation and loading of sections occur within acceptable time limits (e.g., <5 seconds). Negative Scenario 1. User logs in successfully but Operations functionality is missing or not visible. 2. A User sees operational sections not intended for their role. 3. Clicking on a section leads to an error or blank page. 4. A section loads but lacks reporting tools or links to integrated applications.	Must have.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.004	4	System	Integrate with other systems / applications / modules to fetch or flow-in data. (i.e. Collection, Accounting, Disbursement, Marketing, Claims).	Expected Result: System successfully integrates with external systems (Collection, Accounting, Disbursement, Marketing, Claims). Acceptance Criteria: 1. Integration endpoints are established and tested for each external system. Negative Scenario: 1. Integration fails due to incorrect endpoint configuration or network issues.	Must have.
BRQID.005	5	System	Facility to fetch from other systems / applications / modules the necessary data that are required to flow-in to support Operations processes.	Expected Result: System automatically fetches relevant operational data in real-time or at scheduled intervals. Acceptance Criteria: 1. Data fetched includes all required fields to support operations (e.g., transaction details, claim status, marketing feedback). 2. Data is validated and correctly mapped to internal formats. 3. Fetching occurs without manual intervention, either on-demand or via scheduled jobs. 4. Logs are maintained for each data fetch operation, including timestamps and status. 5. System alerts users in case of failed data fetch or mismatched data. Negative Scenario: 1. Data fetched is incomplete, outdated, or incorrectly mapped. 2. System does not alert users when data fetch fails. 3. Duplicate or corrupted data is introduced into operational workflows. 4. Fetching from one or more systems is delayed, causing operational bottlenecks.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.006	6	System	Implement a batch job processing system that continues execution even if one or more records encounter errors during processing. The system must log failed records for future evaluation and potential reprocessing. Additionally, generate a comprehensive report summarizing the outcome of the batch run.	Expected Result: 1. The batch job processes all records in the input set. 2. Records that fail validation or processing are skipped, and the job continues with the remaining records. 3. Failed records are logged and compiled into a separate list for review. 4. A report is generated at the end of the batch run, detailing: a. Successful uploads b. Unsuccessful uploads c. Applied records d. Unapplied records e. Unsuccessful records Acceptance Criteria: 1. The batch job does not terminate when a record fails. 2. All valid records are processed successfully. 3. Failed records are captured with relevant error messages. 4. Failed records are stored in a separate log or database table. 5. A report is generated post-run with the following sections: a. Count and list of successfully uploaded records. b. Count and list of unsuccessfully uploaded records. c. Count and list of applied records. d. Count and list of unapplied records. e. Count and list of unsuccessful records. 6. The system allows for the failed records to be reviewed and optionally reprocessed.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario 1. A record in the batch contains invalid data (e.g., missing required fields or incorrect format). 2. The job encounters an error while processing this record. 3. Instead of stopping, the job logs the error, skips the record, and continues processing the remaining records. 4. The failed record appears in the "Unsuccessful" section of the report with a detailed error message.	

CASHIERING (Payments Acceptance and Application)

Cashiering (Payments Acceptance and Application)

To establish an efficient receipting and payment application system that ensures accurate and timely processing of payments, issuance of acknowledgment and official receipts, and comprehensive visibility into payment-related tasks.

1. Receipt Issuance & Management

- a. Enable creation, cancellation, and reinstatement of Acknowledgment Receipts (AR) and Official Receipts (OR).
- b. Auto-assign AR/OR numbers per transaction based on branch.
- c. Ensure system validation for AR/OR series depletion before transaction processing.
- d. Receipts reflects the received currency. Receipting will follow the received currency.
- e. Receipt issuance for commission and premium and non-premium payments.
- f. OR issuance for commission deducted from for remittance. There should be one OR per settlement batch per Insurer.
- g. Support multiple check details per official receipt as long as one Insurer / Payee (one certificate).
- h. For AR - Allow uploads for Bills, Trade, CLPC payments, matured PDC, Direct Credit (Batch processing).
- i. For OR - Service Fee Income, Insurance Profit Share, Commissions, Incentives, Others (discount).
- j. Support manual and auto payment application for premium payment application. If manual application - be able to apply one payment not only to one invoice but to various invoices
- k. Auto-generate transaction number for payment application reinstatement.

2. Search & Audit Trail

- a. Search facility by:
 - AR Number
 - OR Number
 - Client Number
 - Invoice Number
 - Payor Name
 - Assured Name
 - Amount
 - Date of Issuance
 - Policy Number
 - Insurer Name
- b. Audit Trail based on AR number and UserName.

3. Validation & Error Handling

- a. Validate and process Bills Payment files with required fields.
- b. Display clear error messages and prompt users for corrective actions.
- c. Match payments against booked, pre-booked, and AR insurance.
- d. Categorize applied and unapplied payments (pre-booked stage, none to apply it with).

- e. Apply payments based on defined hierarchy.

4. Reporting & Monitoring

- a. Generate reports with filtering options based on predefined fields (with aging).
- b. Generate reports in agreed formats with filtering based on predefined field values.
- c. Provide a facility to view outstanding accounts receivable per Client per Invoice.

5. Unapplied Payment & GL Integration

- a. Auto-create default journal entries for successfully uploaded transactions (applied and unapplied).
- b. Received Dollar/other currency will be logged as Peso based on conversion rate.
- c. Categorize records into pre-booked accounts and excess payments.
- d. Auto-create default GL entries in Peso currency.
- e. Allow processing of payment applications.
- f. Auto-reverse records with minimal balances (Php 10.00 and below) to AP overages.
- g. Provide disposition and flow-in information to Collection for processing of refund.

6. Unapplied Payment Disposition Facility

- a. Facility to maintain disposition type where User can view and provide disposition/s for unapplied payments.

CSHID.003	1	System	Facility to allow User to choose the reason for AR or OR cancellation.	Expected Result: 1. Users can select a reason for cancellation of AR or OR with appropriate validations and audit trails. Acceptance Criteria: 1. Users can select a reason for cancellation. a. For Premium, User selects any of the following: ○ Discrepancy in check amount ○ No signature ○ Incorrect payee ○ Check not picked-up ○ Incorrect check details provided by the client or Insurer ○ Others – reason that is not part of the initial list. b. For Commission, User selects any of the following: ○ Incorrect payment details	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				○ Negative VAT ○ Discount not applied c. PDC Retrieval / replacement. PDC is not yet due on maturity date. ○ For replacement ○ Pull out d. Bounced or returned check - Bounced check reinstatement does not require the form to be filled out. e. Error in issuance details. f. Error printing. g. Check not picked up. h. Double issuance. i. Others – reason that is not part of the initial list. Negative Scenario: 1. User attempts to submit without selecting a reason. 2. User selects an invalid or deprecated reason. 3. System fails to save the selected reason.	
CSHID.004	1	System	Facility to allow User to choose the reason for Reinstatement.	Expected Result: 1. Users can select a reinstatement reason from a predefined list when initiating a reinstatement request. Acceptance Criteria: 1. Users can select a reason for reinstatement. a. Premium payment reinstatement ○ Due to Cancellation ○ Mis-application of payment	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				○ Withholding Tax Adjustment ○ Others– reason that is not part of the initial list. b. Direct Payment Reinstatement ○ Due to double reversal ○ Due to wrong details of OR ○ Withholding Tax Adjustment ○ Due to Cancellation ○ Others– reason that is not part of the initial list. 2. The selected reason is saved and reflected in the transaction record. 3. The reason is mandatory before submission. 4. Journal entry is created. Negative Scenario: 1. User attempts to submit without selecting a reason → system should show a validation error. 2. User selects an invalid or deprecated reason → system should prevent submission. 3. System fails to save the selected reason → reinstatement should not proceed.	
CSHID.005	1	System	Facility to allow User to encode the required information for Reinstatement. 1. Premium Payment ○ Invoice number	Expected Result: 1. Users can select a reason and encode necessary details for reinstatement. Acceptance Criteria:	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			○ Acknowledgment Receipt number ○ Assured/Payor name ○ Amount reinstated ○ Account officer ○ Unit Head ○ Team Leader 2. Direct Payment ○ Invoice number ○ OR number ○ Assured/Payor name ○ Amount reinstated	1. Reason and required fields are mandatory. 2. Reinstated transaction reflects original details. Negative Scenario: 1. Missing fields → Reinstatement blocked.	
CSHID.006	1	System	Auto-assign AR/OR numbers per transaction based on branch. Note: OR issuance is exclusively done by HO.	Expected Result: 1. Each transaction is automatically assigned an AR or OR number based on the branch. OR numbers are only issued by the Head Office (HO). Acceptance Criteria: 1. The system auto-generates an AR/OR number based on the branch. 2. AR numbers are auto-assigned for branch transactions. 3. OR numbers are auto-assigned only for HO transactions. 4. Numbering follows a sequential or predefined format that will be generated upon posting. 5. System prevents OR issuance from non-HO branches. Negative Scenario: 1. A branch tries to issue an OR.	Must have

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Duplicate AR/OR numbers are generated. Transaction is saved without an AR/OR number.	
CSHID.007	1	System	Issue an individual OR per commission check or credited amount or multiple payments <i>in</i> one OR as long as one Insurer / Payee (one certificate). Source of data: 1. Uploaded commission payment details from collection. 2. Remittance Schedule.	Expected Result: 1. OR issued per commission check or multiple payments per Insurer/payee. Acceptance Criteria: 1. OR reflects correct payee and amount. 2. One OR per Remittance Batch number. 3. OR is issued per individual payment unless consolidation criteria are met. 4. Consolidation is allowed only if: a. Same Insurer/payee b. Same certificate 5. OR reflects all relevant payment details accurately. 6. System prevents consolidation if any criteria mismatch. Negative Scenario: 1. Payments from different Insurers/payees are consolidated → system should reject. 2. OR issued with missing or incorrect payment details → system should flag error. 3. Multiple payments with different certificates are combined → system should prevent this.	Must have
CSHID.008	1	System	For AR, allow uploads for Bills, Trade, CLPC payments, matured PDC, Direct Credit for batch processing.	Expected Result: 1. Files uploaded are in agreed format and file type. 2. Files are encrypted and cannot be edited.	Must have

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			Sources of files and file type: - Bills Payment: TXT (FS01) from IT-DCO - Trade Payment: TXT from CIB - CLPC Payment: EXCEL - PDC Payment file in excel for upload - Direct Credit: TXT FS01/04: All via batch process. Trade, Direct Credit, CLPC – manually prepared by BU, send to IT, IT to run batch process – FS04.	- Uploaded file should perform auto matching on the define auto matching frequency run. - For the PDC Payment: - System must have the facility to accept uploading of the list of received postdated checks for the day. - A system generated number is assign to the uploaded PDC. This is not the same with the AR. - List of uploaded PDCs are stored in a bucket or repository. - List can be generated and viewed by authorized User. - Once matured, system will automatically transact the payment for application and assigned corresponding receipt number. Once posted or applied, AR will be generated. - The system generated number must be traceable. Acceptance Criteria: - Issue AR to all uploaded accounts. - Bills Payment file to compose of the following: - Incremental # - Invoice # - Assured's Name - Amount - Yes or No (Late Deposit) - Phone #

				e. Payment Type f. Payor g. Account Ref No h. Assured i. EBIX_RefNo j. Logged By k. Requestor 7. Report on uploaded (applied, unapplied). 8. Unmatched items will flow in to unapplied premium payment bucket.	
CSHID.009	1	System	Facility to accept check with “for check pick up” from Collection.	Expected Result: When a collection effort is submitted with the status “for check pick”, the system will: 1. Automatically queue the account into the Cashiering Module. 2. Allow Cashiering to filter accounts based on the check pick-up date. 3. Automatically assign a unique acknowledgment receipt number to each account during the filtering/printing process. 4. Ensure that the receipt number is logged and traceable for audit purposes. 5. Display only accounts that are due for acknowledgment receipt printing. Acceptance Criteria: 1. Account with “for check pick” status is automatically queued in Cashiering Module.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Cashiering processor can filter accounts by check pick-up date. 3. Only accounts due for receipt printing are shown. 4. System assigns a unique acknowledgment receipt number automatically. 5. Receipt number follows the defined format and is logged. Negative Scenario: 1. Account with incorrect status (e.g., "for follow-up") is not queued. 2. Missing or invalid check pick-up date prevents filtering. 3. Duplicate receipt number causes system error. 4. Account fails to queue due to system integration issue. 5. Receipt number not assigned due to system failure. 6. Accounts not due for printing are incorrectly included in the filtered list.	
CSHID.010	2	Operations	Access and perform search using the following parameter: • AR Number • OR Number • Client Number • Invoice Number • Payor Name • Assured Name • Amount • Date of Issuance • Policy Number	Expected Result: 1. Users can access the search interface and successfully retrieve records using any of the listed parameters. 2. System returns accurate and relevant results based on the input criteria. Acceptance Criteria: 1. Search interface includes all listed parameters as filters or input fields. 2. Users can search using one or multiple parameters simultaneously.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			Insurer Name	3. Search results are displayed in a readable format with key details. 4. Results match the input criteria exactly or based on partial matches (where applicable, e.g., names). 5. System handles large volumes of data efficiently without timeouts. 6. Search facility should not impact performance of other functionalities. 7. Search logs are maintained for audit and troubleshooting. Negative Scenario: 1. Search returns no results despite valid input. 2. Results are inaccurate or unrelated to the search criteria. 3. System crashes or slows down during search operations. 4. Input fields are missing or not functioning. 5. Users are unable to perform multi-parameter searches. 6. Search results include duplicate or outdated records.	
CSHID.011	2	System	Facility to log in the Audit Trail the AR number and Username.	Expected Result: Every action involving an AR number is logged in the system's audit trail along with the corresponding Username, ensuring traceability and accountability. Acceptance Criteria: 1. Audit trail captures both AR number and Username for every relevant transaction or access. 2. Logs include timestamp, action performed, and system module accessed.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Audit entries are immutable and accessible to authorized personnel. 4. System allows filtering or searching audit logs by AR number or Username. 5. Audit trail is updated in real-time or near real-time. Negative Scenario: 1. AR number or Username is missing from the audit log. 2. Audit trail fails to record certain actions or transactions. 3. Logs are editable. 4. Audit trail is inaccessible or not searchable. 5. Incorrect Username is logged for a transaction.	
CSHID.012	3	System	Post Accounting entries once cancellation is posted.	Expected Result: 1. System posts appropriate accounting entries upon cancellation. Acceptance Criteria: 1. Journal entries are created and posted automatically. 2. System will handle the Peso conversion for journal entries or booking purposes. 3. Allow exchange rate with 2 decimal places. - Exchange rate computation refers to the Comptrollership exchange rate table. 4. Entries reflect correct currency conversion if applicable. Negative Scenario: Failure to post journal entries.	Must have
CSHID.013	3	System	Post Accounting entries once reinstatement is posted.	Expected Result:

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.015	3	System	Validate AR/OR series is not depleted before transaction processing.	Expected Result: 1. User cannot proceed with transaction if maintained series has been depleted. 2. System checks if AR/OR series is available before processing. Acceptance Criteria: 1. Transaction is blocked if series is depleted. 2. Error message is displayed. Negative Scenario: Series depleted → Transaction fails with error.	Must have
CSHID.016	3	System	Automatically reverse Premium Receivables with minimal balances and below (Php 10.00 and below) if not equal to the following: a. Two percent (2%) creditable withholding tax b. Amount of DST charged into the account c. Amount of the entire premium	Expected Result: The system should automatically reverse any financial record with a balance of Php 10.00 or below if the balance does not match the corresponding PR2307 balance. Ensure no duplicate reversals occur. Acceptance Criteria: 1. The system must refer to the "minimal balance" table. Maintenance: There should be reference to the minimal balance table. 2. The system identifies records with balances ≤ Php 10.00. It compares each record's balance with the corresponding PR2307 balance. 3. If the record's balance ≠ PR2307 balance, the system flags it for reversal.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Records with balances ≤ Php 10.00 that match PR2307 are not reversed. 5. Audit trail is logged. Negative Scenario: 1. System incorrectly reverses the record. 2. Same record reversed multiple times.	
CSHID.017	4	System	Facility to allow authorized Users to generate, download, or print reports.	Expected Result: System allows authorized Users to: 1. Access a reporting interface. 2. Select report parameters (e.g., date range, report type). 3. Generate reports dynamically. 4. Download reports in supported formats (e.g., PDF, Excel). 5. Print reports directly from the system. 5. Only users with appropriate permissions can perform these actions	Must have.
CSHID.018	4	System	Facility to allow selected Users to view generated report.	Expected Result: System allows Selected Users (based on roles or permissions) to: 1. Access a list of generated reports. 2. View report content in a readable format. 3. See metadata (e.g., report name, generation date, creator). 4. Be restricted from downloading or printing unless explicitly permitted. 5. Only users with viewing rights can access the report content.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.019	4	System	Facility to perform batch printing of AR / OR.	Expected Result: 1. Users can initiate a batch printing process for multiple ARs/ORs from a selected list or filtered criteria. (e.g. AR – per BDOI Location, OR – per Insurer) 2. The system generates print-ready documents for each AR/OR in the batch. 3. The system can save copies of the generated AR / OR. 4. The batch printing process is efficient, accurate, and logs the activity for audit purposes. 5. Users receive confirmation once the batch printing is complete, with options to reprint or download. Acceptance Criteria 1. Users can select multiple AR/OR records manually or via filters. 2. Selected records are clearly listed before printing. 3. Each AR/OR is formatted according to standards and includes necessary details. 4. The system sends all selected documents to the printer or generates a downloadable file. 5. Batch print completes within acceptable time limits (e.g., <10 seconds for 50 documents). 6. The system logs batch printing activity: user, timestamp, number of documents printed. 7. If any document fails to print, the system notifies the User and allows retry or skip. 8. Only authorized users can perform batch printing.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. A User without proper permissions attempts batch printing. 2. User initiates batch print without selecting any AR/OR. 3. One or more AR/OR documents are generated with missing or incorrect data. 4. Batch printing of a large number of documents causes system to hang or timeout. 5. Documents are generated but fail to reach the printer due to connectivity issues.	
CSHID.020	5	System	Perform matching at the point of payment acceptance except for issued PDC.	Expected Result: 1. Matching on Booked Accounts • Apply payment application on accounts with outstanding premium receivables only. • Payment > outstanding AR Balance, apply 100% of Outstanding balance except for accounts with 2% CWT, only 98% will be applied. • Any excess will be considered as Unapplied. 2. Unmatched on Booked Accounts and Matching in Pre-booked Accounts • Perform matching on pre-booked accounts and wait for booking. • Process re-run as per defined schedule. ○ Manually trigger (when needed) ○ Auto-trigger (batch schedule) • Processed accounts should no longer be available in the <pre-booked table>	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Unmatched on Booked and Pre-booked Accounts Tag as no match and will be considered as unapplied. 4. Excess Payments – Records where the payment amount exceeds the expected or invoiced amount. 5. Matched vs. cancelled booking/slips - Booking did push thru but Client uses the invalid reference number.	
CSHID.021	5	System	Facility to flow-in payment made from Insurer to AR Insurance. These are payment from Insurer that needs to be segregated from premium payments and expected to flow-in to AR Insurance.	Expected Result: 1. Automatically identified and segregated from premium payments. 2. Correctly routed to AR Insurance for reconciliation and accounting. 3. Reflected in AR Insurance with accurate status and traceability. Acceptance Criteria: 1. System must distinguish between premium payments and non-premium payments from insurers. 2. Non-premium payments must be posted to AR Insurance within the same business day. Negative Scenarios: 1. A premium payment is incorrectly routed to AR Insurance. 2. A non-premium payment is posted to premium accounts.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
CSHID.022	5	System	Apply payments based on defined hierarchy of payment application. Per Transaction Level hierarchy: 1. Premium Receivable - DST 2. Premium Receivable - Premium Tax (VAT) 3. Premium Receivable - LGT 4. Premium Receivable - Other Charges 5. Premium Receivable - Basic Premium Mode of Payment hierarchy: 1. Check - Cash	Expected Result: System applies payments to each transaction category in the defined order, using the highest-priority payment mode available.	Must have.
CSHID.023	4	System	Capability to generate reports. 2. See Cashiering Reports list under Annex.	Expected Result: The System is able to generate the needed reports. Acceptance Criteria: 1. Reports are generated with the expected format. 2. Reports are reflecting the data required. 3. Reports can be saved, downloaded, or printed by authorized Users. 4. Authorized User can view the reports.	Mush have.
CSHID.024	6	System	Facility where users can view and manage dispositions for unapplied payments, ensuring proper tracking, approval, and processing of various disposition types. Example of Disposition Types: • Apply to other invoice • DST payment application • Refund	Expected Results: 1. Users can easily assign and track dispositions for unapplied payments. 2. Approvals and reversals are systematically routed and logged. 3. Disposition types are configurable and auditable.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			- Reclass - Transfer to other marketing unit - Others (customizable)	4. Payments move between tabs based on their status and disposition. Acceptance Criteria: - Users can assign a disposition to any unapplied payment. - Payments move to the correct tab based on disposition status. - Dispositions requiring approval are routed to the correct approver. - All disposition actions are logged with user, timestamp, and action. - Users can update or correct dispositions before final processing. - Only authorized users can approve, reverse, or maintain disposition types. Negative Scenario: - Invalid disposition type selected. - Unauthorized user attempts approval. - Unauthorized user attempts update on disposition types.	
CSHID.025	6	System	Facility to display information as per Disposition Tabs - Unapplied - Displays payments with no disposition assigned. - Monitoring - Displays payments with disposition already assigned. - For Approval - Displays payments requiring Team approval.	Expected Result: - Users can view payment details and assign a disposition type. - Users can track status (e.g., pending, in process, completed) and view disposition history. - For approval is triggered by a disposition status.	Must have.

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			4. For Reversal - Displays payments marked for reversal (e.g., incorrect application).	4. View reversal reason, submit for processing and track reversal status.	
CSHID.026		System	Facility to receive tagged BIR 2307 data from Marketing Collection, process payments (cash or certificate), and remit accordingly. Issue ARs, reverse premiums, and forward transactions to Disbursement.	Expected Result / Acceptance Criteria: - System receives tagged BIR 2307 data from Marketing. - For cash payments: - AR is issued. - Premium is reversed. - Remittance is processed. - For certificate payments: - Certificate details are received from Marketing. - System reflects certificate status. - Transactions are sorted and forwarded to Disbursement.	Must have.
CSHID.027		System	Facility to provide capability to Operations to process BIR 2307 reversals using reference numbers generated by Marketing. This is to validate the data, generate the transaction report, and route it directly to Disbursement without going through the Remittance function.	Expected Result: - The system allows the Cashiering to process BIR 2307 reversals using reference numbers generated from Marketing. - A BIR 2307 transaction report is generated, posted, and routed to Disbursement. - The Premium Receivable is zeroed out and appropriate accounting entries are created. - The process bypasses the Remittance function. Acceptance Criteria:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. User can input a reference number generated during Marketing reversal tagging. 2. System displays reversal details upon valid input. 3. User can validate batch details against received CWT copies. 4. System generates a BIR 2307 transaction report after validation. Report is printable and ready for posting. 5. Report is posted and routed directly to Disbursement. 6. BIR certificates are sorted per insurer and forwarded. 7. Premium Receivable is zeroed out. 8. System creates correct accounting entries i.e., Debit PR2307, Credit PR or Debit DTIP, Credit PR2307. 9. User can attach supporting documents to the 2307 report. Negative Scenario: 1. Reference number is invalid or not tagged for reversal. 2. CWT copy is missing or mismatched. 3. Marketing data does not match actual CWT details. 4. Report fails to generate or print. 5. Posting or routing to Disbursement fails. 6. Incorrect accounting entries are created.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Requirement are needed for Cashiering.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
MKTID.013		Marketing	Facility to tag Reversal Transactions for BIR 2307 and submit certificates received from clients. Processing that will flow-in to Cashiering.	Expected Result / Acceptance Criteria: 1. Reference numbers are generated and stored during reversal tagging. 2. Tagged transactions are accessible to Cashiering via reference number. 3. Data encoded is complete and accurate for validation.	Must have.
DBMID.001		Disbursement	Receive and process BIR 2307 Report. Receive sorted BIR 2307 certificates and supporting documents from Cashiering to be able to complete the financial posting and ensure Premium Receivable is zeroed out with correct accounting entries.	Expected Result / Acceptance Criteria: 1. Processed BIR certificate transactions are received from Cashiering. 2. BIR 2307 reports are received per insurer. 3. Certificates are sorted and complete. Supporting documents are complete and attached. 4. System reflects correct accounting entries i.e., - Debit PR2307, Credit PR or Debit DTIP, Credit PR2307 5. DTIP is reversed correctly in the system. 6. Release to insurers.	Must have.

REMITTANCE

Remittance

To have a system for managing remittance-related processes, aimed at improving operational efficiency and reducing manual workload. It enables users to systematically handle various remittance transactions, including account extraction, processing, approval, and monitoring. The system also supports tracking of official receipts (ORs), uploading OR details, requesting marketing dispositions for returned ORs, and generating comprehensive reports.

1. Extraction & Remittance Processing

- a. Enable extraction per Insurer and per remittance type (With Incentives, Normal-Dollar, Normal-Peso).
- b. Facility to remove On Hold tagging of accounts to be included for extraction.
- c. Automate extraction based on predefined schedules.
- d. Ability to perform manual extract for specific invoice number per Insurer.
- e. Trigger extraction at end of day if payment application is searched.
- f. Extract only from applied and posted payments buckets.
- g. View extracted accounts.
- h. Group by remittance type, processor, Insurer, and batch number.
- i. Generate unique reference/batch numbers for each remittance extract.
- j. Transfer extracted accounts to process remittance and tag status accordingly.
- k. Submit accounts for remittance processing.
- l. Submit, hold, and return invoices or batch numbers.
- m. Print remittance schedule and payment request.
- n. Invoice-level remittance details and visibility of payment details.

2. Sending and Uploading of File

- a. Send Remittance Schedule to Insurer.
- b. Receive from Insurer populated Remittance Schedule with OR from Insurer for Client details (date and number).
- c. Upload file to system to update with OR from Insurer for Client details (date and number).

3. Validation & Filtering Criteria

- a. Paid AR should not be more than outstanding DTIP per remittance.
- b. Generate list of Paid AR that are higher and should be excluded from the extraction.
- c. Check payment status.
- d. Holding period.
- e. Ensure checks are at least 3 days old and cleared before inclusion.
- f. Validate check payment holding period and clearance.
- g. Validate remittance status upon submission.
- h. Facility to tag account as ON HOLD and to be excluded during extract.
- i. Exclude accounts on hold or with pending negative adjustments request.

- j. Exclude written-off accounts.
- k. Validation of remittance details and filtering in reports.

4. Search & View Capabilities

- a. Search accounts and payment details by invoice, or remittance batch number, endorsement reference number, policy number, assured name.
- b. View account/invoice details.
- c. View submitted accounts from Process Remittance.
- d. Visibility of payment details (dates, amounts, AR numbers) and user-friendly interface.

5. Hold Remittance Management

- a. View Hold Remittance regardless of the status.
- b. Exclude Hold accounts during extraction.
- c. Track Hold status and Remittance status.
- d. Status of remittances and adjustments.

6. Notifications & Tracking

- a. Notify users based on remittance and disbursement status.
- b. Notify Remittance Team of pending negative adjustments.
- c. Track remittance status across all stages.
- d. Auto-email notifications and dashboard integration for disposition tasks.

Operations

REMITTANCE

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
RMTID.001	1	System	Facility to allow extraction per Insurer and per remittance type (With Incentives, Normal-Dollar, Normal-Peso). Frequency: Off-peak execution. Batch Run: TDB	Expected Results: - System allows users to select an Insurer and Remittance type, and successfully extract relevant accounts. Acceptance Criteria: - User can select Insurer and remittance type from dropdowns or filters. - Extraction returns only accounts matching the selected criteria. - Extracted data includes correct remittance type tags. - System to save extracted data in a shared drive -with separate folders for each remittance type (Normal-Peso, Normal Dollar, and w/ Incentives). - Extract reflects the standard naming convention of files. - Exclude accounts that have pending financial endorsement (cancellation, decrease in TSI, decrease in comm, etc.) upon extraction. - Extract process does not impact the performance of the system. - System to send notification on the result of extract. Negative Scenario: - Extraction fails when remittance type is not selected - Incorrect Insurer selected returns unrelated accounts. - System extracts accounts with mismatched remittance types.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.002	1	System	Facility to allow User to edit the extracted file online.	Expected Result: - Edit the extracted file directly within the system - System to allow User to push to Disbursement extracted file (with or without edit). - Edited files are saved securely and changes are tracked. Acceptance Criteria: - Extracted file opens in an online editor (e.g., grid/spreadsheet view). - User can make changes and save them. - System validates and logs changes. - Edited file can be re-downloaded or submitted for further processing. - Data integrity is maintained during extraction and editing. Negative Scenario: - User edits file with invalid data (e.g., wrong format, missing required fields) - Edited file fails to save due to network or system error - User without proper permissions tries to access or edit extracted files	Must have
RMTID.003	1	System	Automatically extract based on predefined schedules and criteria.	Expected Results: - System performs automatic extraction at scheduled intervals without manual intervention. - Accounts that did not satisfy the remittance criteria shall remain in the repository tagged as not yet for remittance. Acceptance Criteria:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Scheduler is configurable by admin. - Extraction runs at set times and logs results. - Accounts are auto-tag accordingly: - Extracted- accounts met the specified criteria for extraction and were Included in the extract. - Unextracted not yet due for remittance- accounts that did not meet the specified criteria for extraction and are not yet due for remittance. - Unextracted due for remittance- accounts that did not meet the specified criteria for extraction and are due for remittance. - Returned - accounts met the specified criteria for extraction and were returned by user. Negative Scenario: - Scheduler fails to trigger extraction. - Extraction runs at incorrect times. - Extracted data is incomplete or incorrect.	
RMTID.004	1	Operations	Ability to perform manual extract for specific invoice number per Insurer.	Expected Results: Users can manually extract data for a specific invoice number tied to an Insurer. Acceptance Criteria: - Manual extract interface allows invoice number input. - Extracted data matches the invoice and Insurer. - System confirms successful extraction. Negative Scenario: - Invoice number not found or mismatched with Insurer.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Manual extract returns no data or incorrect data. - System allows extraction of invalid or unposted invoices.	
RMTID.005	1	System	Facility to search account and payment details per invoice or per batch(individual/batch) for the processing of remittance. Trigger extraction at end of day if payment application is searched.	Expected Results: System automatically triggers extraction when payment application is searched at end of day. Acceptance Criteria: - Payment application search logs trigger extraction. - Extracted accounts match payment application criteria - Extraction timestamp aligns with end-of-day schedule. Negative Scenario: - Extraction does not trigger after search. - Triggered extraction includes incorrect accounts. - System triggers extraction multiple times for same search.	Must have.
RMTID.006	1	System	Extract only from applied and posted payments buckets. Payments maybe in cash or in check and shall consider payment collection from all channels (e.g. Credit to Account, Automatic Debit Arrangement (ADA), Over-the-Counter from Cashiering, Bills Payment, etc).	Expected Results: System filters and extracts only accounts with payments that are both applied and posted. Acceptance Criteria: - Extraction excludes unposted or unapplied payments. - Extracted accounts show correct payment status. - Logs confirm payment status at time of extraction. Negative Scenario: - System includes payments that are pending or unposted. - Extraction fails due to missing status flags. - Applied payments are skipped due to incorrect tagging.	Must have.
RMTID.007	1	System	Group extract by remittance type, processor, Insurer, and batch number.	Expected Results: Extracted accounts are grouped logically based on remittance type, processor, Insurer, and batch number.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 1. Grouping options are available in the UI. 2. Accounts are correctly categorized under selected grouping criteria. 3. Batch numbers are unique and correctly assigned. 4. Extract can be downloaded by authorize User. 5. Extract is viewable to authorized User. Negative Scenario: 1. Accounts are grouped incorrectly or not grouped at all. 2. Duplicate batch numbers appear. 3. Processor or Insurer tags are missing or mismatched.	
RMTID.008	1	System	Generate unique reference/batch numbers for each remittance extract.	Expected Results: 1. Each remittance extract is assigned a unique reference or batch number. Acceptance Criteria: 1. Batch numbers are system-generated and non-repeating. 2. Reference numbers are traceable to extraction logs. 3. Users can search by batch/reference number. Negative Scenario: 1. Duplicate batch numbers are generated. 2. Reference numbers are missing or incorrectly formatted. 3. Batch number does not link to correct extract.	Must have.
RMTID.009	1	System	Transfer extracted accounts to Process Remittance and tag status accordingly.	Expected Results:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			Status: Review in process - Accounts that were system extracted and being reviewed by Processor on the Process Remittance.	1. Extracted accounts are moved to the remittance processing module with updated status tags. 2. Authorized user to have a Facility to re-assign to other Processor Acceptance Criteria: - Transfer is logged and confirmed. - Accounts show updated status. - No data loss during transfer. Negative Scenario: - Accounts fail to transfer. - Status tags are not updated. - Transferred accounts are duplicated or missing.	
RMTID.010	1	Operations	Submit accounts for remittance processing.	Expected Results: - Users can submit extracted accounts for remittance processing. Acceptance Criteria: - Submission triggers processing workflow. - Accounts are marked with the defined status for the submitted accounts. - Confirmation message is displayed. Negative Scenario: - Submission fails due to validation errors. - Accounts are submitted multiple times. - Submitted accounts do not appear in processing queue.	Must have.
RMTID.011	1	Operations	Print and save copy of remittance schedule and payment request.	Expected Results: System generates printable versions of remittance schedules and payment requests.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 1. Print option is available after submission. 2. Save option is available. 3. Printed documents include batch number, Insurer, remittance type, and payment details. 4. Format is consistent and readable. Negative Scenario: 1. Print function fails or generates incomplete documents. 2. Incorrect data appears on printed schedule 3. Print option is unavailable due to missing status.	
RMTID.012	2	System	Receive a populated remittance schedule from the Insurer. The received schedule must include the Official Receipt (OR) details for the client (date and number). The system should validate the integrity and authenticity of the received data.	Expected Result: 1. The schedule includes complete Official Receipt (OR) details for each client/invoice (OR date and OR number). 2. The system validates the integrity (completeness and format) and authenticity (source and data consistency) of the received data. 3. Validated data is stored and made available for further processing or display. Acceptance Criteria: 1. The system must be able to receive remittance schedules from the Insurer via a secure and predefined channel. (e.g. upload to System) 2. The received file must be in an accepted format. Negative Scenario: 1. The schedule is received without OR number or OR date.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The same OR number appears more than once for the same client. - The file format is incorrect or unreadable.	
RMTID.013	2	System	Accept and upload the received remittance schedule file. The upload process should update the system with the OR details for the client (date and number). The system should confirm the successful upload and update of the remittance schedule.	Expected Result: - The system reads and processes the file. - It extracts and updates the client records with the Official Receipt (OR) details (date and number). - The system confirms the successful upload and update to the User or admin. Acceptance Criteria: - The system provides a secure interface for uploading remittance schedule files. - Upon successful validation, the system updates the client records with the OR details. Negative Scenario: - User uploads a file in an unsupported format - File is missing OR number or OR date for one or more records. - File cannot be read due to corruption or incorrect structure.	Must have.
RMTID.014	3	System	Validate that paid AR is not be more than outstanding DTIP per remittance. Amount collected > DTIP, amount to be remitted should be equal to balance of the DTIP account.	Expected Results: System checks that Paid AR does not exceed DTIP before including in extraction. Acceptance Criteria: - Validation rule is enforced during extraction. - Accounts with Paid AR > DTIP are flagged and excluded. - Error message or log entry is generated.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Negative DTIPs are not included in the extract. Negative Scenario: - Accounts with excessive Paid AR are included. - Validation rule is bypassed or misconfigured. - Incorrect DTIP values cause false exclusions.	
RMTID.015	3	System	Generate list of Paid AR that are higher than the DTIP balance.	Expected Results: - System generates a report listing accounts with Paid AR exceeding DTIP. Acceptance Criteria: - Report includes invoice number, Insurer, Paid AR, and DTIP. - List is updated in real-time or per extraction run. - Excluded accounts are clearly marked. Negative Scenario: - Report is incomplete or missing accounts. - Accounts are listed but not excluded. - Paid AR and DTIP values are incorrectly calculated.	Must have.
RMTID.016	3	System	Upon uploading the data back into the system, an Exception Report shall be generated to validate the consistency between the Official Receipt (OR) amount and the corresponding Paid PR.	Expected Result: The system must: - Compare the OR amount against the paid PR for each transaction. - Identify and list all records where discrepancies exist (i.e., mismatched amounts). - Categorize the upload results into: - Successful uploads – records with matching OR and paid PR amounts. - Unsuccessful uploads – records with mismatched amounts.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - The Exception Report must be automatically generated after each upload. The report must include: - Transaction ID or reference number - OR amount - Paid PR amount - Status (Successful / Unsuccessful) - Reason for failure (for unsuccessful uploads) - A summary of successful and unsuccessful uploads must be displayed. - The Exception Report must be downloadable in a standard format (e.g., Excel or PDF). - It must be accessible from the upload history or audit trail section.	
RMTID.017	3	System	Ensure checks are at least 3 days old and cleared before inclusion to the extract. (Holding period)	Expected Results: - System verifies that check payments are at least 3 days old and have cleared before including them in extraction. - Days include banking days only. Acceptance Criteria: - Checks younger than 3 days or uncleared are excluded. - Validation is applied during extraction. - Cleared status is visible in payment details. Negative Scenario: - Checks under 3 days old are included. - Cleared status is not properly validated.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. System includes checks with pending clearance.	
RMTID.018	3	System	Validate check payment holding period and clearance	Expected Results: 1. System confirms both the age and clearance status of check payments before processing. Acceptance Criteria: 1. Holding period and clearance status are checked together. 2. Only eligible checks are processed. 3. Validation logs are generated. Negative Scenario: 1. Checks are processed without clearance. 2. Holding period is miscalculated. 3. Validation fails.	Must have.
RMTID.019	3	System	Validate remittance status upon submission. 1. Approved 2. Review In Process 3. Requested For Hold 4. Unapplied Payment 5. Outstanding Balance 6. Unprocessed 7. Fully Remitted 8. Partially Remitted	Expected Results: System checks remittance status before allowing submission.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria		Priority Level
				Status	Description	
				Approved	Account has been approved and forwarded to the Disbursement module. No longer editable.	
				Review in Process	Account is being reviewed by the Remittance Processor.	
				Requested for Hold	Account has a pending hold request. Linked to Hold Remittance tab.	
				Unapplied Payment	Payment received but not yet applied.	
				With Outstanding Balance	Account has uncollected premium. Refer to Cashiering Module for payment status.	
				Unprocessed	Account not yet included in any extract. May have pending adjustments, unapplied payments, or not yet due for remittance.	
				Fully Remitted	Account has been paid in full. DV number assigned. No outstanding DTIP balance.	
				Partially Remitted	Partial payment has been processed. DV number assigned. Outstanding DTIP balance remains.	
				Acceptance Criteria: 1. Only remittances with valid status can be submitted. 2. Invalid statuses trigger error messages. 3. Status is updated post-submission. Negative Scenario: 1. Remittances with invalid status are submitted. 2. Status does not update after submission. 3. Submission bypasses validation.		
RMTID.020	3	System	Exclude accounts on hold or with pending negative adjustments request.	Expected Results: Accounts with “On Hold” status or pending negative adjustments are excluded from extraction.	Must have.	

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Both conditions are checked during extraction. - Excluded accounts are listed in a report. - Extraction includes only eligible accounts. Negative Scenario: - Pending adjustments are ignored. "On Hold" accounts are not excluded. - System fails to identify pending adjustment status.	
RMTID.021	3	System	Facility to process as part of Remittance an account when indicated holding dates expired or ended.	Expected Result: - The system should allow processing of accounts after their designated holding dates. - Information on the hold account will flow-in from Marketing. Acceptance Criteria: - The system allows processing of accounts past their holding date. - All updates are logged with timestamp. - Reports and dashboards reflect accounts processed beyond hold dates.	
RMTID.022	3	System	Exclude written-off accounts.	Expected Results: - The system should exclude all accounts marked as written-off from the extract. Acceptance Criteria: - Accounts with a status or flag indicating "written-off" are excluded from all relevant outputs.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Written-off accounts remain accessible in audit logs or detailed views, but are clearly marked and excluded from extract. Negative Scenario: 1. Written-off are included.	
RMTID.023	3	System	Automate additional incentive early remittance to Insurer.	Expected Result: System to compute additional incentive for early remittance within 30 days from inception. Acceptance Criteria: System checks remittance date and applies incentive only if within 30-day window. Negative Scenario: Incentive applied despite late remittance or missing insurer data.	Must have.
RMTID.024	4	System	Allow User to view extracted accounts.	Expected Results: 1. Users can view a list of accounts that have been successfully extracted. Acceptance Criteria: 1. Extracted accounts are displayed in a searchable and filterable list. 2. Each account shows relevant details (e.g., Insurer, remittance type, batch number). 3. View reflects real-time extraction results. Negative Scenario:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Extracted accounts not visible due to UI or backend errors. 2. View shows outdated or incorrect data. 3. Filters do not work as expected.	
RMTID.025	4	System	Allow User to search accounts and payment details by: • Invoice Number • Remittance batch number • Endorsement reference number • Policy number • Assured name.	Expected Results: Users can search for accounts using multiple identifiers. Acceptance Criteria: 1. Search fields are available and functional. 2. Results match entered criteria. 3. Partial and exact matches are supported. Negative Scenario: 1. Search returns incorrect or no results. 2. Fields are missing or non-functional. 3. Search is case-sensitive or format-dependent.	Must have.
RMTID.026	4	Operations	View account/invoice details.	Expected Results: 1. Users can view detailed information for each account or invoice. Acceptance Criteria: 1. Details include payment status, remittance type, Insurer, and history. 2. View is accessible from search results. 3. Data is accurate and up-to-date. Negative Scenario: 1. Details are missing or incorrect. 2. View fails to load. 3. Users see unauthorized data.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
RMTID.027	4	Operations	View submitted accounts from Process Remittance.	Expected Results: Users can view all accounts submitted for remittance processing. Acceptance Criteria: - Submitted accounts are listed with status and batch information. - View is updated in real-time. - Filters and sorting are available. Negative Scenario: - Submitted accounts are not visible. - View shows outdated or incorrect data. - Filtering fails.	Must have.
RMTID.028	4	Operations	Check payment status	Expected Results: - System validates payment status before extraction or processing. Acceptance Criteria: - Only payments with valid statuses (e.g., posted, cleared) are processed. - Invalid or pending statuses trigger exclusion. - Status is visible in account details. Negative Scenario: - Payments with invalid status are processed. - Status field is missing or incorrect. - System fails to update payment status in real-time.	Must have.
RMTID.029	5	Operations	Submit, hold, and return invoices or batch numbers.	Expected Results: Users can submit invoices or batch numbers for processing, place them on hold, or return them for correction.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Submission updates status. - Hold action tags invoice/batch. - Return action updates status and logs reason. - All actions are logged and traceable. Negative Scenario: - Invoices are submitted without validation. - Hold or return actions fail due to missing permissions. - Returned invoices are not removed from processing queue.	
RMTID.030	5	Operation	View special remittance request.	Expected Results: - System flow-in special remittance details from Marketing Collection. - Users can view special remittance requests. Acceptance Criteria: - Special remittance requests are visible with status and details. Negative Scenario: - Special Remittance requests are not visible. - View fails to load or update. - Status does not reflect actual progress.	Must have.
RMTID.031	5	System	Exclude active hold accounts during extraction	Expected Results: Accounts with active hold status are automatically excluded from extraction. Acceptance Criteria: - Hold status is checked during extraction. - Excluded accounts are listed in logs. - No manual filtering required.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: - Active hold accounts are included. - Hold status is not recognized. - Exclusion logic fails intermittently.	
RMTID.032	6	System	Track hold status and remittance status	Expected Results: System tracks and displays both hold and remittance statuses for each account. Acceptance Criteria: - Statuses are visible in account view. - Updates are logged and timestamped. - Users can filter by status. Negative Scenario: - Statuses are outdated or incorrect. - Tracking fails for certain accounts. - Filters do not work.	Must have.
RMTID.033	6	System	Notify users on status changes (returned, approved, on hold, etc.)	Expected Results: - Users receive notifications when the status of a special remittance request changes. Acceptance Criteria: - Notifications are triggered on each status change. - Message includes reference number and new status. - Delivery is confirmed (email, dashboard, etc.). Negative Scenario: - Notifications are delayed or not sent.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Incorrect status is communicated. - Users do not receive updates.	
RMTID.034	6	System	Notify users based on remittance and disbursement status	Expected Results: Users receive updates when remittance or disbursement status changes. Acceptance Criteria: - Notifications are timely and accurate. - Status changes are logged. - Users can configure notification preferences. Negative Scenario: - Notifications are missed or duplicated. - Incorrect status is sent. - Users cannot opt out.	Must have.
RMTID.035	6	System	Notify Remittance Team of pending negative adjustments	Expected Results: Remittance Team is alerted when negative adjustments are pending. Acceptance Criteria: - Notification includes affected accounts and adjustment details. - Team receives alerts via preferred channel. - Notification is logged. Negative Scenario: - Team is not notified. - Notification lacks detail. - Alerts are sent to wrong recipients.	Must have.
RMTID.036	6	System	Track remittance status across all stages	Expected Results: System tracks remittance status from extraction to disbursement.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: - Status updates are visible and timestamped. - Users can view history and current stage. - Tracking is consistent across modules. Negative Scenario: - Status is not updated. - Tracking fails for certain batches. - History is incomplete.	
RMTID.037	6	System	Track estimated items in production reports.	Expected Result: Estimated items are included and flagged in production reports. Acceptance Criteria: Reports show estimated items separately with appropriate labels. Negative Scenario: Estimated items are omitted or misclassified in reports.	Must have.
RMTID.038		System	Capabilities to include, record, update remittance details at the invoice level and ensure visible payment histories including dates, amounts, and AR numbers.	Expected Result: - Users can add, edit, and view payment application details directly at the invoice level. - The system maintains a clear and complete payment history for each invoice, including: Payment dates, Amounts applied, Associated AR. - Updates to payment applications are reflected in real-time and are traceable.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Users can audit and reconcile payments efficiently using the visible history. Negative Scenario: 1. Payment applications are recorded but not visible on the invoice.	
RMTID.039	4	System	Capability to generate reports. See Remittance Reports list under Annex.	Expected Result: The System is able to generate the needed reports. Acceptance Criteria: 1. Reports are generated with the expected format. 2. Reports are reflecting the data required. 3. Reports can be saved, downloaded, or printed by authorized Users. 4. Authorized User can view the reports.	Must have.
RMTID.040		System	Facility to ensure proper coordination and sequencing of invoice adjustments, remittance exemptions, and accounting entries. The system should include locking mechanisms, status indicators, and approval workflows.	Expected Result: 1. Accurate accounting entries based on finalized remittance status. 2. Prevention of conflicting transactions through locking and coordination. 3. Timely and traceable approval and adjustment processes. 4. Clear visibility of invoice status across units. Acceptance Criteria: 1. Invoice entries are locked during remittance or when still with comptrollership to prevent simultaneous edits. 2. Users can view current status (e.g., "In Remittance," "Pending Adjustment," "Locked for Editing"). 3. Relevant users are notified when an invoice is being handled by another unit.	Must have.

Business Requirement Document

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

Operations

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. All actions (adjustments, exemptions, approvals) are logged with timestamps and User Name. Negative Scenarios: 1. Multiple users edit the same invoice without coordination, causing data conflicts. 2. Adjustment is made but not approved in time, delaying remittance and causing reporting issues. 3. Users are unaware of ongoing transactions, leading to duplicate or conflicting actions.	

Marketing activities that are needed for Remittance.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
MKTID.001	2	Marketing	Facility to initiate a request to send a remittance schedule to the Insurer. The request must include necessary client details (e.g., client ID, amount, date). The system should confirm the successful sending of the remittance schedule to the Insurer.	Expected Result: 1. The system captures all necessary client details (e.g., client ID, amount, date). 2. The system validates the input data. 3. The remittance schedule is successfully sent to the Insurer. 4. A confirmation message is displayed to the indicating successful transmission. Acceptance Criteria:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. System validated necessary client details (e.g., client ID, amount, date). 2. System confirms that the remittance schedule is successfully sent to the Insurer. Negative Scenario: 1. User submits the request without entering the client ID, amount, or date. 4. User tries to send the same remittance schedule multiple times.	
MKTID.002	5	Marketing	Facility to remove On Hold tagging of accounts to be included for extraction.	Expected Results: Users can remove "On Hold" status from accounts, making them eligible for extraction. Acceptance Criteria: 1. "On Hold" accounts can be updated to new status tagging. 2. Updated accounts appear in extraction results. 3. Audit trail logs the status change. Negative Scenarios: 1. System allows extraction of accounts still tagged as "On Hold". 2. Removal fails due to permission issues. 3. Account status changes but does not reflect in extraction.	Must have.
MKTID.003	5	Marketing	Tag account as ON HOLD and to be excluded during extract.	Expected Results: Users can tag accounts as "On Hold", preventing them from being extracted.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 1. "On Hold" tag is available and functional. 2. Tagged accounts are excluded from extraction. 3. Tagging action is logged. Negative Scenarios: 1. "On Hold" accounts are still extracted. 2. Tagging fails or is not saved. 4. Users without permission can tag accounts.	
MKTID.004	5	Marketing	Assign approved hold requests to remittance processors.	Expected Results: Approved hold requests are assigned to designated processors for tracking and resolution. Acceptance Criteria: 1. Assignment interface is available. 2. Processor receives notification and access. 3. Assignment is logged and traceable. Negative Scenarios: 1. Requests are assigned to incorrect or inactive processors. 2. Assignment fails or is not saved. 4. Processor cannot access assigned requests.	Must have.
MKTID.005	5	Marketing	Create, cancel, and extend hold remittance requests	Expected Results: Users can manage hold requests by creating, canceling, or extending them. Acceptance Criteria: 1. Actions are available based on user role.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Status updates reflect changes. 3. History of actions is logged. Negative Scenarios: 1. Cancel or extend actions fail. 2. Hold requests are duplicated. 4. Status does not update correctly.	
MKTID.006	5	Marketing	Approve hold requests and cancellations	Expected Results: Authorized users can approve hold requests and their cancellations. Acceptance Criteria: 1. Approval workflow is enforced. 2. Notifications are sent upon approval. 3. Status changes are logged. Negative Scenarios: 1. Unauthorized users can approve requests. 2. Approval fails due to system error. 3. Cancellation is approved but not executed.	Must have.
MKTID.007	5	Marketing	Generate unique reference numbers for hold requests	Expected Results: Each hold request is assigned a unique reference number. Acceptance Criteria: 1. Reference numbers are system-generated and non-repeating. 2. Users can search by reference number. 3. Reference is linked to request details. Negative Scenarios:	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Duplicate reference numbers are generated. 2. Reference is missing or incorrectly formatted. 3. Search by reference fails.	
MKTID.009	6	System	Enable users to request and process special remittance for accounts that meet specific conditions such as claims, renewal, installment due, or immediate OR issuance.	Expected Result: 1. Entry into Remittance once validated and approved: a. The request is tagged as Special Remittance. b. It flows into the Process Remittance. c. Accounts are grouped by remittance type, processor, and insurer. 2. Requestor and relevant teams receive status updates. Acceptance Criteria: 1. Invoice status is Unprocessed or Partially Remitted. 2. Paid AR is present and applied. 3. Check payment is cleared (3-day hold). 4. Notifications are triggered on status change. 5. Reports reflect accurate remittance data.	Must have.
MKTID.010		System	Facility to allow Marketing to perform and ensure the following: a. BIR Form 2307 certificates are properly tagged. b. BIR 2307 is selected and the correct withholding percentage is applied during AR/OR creation. c. CWT details are complete and accurate. d. Submit a reinstatement request through the system, including the reason and payment details. e. Confirm whether the payment was already remitted to determine if the reversal should go to Unapplied Payments or the Adjustment Module.	Expected Result: 1. Integrating Marketing Collection BIR 2307 Reversal and Cashiering workflow. 2. Marketing Collection properly tags and tracks certificates in the system. 3. All actions must be logged with user ID, timestamp, and reason for audit purposes.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			f. If the payment was already remitted, Marketing must obtain written confirmation from the Insurer that the excess will be refunded.		
MKTID.011		System	During quotation creation and conversion to policy, the system allows tagging of DP (Direct Payment).	Expected Results: Direct Billed / Direct Payments - Accounts tagged as DP are correctly reflected in the invoice and payment modules. - Payments are processed and matched against the correct invoice. Acceptance Criteria: - DP checkbox is ticked during quotation or policy creation - Invoice reflects direct payment status	Must have.
MKTID.012		System	Facility to automatically perform DP reversal DP PR only after validated DP tagging done by the Marketing team and successful collection of commission receivables to ensure accurate financial records and reduce manual errors in commission and premium reversals.	Expected Results: - The system should only trigger PR reversal when: - A valid DP tag is applied by the Marketing team. - The tagged entry flows into the Commission Receivable module. - The collection is confirmed and the schedule is uploaded. - The reversal should auto-match with the correct commission or premium portion. - Manual intervention and reliance on common files should be eliminated. Acceptance Criteria: - Then the system should validate the tag before it flows into the Commission Receivable module. - If valid DP tag and confirmed collection, the system should auto-reverse. - The system must log all reversal actions with timestamps.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. If the DP tag is missing or invalid, the system should not proceed with reversal and must notify the user. 5. The system must eliminate the need for manual file uploads. Negative Scenario: 1. Incorrect DP Tagging by Marketing.	

PRODUCTION RECON

Production Reconciliation

To establish a system-based facility that ensures the accuracy and completeness of booked production accounts through automated extraction and reconciliation processes.

This includes:

- Timely and complete resolution of discrepancies identified during reconciliation with Insurers.
- Automated extraction of booked accounts on a predefined schedule.
- Enabling users to view and manage extracted data.
- Providing functionality to upload production registers with Insurer feedback and reports of unbooked accounts.
- Allowing users to generate production reconciliation reports.
- Supporting manual extraction of production registers based on specified booking periods.

1. Data Extraction & File Management

- a. Automatically extract booked accounts per Insurer based on defined frequency.
- b. Manually extract production register based on specified booking period.
- c. Lock columns in extracted files except for editable fields (e.g., remarks).
- d. Auto-assign filenames and display file location, date, and time of extract.
- e. Generate a cover letter for each extract.
- f. Export file in agreed format.
- g. Send notification upon extract completion.
- h. Capture and store timestamp when report is sent to Insurer.
- i. Matching insurer reports with system data and managing discrepancies.

2. Production Register, Viewing & Filtering

- a. Accept and automatically upload production reports from Insurers.
- b. View accounts from extracted and uploaded files (Booked and Unbooked).
- c. Filter accounts by:
 - i. Production Month
 - ii. Insurer
 - iii. Account Officer / Broker (AO/AB)
 - iv. Booking Date
 - v. BDOI Location
 - vi. Market Segment
 - vii. Risk Code (Product Type)
- d. Allow User edits:
 - i. Add company concerned
 - ii. Add instructions or notations
- e. Reports with filtering options and visibility across reconciliation lifecycle.

3. Matching & Automation

- a. Match accounts from Booked to Pre-booked stage.
- b. Automatch accounts upon booking or upload.
- c. Automatch based on specific status and time.
- d. Consider accounts with discrepancy ≤ 1.00 as matched.
- e. Match based on key fields:

- i. Policy Number
 - ii. Reference/Invoice Number
 - iii. PN No.
 - iv. Policy Period
 - v. Commission Amount
 - vi. Premiums (Basic/Gross)
 - vii. Assured Name
- f. Tag matched/unmatched status upon upload.
- g. Create buckets per status:
 - i. Matched
 - ii. Matched with discrepancy
 - iii. Unmatched (Pre-booked / No booking)
- h. Block duplicate uploads and track attempts.
- i. Automatic matching of insurer reports and system data.

4. Tracking & Monitoring

- a. View account history and status changes.
- b. Monitor upload status (Successful/Unsuccessful).
- c. Record number of upload attempts and status.
- d. Create repository of unmatched and duplicate accounts.
- e. Audit trail and dashboard integration for tracking.

5. Reports Generation

- a. Production Reconciliation Summary
- b. Summary of Unmatched Accounts:
 - i. Per Market Segment
 - ii. Per AO/AB
 - iii. Per Disposition
- c. Production Register:
 - i. With Insurer's Feedback
 - ii. With Marketing Feedback
 - iii. With Both Feedbacks
- d. List of Unbooked Accounts and Status
- e. Item count and extraction timestamp report
- f. Strategic reports for commission receivables and reconciliation.

PRODUCTION RECON**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
PRCID.001	1	System	Automatically Extract booked accounts per Insurer based on defined frequency. Note: Holidays should be considered. Extraction should be on the next working day.	Expected Result: System extracts booked accounts for each Insurer automatically based on the configured schedule. Acceptance Criteria: 1. Extraction occurs at the defined frequency. 2. Only booked accounts are included. Negative Scenario: Extraction fails due to incorrect frequency configuration. Extract includes unbooked accounts.	Must have.
PRCID.002	1	System	Facility to lock columns the extracted file except for the remarks column for the Insurer.	Expected Result: System should have facility to lock columns the extracted file except for the remarks column for the Insurer. Acceptance Criteria: Users can edit only the 'Remarks' column. Locked columns are not editable. Negative Scenario: 1. System fails to lock columns of the extracted file except for the remarks column for the Insurer. 2. Users can edit locked columns. 3. 'Remarks' column is locked mistakenly.	Must have.
PRCID.003	1	System	Generate a cover letter for each extract. The cover letter is the templated email that will be sent to the Insurer once the file is ready.	Expected Result: System should generate a cover letter for each extract. The cover letter is the templated email that will be sent to the Insurer once the file is ready. Acceptance Criteria: Cover letter includes the necessary information. Negative Scenario: Cover letter is missing or contains incorrect information.	Must have.
PRCID.004	1	System	Auto-assign filename to extract. Standard naming convention: TBD	Expected Result: System generates a filename using a standard naming convention.	Must have.

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: Unique filename is generated. Negative Scenario: 1. System fails to auto-assign filename to extract. 2. Filename is duplicated.	
PRCID.005	1	System	Display file location, date, and time of extract.	Expected Result: System shows metadata of each extract. Acceptance Criteria: Users can view location, date, and time. Negative Scenario: Metadata is missing or incorrect.	Must have.
PRCID.006	1	System	Generate file in agreed format or template.	Expected Result: File is generated in correct format. Acceptance Criteria: Format matches agreed template. Negative Scenario: File format is incorrect.	Must have.
PRCID.007	1	Operations	Facility to add password to the generated file.	Expected Result: 1. The User or system can apply a password to protect the file. 2. The password-protected file is securely stored or transmitted. 3. Only users with the correct password can open or access the file contents. Acceptance Criteria: 1. The password must meet defined and fall within standard complexity rules (e.g., minimum length, character types). 2. After applying the password, the system confirms that the file is protected. Negative Scenario: 1. User enters a password that doesn't meet complexity requirements. 2. File becomes unreadable after password protection due to system error. 3. User tries to open the file with the wrong password.	Must have.

				Location-wise breakdown is accurate. Negative Scenario: Incorrect location mapping or missing data.	
PRCID.037	5	System	Summary Report For Unmatched Accounts Per Marketing AO/AB.	Expected result: Report shows unmatched accounts by AO/AB. Acceptance Criteria: 1. Grouping of account is sorted according to AO/AB for booked and pre-booked accounts only. 2. AO/AB breakdown is correct. Negative Scenario: AO/AB data is misclassified.	Must have.
PRCID.038	5	System	Generate report of unmatched accounts with feedback and disposition	Expected Result: Report includes feedback and disposition. Acceptance Criteria: Report is exportable and accurate. Negative Scenario: Feedback is missing or mismatched.	Must have
PRCID.039	5	System	Summary Report Per Disposition.	Expected Result: Report summarizes accounts by disposition. Acceptance Criteria: Disposition categories are correctly reported. Negative Scenario: Disposition data is missing or incorrect.	Must have.

ADJUSTMENT / CANCELLATION

Adjustment / Cancellation

To have a comprehensive system designed to streamline the processing of endorsement requests, whether internal or external. It enables users to efficiently manage all types of endorsement transactions - financial, non-financial, and internal adjustments - on booked accounts. To have an efficient transaction workflow with appropriate approval mechanisms.

1. Endorsement Transaction Management

- a. Facility to perform single or multiple financial endorsement transactions for booked.
- b. Facility to perform single/multiple non-financial endorsement transaction for booked.
- c. Facility to perform batch posting of cancellation and adjustment.
- d. Facility to return problematic cancellation and adjustment request.
- e. System to generate an endorsement request number with the agreed format.

2. Financial Computation & Accounting Entries

- a. Create accounting entries for booked accounts based on financial endorsements type.
- b. System to set up AP Unapplied Payments (for applied payments) and AR Insurer (for remitted amount) resulting from Cancellation and Adjustment of Invoice.
- c. System to reverse or apply payments made for an account based on the latest premium and route any excess/unapplied payments for Marketing Disposition.
- d. Compute or re-compute premium, commission, refund premium, and sum insured per Insurer based on endorsement type or changes made in the account.
- e. Generate a Validation List showing all posted transactions with corresponding GL entries and adjustment remarks to support financial audits.

3. Documentation & Reporting

- a. Generate an Endorsement Slip for external endorsements to complete documentation.
- b. Generate Adjustment and Endorsement Reports as per:
 - a. Specified date range.
 - b. Report recipient with the identified key information to be included.
- c. Generation of Validation Slip.

4. Search, Traceability & History

- a. Link endorsement transactions with the original account reference number to maintain traceability.
- b. View aging of transactions based on submitted request date and completion date.
- c. Record and view endorsement transactions to ensure transaction history is accessible.
- d. Validate duplicate transaction notifications based on endorsement reference number, reason, invoice number, policy number, assured name and request type to avoid redundancy.
- e. Search facility using the Account Reference Number to pull-up policy details. (e.g. payment history and remittance)

5. Attachment & Supporting Documents

- a. Capability to accept attachment for the supporting documents.

ADJUSTMENT / CANCELLATION**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
ADJID.001	1	System	Facility to perform single or multiple financial endorsement transactions for booked accounts. Type of Endorsements - Financial Endorsement - Non-Financial Endorsement - Internal Adjustments	Expected result: - Users can initiate and complete one or more financial endorsement transactions for both booked accounts. - System is able to process single or bulk financial endorsement transactions for both booked accounts. - For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. - System should not allow adjustment submission when it is on Remittance queue Acceptance Criteria - User can select one or multiple accounts. - System allows financial endorsement types. - Transactions are saved and reflected in the account history. - Confirmation message is displayed upon successful transaction. Negative Scenario: - Attempting to endorse an account that is not booked. - Selecting multiple accounts with incompatible endorsement types. - System fails to save the transaction due to missing mandatory fields. - System allowed adjustment submission even when it is on Remittance queue.	Must have.
ADJID.002	1	Operations	Select the type of Financial Endorsement - Change of Total Sum Insured (Increase or Decrease) - Change in Insured Items, Persons/Members, Units, Locations - Change in Commission Rate (Increase or Decrease)	Expected Result: - User is presented with a list of financial endorsement types and can select the appropriate one for processing. Acceptance Criteria: - All listed endorsement types are available in the dropdown. - Selection triggers the appropriate input fields. - System validates and processes based on selected type.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			d. Change in Premium Rate (Increase or Decrease) or Premium Amount e. Extension of Cover (Period of Cover) f. Change of Cover g. Adjustment in Charges (DST, Premium Tax/VAT, LGT, others) - Increase or Decrease h. Minimal Balance	Negative Scenario: 1. User selects an endorsement type but leaves required fields blank.	
ADJID.003	1	System	Facility to perform single/multiple non-financial endorsement transaction for booked accounts.	Expected result: 1. System enables users to perform non-financial endorsements on selected accounts. 2. Users can process non-financial endorsements for one or more accounts. Acceptance Criteria: 1. User can select one or more accounts. 2. User can choose non-financial endorsement type. 3. System updates account details without affecting financials. 4. Changes are reflected in account details. 5. Transaction history is updated. Negative Scenario: 1. User tries to apply a financial change under a non-financial endorsement. 2. Financial entries mistakenly generated.	Must have.
ADJID.004	1	System	Types Non-Financial Endorsement 1. Descriptive Changes - free text which can be in relation to the assured information, person, risk or item insured, perils, coverage, extensions, warranties, clauses, deductibles, etc. 2. Change of Period Cover - moving the policy inception	Expected Result: 1. System supports all listed non-financial endorsement types with appropriate input fields and validations. 2. system allows Marketing to perform an update to include the non-financial endorsement changes. Acceptance Criteria:	Must have.

(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			to an earlier date or a later date. Note: Term is not changed. 3. Extension of Period Covered - with change in both inception and expiry date (move cover with no financial impact) 4. Extension of Cover - extensions of cover/clauses/warranties/deductibles are added but no premium will be charged. 5. Change of Assured Name (or other Assured information like address, birthdate & occupation. 6. Internal Adjustment for transactions without the need of an endorsement from Insurers.	1. Each type is selectable and triggers or accept flow-in relevant information. 2. System saves changes without affecting financials. 3. Internal adjustments are logged without Insurer involvement. Negative Scenario: 1. User inputs invalid date range for period change.	
ADJID.005	1	System	Facility to return transactions prior to batch posting. This is to check / verify those that are not qualified to be included in the batch posting of cancellation and adjustment.	Expected Result: 1. Users can review transactions before posting. 2. Users can mark transactions for return if they do not meet requirements. 3. Returned transactions are excluded from the batch posting. 4. A reason for return can be optionally recorded. 5. Returned transactions are flagged for further review or correction. Acceptance Criteria: 1. A "Return" option is available during the batch validation step. 2. Users can select one or more transactions to return. 3. Returned transactions are excluded from the final batch posting. 4. The system logs returned transactions with timestamps. 5. A summary report includes returned transactions and reasons. Negative Scenario:	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.006	1	System	Facility to perform batch posting of cancellation and adjustment.	1. Mistakenly returns a compliant transaction. Expected result: 1. Users can post multiple cancellation and adjustment transactions in a single batch. Acceptance Criteria: 1. Batch upload interface is available. 2. System validates each transaction before posting. 3. Summary report is generated post-batch. Negative Scenario: 1. Batch contains invalid or incomplete transactions. 2. System crashes during batch processing. 3. Duplicate transactions posted due to re-upload.	Must have.
ADJID.007	1	System	Facility to return problematic cancellation and adjustment request. (e.g. incomplete, erroneous, or request with discrepancies).	Expected result: 1. System allows users to return or reject problematic cancellation/adjustment requests with remarks and reason for return. Acceptance Criteria: 1. Users can flag and return requests with a reason. 2. A mandatory field for return reason is enforced. 3. Returned requests are logged and visible. 4. Notification is sent to the requester. Negative Scenario: 1. Return fails due to missing reason. System allows return of already processed requests.	Must have.
ADJID.008	1	System	Financial Endorsement conditions under Increase of TSI.	Expected result: 1. System checks if the increased TSI exceeds package limits and prompts for quotation or Insurer addition.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			- If increase would exceed the package TSI limit, system would trigger the User (Marketing AO) to prepare quotation request before allowing submission of endorsement. - With facility to add Insurer for the additional TSI that exceeds the capacity of the current Insurer/s. - For non-package, system should recompute percentage of share. Re-computation of percentage is on the endorsed sum insured. - Premium automatically increases based on the added TSI value and policy period.	2. System recalculates financial values accurately based on endorsement type or account changes. 3. For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. Acceptance Criteria: - System validates TSI against package limits. - If exceeded, User is prompted to prepare a quotation. - Option to add additional Insurer is available. - System recalculates Insurer share and premium based on new TSI and policy period. Negative Scenario: - User increases TSI beyond limit but system fails to prompt for quotation. - Recalculation overwrites original values without backup.	
ADJID.009	1	System	Financial Endorsement conditions under Decrease of TSI. - With facility to apply excess payment to another invoice. - Refund entry of any excess payment / commission linked to unapplied module. - Premium automatically decreases depending on the remaining TSI value and policy period.	Expected Result: - System allows application of excess payment to another invoice or processes refund. Premium is recalculated based on reduced TSI. - For multiple financial endorsements, System should not allow change/increase/decrease of TSI to be processed simultaneously with partial cancellation. Acceptance Criteria: - System recalculates premium based on new TSI. - Excess payment can be applied to another invoice or refunded. - Refund entries are linked to the unapplied module. Negative Scenario: - System fails to detect excess payment after TSI decrease.	Must have.

				2. Recalculation overwrites original values without backup.	
ADJID.010	1	System	Financial Endorsement conditions under Extension of Cover. With additional premium which will be subject for approval.	Expected Result: - System allows extension of cover with additional premium, subject to approval. Acceptance Criteria: - User can input new coverage dates. - System calculates additional premium. - Approval workflow is triggered before finalizing the endorsement. Negative Scenario: - User extends coverage but system does not calculate premium.	Must have.
ADJID.011	2	System	Create accounting entries for booked accounts based on financial endorsements type. Note: Auto computes with default accounting entries is done by Comptrollership.	Expected result: - System generates appropriate accounting entries for each financial endorsement on booked accounts. Acceptance Criteria: - Each financial endorsement triggers corresponding accounting entries. - Accounting entries match the endorsement type. - Entries are posted to the correct GL accounts. - Audit trail is maintained for each entry. Negative Scenario: - Endorsement type not mapped to any accounting rule. - GL account missing or inactive. - Duplicate entries created for a single endorsement.	Must have.
ADJID.012	2	System	System to set-up excess payment resulting from cancellation and adjustment.	Expected result: System identifies and sets up excess payments when cancellations or adjustments result in overpayment. Acceptance Criteria:	Must have.

All endorsement transactions are logged and viewable per account. 3. Old details and new details are available and viewable. Acceptance Criteria: 1. Complete transaction history is accessible. 2. Searchable and includes status and remarks. Negative Scenario: 1. History not updated after transaction. 2. Log entries missing for some transactions.	Must have.
ADJID.023	4	System	Facility to validate and send notification on duplicate transaction notifications based on endorsement reference number, reason, and request type.	Expected result: 1. System checks for duplicate endorsements based on reference number, reason, and type. 2. System checks for duplicate endorsement requests and alerts the user. Acceptance Criteria: 1. Duplicate detection logic is applied. 2. User notified of potential duplicates. 3. Option to proceed or cancel. 4. Option to override with justification. Negative Scenario: 1. System allows duplicate submission without warning.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.024	4	System	Search facility using the Account Reference Number to pull-up policy details. (e.g. payment history and remittance)	Expected result: 1. System retrieves policy details using account reference number. 2. Users can search for policy details using the account reference number. Acceptance Criteria: 1. Accurate search results. 2. Includes payment history and remittance. 3. Fast and responsive search. 4. Partial match and auto-complete supported. Negative Scenario: 1. No results found for valid reference number.	Must have.
ADJID.025	5	System	Capability to accept attachment for the supporting documents. Document being uploaded:	Expected result: 1. System allows users to upload and attach documents to endorsement requests. 2. Users can upload and attach supporting documents to endorsement requests. Acceptance Criteria: 1. Supported file types are accepted. 2. Attachments are linked to the transaction. 3. Upload confirmation is shown. Negative Scenario: 1. Upload fails due to size or format. 2. Attachment not linked to transaction. 3. File corrupted during upload.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
ADJID.026		System	The system shall provide a facility to receive and process a file containing account records with minimal balances ranging from ≥ 10.00 to ≤ 100.00 . Based on system rules, these balances may be written off or credited. The system shall also validate invoice numbers and match them with PR (Payment Receipt) balances to either zero out or credit the accounts accordingly.	Expected Result: 1. The system successfully receives the file containing account balances between 10.00 and 100.00. 2. The system applies either a write-off or credit action based on predefined rules. 3. Invoice numbers are matched with PR balances. 4. If a match is found, the balance is zeroed out or credited 5. A summary report is generated indicating actions taken per account. Acceptance Criteria: 1. The system accepts and parses the input file format (e.g., CSV, Excel). 2. Only accounts with balances between 10.00 and 100.00 are considered. 3. If the balance meets the criteria, the system applies either a write-off or credit based on configuration. 4. The system logs the action taken for each account. 5. The system checks for matching invoice numbers and PR balances. 6. If a match is found, the balance is zeroed out or credited. 7. If no match is found, the account is flagged checking. Negative Scenario 1. The uploaded file is not in the expected format (e.g., missing required columns). 2. Accounts with balances < 10.00 or > 100.00 are included and incorrectly processed.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Invoice numbers are missing or do not match any PR balances, leading to incorrect or failed processing. - The system applies incorrect actions due to misconfigured rules (e.g., credit instead of write-off). - Duplicate account entries cause multiple actions on the same balance.	
ADJID.027		System	Automate the allocation of adjustment amount on the per insurer percentage share. Note: The emphasis on this item should be on the adjustment amount and not on the payment application though it should be done on the Cashiering side under payment application.	Expected Result When a payment is made for a policy with multiple co-insurers, the system should automatically allocate the payment according to the percentage shares assigned to each insurer. This allocation should reflect in both the initial payment application and any subsequent adjustments. Acceptance Criteria: - Upon receiving a payment, the system must: - Automatically split the payment according to the configured percentages. - Record the allocation per insurer in the system. - Ensure only one invoice entry is created, with internal distribution handled by the system. - Any adjustments made to the payment must also follow the original percentage allocation. - The system must maintain a log of adjustments per insurer.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. The system incorrectly allocates the entire 100% to lead insurer, ignoring the configured percentages.	
ADJID.028		System	Facility to perform the following to address the over adjustment: 1. Setting a limit or baseline for allowable adjustments. 2. Tracking cumulative adjustments to ensure they do not exceed the original premium or DTIP. 3. Prompting users when an adjustment exceeds the allowable limit or results in a negative balance. 4. Preventing duplicate adjustments from being processed. Providing a review mechanism for previously applied adjustments.	Expected Result 1. The system should prompt users when an adjustment exceeds the baseline or results in a negative balance. 2. Duplicate adjustments should be flagged and blocked. 3. Users should be able to review previous adjustments before applying new ones. 4. The system should automatically total all adjustments and compare them against the baseline. Negative Scenario: 1. A user submits multiple incremental adjustments without realizing they are duplicating a previous entry. 2. The cumulative adjustment exceeds the original premium, resulting in a negative balance.	

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)

Collection of Commission Receivables (Direct Payments)

To develop and implement an automated system that enhances the efficiency and accuracy of incentive and commission-related processes Retail and Corporate Accounts. This includes automating the calculation and validation of incentives based on production targets, as well as implementing fixed-amount incentive plan program, which incorporates minimum premium requirements and is intended for branch-level distribution. The system will also validate production data to exclude negative amounts and erroneous bookings, automate the processing of commission receivables, and streamline coordination with insurers for data validation. Additionally, it will establish a feedback timeline for insurer responses and generate comprehensive production reports segmented by branch and insurance company, with consolidated yearly data to support strategic decision-making.

1. Production Data Validation and Exclusion Handling

- a. Automatically identifies and excludes invalid production entries (e.g., negative amounts, erroneous bookings).
- b. Flags entries that violate exclusion criteria to prevent incorrect incentive payouts.
- c. Generates alerts for manual review when necessary.

2. Automated Incentive Calculation for Retail and Corporate Accounts.

- a. Automatically computes incentives based on production targets using predefined rates and multipliers.
- b. Supports dynamic incentive structures such as “No Touch” and “Top Up” programs.
- c. Ensures accurate application of rules across defined production periods (e.g., June–December).

3. Motor Mania Incentive Plan Implementation

- a. To adapt fixed incentive amounts based on revised arrangements with the insurer, recognizing that Service Level Agreements (SLAs) are time-bound and may be subject to renegotiation, potentially impacting the incentive structure.
- b. Supports transition from quarterly to annual incentive structures.
- c. Designed for branch-level incentive distribution.

4. Automated Commission Receivables Processing

- a. Consolidates raw files and insurer data to compute commission receivables without manual intervention.
- b. Reduces reliance on manual checks and improves data accuracy and timeliness.

5. Insurer Coordination and Feedback Tracking

- a. Automates sending of validation requests to insurers and tracks their responses.
- b. Monitors feedback timelines and flags delays beyond 10 working days to ensure timely resolution.

6. Comprehensive Production Reporting

- a. Generates detailed production reports by branch and insurance company.
- b. Consolidates yearly data including total production, estimated items, and performance against targets.
- c. Enables data-driven insights for strategic planning and performance evaluation.
- d. Strategic reports for commission receivables and reconciliation.

7. Risk Mitigation and Error Handling

- a. Negative Scenario Addressed:
- b. Misapplied multipliers or missing data leading to incorrect incentives.
- c. Incentives granted to ineligible policies.
- d. Manual intervention due to incomplete automation.
- e. Delayed or missed insurer feedback.
- f. Incomplete or inaccurate reporting due to missing data.

COLLECTION OF COMMISSION RECEIVABLES (Direct Payments)**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As <Persona>, I must be able to					
CMRID.001	1	System	Facility to access the files where Marketing – Collection Head Office and Branches identified Direct Payments (DP) transactions saved their DP list. Each folder is using a predefined file naming convention. Frequency: Integrate with Collection System	Expected Result: 1. All head office and branches submit DP lists consistently and on time, enabling centralized consolidation. 2. The DP tagging of Marketing-Collection flow-in to Commission Receivable module. 3. Handlers are able to generate the consolidated list (HO and Branches) of DP list as basis for billing. Acceptance Criteria: 1. Each head office and branch uploads a DP list on schedule. 2. File names follow the agreed file naming convention (e.g., BranchName_DP_YYYYMMDD). 3. Consolidation includes all submitted lists without duplication. Negative Scenario: 1. A head office or branch fails to submit its list. 2. File naming errors cause missed entries. 3. Duplicate entries across head office or branches are not flagged.	Must have.
CMRID.002	1	System	Capability to match DP entries against production reports and historical commission trackers. Validation checks must confirm full premium remittance, unpaid commission status, and data completeness.	Expected Result 1. DP entries are matched against production reports and historical commission trackers. 2. Validation ensures completeness and accuracy.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 100% of DP entries are checked for: - Fully paid to Insurer. - Commission payment status. - Data completeness and accuracy. - Discrepancies are flagged for review. - System to validate if there are Adjustment from the master record at the invoice level. Negative Scenario: - Premiums are not fully paid but still pass validation. - Commission already paid but listed again. - Missing or incorrect data (e.g., policy number, amount).	
CMRID.003	1	System	Automate validation of production data to detect criteria that should not be included such as negative amounts or erroneous bookings.	Expected Result: - Exclusion criteria for incentive eligibility are defined. - System flags and excludes invalid production entries automatically. - Incentives are not granted to policies that meet exclusion criteria. Acceptance Criteria: - System identifies and excludes those that should not be included and generates alerts for review. - System excludes policies based on predefined exclusion rules. Negative Scenario: - Invalid data not detected, leading to incorrect incentive calculations.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Incentives are incorrectly granted to excluded policies.	
CMRID.004	2		System must generate commission receivable reports that separate DP / Direct Bill and regular commissions, and handle partial remittances and net commission calculations.	Expected Result 1. System generates accurate commission receivable reports. 2. Differentiates DP from other commission types and handles partial remittances. Acceptance Criteria 1. Reports show: a. Direct Payment/Direct Bill vs Regular commissions. b. Net commission after partial remittance. 2. Reports are generated on schedule and are accurate. Negative Scenario: 1. DP commissions misclassified. 2. Partial remittances not calculated correctly. 3. Report generation fails or is delayed.	Must have.
CMRID.005	2	System	Automate calculation and validation of incentives for Retails and Corporate accounts based on production targets. No Touch and Top Up These incentives are based on achieving certain production targets, with corresponding rates and multipliers determining the equivalent percentage.	Expected Result: System calculates and validates incentives automatically based on defined targets and multipliers. Acceptance Criteria: System correctly applies rates and multipliers for production periods (e.g., June-December) and generates accurate incentive values.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Negative Scenario: Incorrect incentive calculation due to misapplied multipliers or missing production data.	
CMRID.006	3	System	Implement Motor Mania incentive plan with fixed amounts per policy and minimum premium requirements. It involves a fixed amount per policy (e.g., 500 pesos or 1000 pesos) with specific minimum basic premium requirements (e.g., 10,000 or 50,000). While initially discussed as quarterly, there's a plan to convert it to a yearly incentive program. It's designed to be passed on only and is intended for branches.	Expected Result: System applies fixed incentive amounts per policy based on premium thresholds. Acceptance Criteria: System validates minimum premium (e.g., 10,000 or 50,000) and applies correct incentive (e.g., 500 or 1000 pesos). 1. Negative Scenario: Incentives applied to policies not meeting minimum premium requirements.	Must have.
CMRID.007	4	System	Automate commission receivable.	Expected Result: System consolidates data and performs automated calculations for commissions. Acceptance Criteria: System processes raw files and insurer data to compute commission receivables without manual intervention. 4. Negative Scenario: Manual checks still required due to incomplete automation or data integration issues.	Must have.
CMRID.008	5	System	Facility to tag as DP account, auto-tagging of valid/invalid, audit trails for rejected accounts, and dropdown reasons for insurer feedback.	Expected Result 1. DP accounts are tagged appropriately in the system. 2. System supports auto-tagging, audit trails, and dropdown feedback reasons.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria 1. System auto-tags accounts e.g. "DP for billing" or "DP for confirmation". 2. Audit trail logs all rejected/returned accounts. 3. Dropdown reasons are available and used consistently. Negative Scenario: 2. System fails to auto-tag accounts. 3. Audit trail is incomplete or missing. 1. Feedback reasons are not selected or incorrectly tagged.	
CMRID.009	5	System	Facility to sort validated accounts by insurer and assigned to handlers for billing. Insurers must respond with either approval or rejection and reason.	Expected Result 1. Validated DPs are billed to insurers and monitored for response. 2. Insurers respond with either approval or rejection and reason. Acceptance Criteria 1. Handlers prepare and send billing within SLA. 2. Files are password protected. 3. Insurer responses are logged and categorized. 4. Facility to upload file from Insurer. 5. Valid accounts proceed to payment; invalid ones are returned with reason. 6. Flow-in to Collection System returned accounts with time stamp and reason. Negative Scenario: 1. Billing sent to wrong Insurer.	Must have.

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- No response from insurer within expected time. - Returned entries lack feedback reason.	
CMRID.010	5		System must track OR numbers and amounts, BIR certificate submissions, withholding tax, and all insurer feedback.	Expected Result: - System tracks all payment proofs, tax documents, and insurer feedback. - Complete audit trail and reporting of all financial and feedback data. Acceptance Criteria - OR numbers and amounts are logged. - BIR certificates and withholding tax submissions are tracked. - All insurer feedback is recorded and reportable. Negative Scenario: - Missing OR documentation. - BIR certificates not submitted. - Feedback from insurers not logged or lost.	Must have.
CMRID.011	5	System	Implement feedback timeline for insurer responses	Expected Result: Insurers provide feedback within 10 working days Acceptance Criteria: System tracks and flags feedback delays beyond 10 working days Negative Scenario: Feedback from insurers is delayed or not received.	Must have.
CMRID.012	6	System	Automate coordination with insurers for validation	Expected Result: System automatically sends validation requests and tracks responses	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: Validation requests are logged and responses are received systematically Negative Scenario: Manual coordination leads to missed or delayed validations	
CMRID.013	7	System	Facility to sanitize data via removing duplicate, invalid, or incomplete account. Only confirmed, fully paid DPs are eligible for billing.	Expected Result 1. Invalid or duplicate accounts are removed. 2. Only confirmed, fully paid DPs proceed to billing. 3. Sanitized and confirmed DP entries are clean and ready for billing. Acceptance Criteria 1. Sanitation as per criteria removes all invalid accounts. 2. Confirmation step verifies payment status before billing. Negative Scenario: 1. Duplicate accounts not removed. 2. Incomplete account mistakenly confirmed. 3. Valid accounts removed due to human error.	Must have.
CMRID.014	7	System	Generate production reports per branch and insurance company with consolidated yearly data.	Expected Result: System generates accurate and comprehensive production reports by branch and insurer. Acceptance Criteria: Reports include total production.	Must have.

Business Requirements Document

OPERATIONS

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: Reports missing data from certain branches or insurers, leading to incomplete analysis.	
CMRID.015		System	Automated tracking and sending of BIR Withholding Tax Certificates. Currently, the submission of BIR withholding tax certificates from insurance companies is done manually, with transmittals acknowledged by Comptrollership through hardcopies. This process is prone to oversight and reconciliation issues. The proposed enhancement involves creating a system module that allows users to tag and submit BIR certificates linked to Official Receipts (ORs), enabling automated tracking and acknowledgment by Comptrollership.	Expected Result: - System allows Users to: - Select ORs issued by the cashier. - Tag corresponding BIR withholding tax certificates. - Submit these digitally to Comptrollership. - The system logs submission dates and acknowledgment status. - Comptrollership can view, acknowledge, and track submissions within the system. - Scanned copies of hardcopy documents can be uploaded and stored for reference. Negative Scenario: - The system prevents submission if no OR is linked. - If an incorrect OR is selected, Comptrollership can reject the submission with a reason. - The user receives a notification of rejection and can resubmit with the correct OR.	Must have.

Usage Requirements

Cashiering (Payments Acceptance and Application)

Volume and Performance – Cashiering (Payments Acceptance and Application)						
Describes how the system needs to operate in terms of capacity and efficiency.						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent			
IT	User access and security management					< 5 seconds
Team Head Team Leader	Receipt issuance and management	HO – 11 Branches – 5	HO – 11 Branches – 5			< 5 seconds
	Create, cancel, and reinstate both Acknowledgement Receipts (AR) and Official Receipts (OR).					< 5 seconds
Team Leader Team Head	Validation and error handling	HO – 5 Branch – 5	HO – 5 Branch – 5			< 5 seconds
Cashiering	Advanced searches using multiple parameters.	HO – 11 Branches – 5	HO – 11 Branches – 5			< 5 seconds
	Generate, extract / download, view and print audit log or history.					< 5 seconds
	Generate and view audit log or history.					< 5 seconds
	Reporting and monitoring					< 5 seconds
	Generate, download, and print various reports.					< 5 seconds
	Generate and view various reports.					< 5 seconds
System	Unapplied payment and GL integration					< 5 seconds
	Tracking and monitoring					< 5 seconds
	Validation and filtering criteria					< 5 seconds
	Validation and error handling					< 5 seconds

Questions	Response
When is the highest system demand expected (e.g., year-end)?	15 th and 30 th of the month
When are peak times for usage (e.g., 12:00 - 14:00 daily)?	08:00am – 05:30pm
Do mobile and desktop end users expect different levels of speed and performance?	No

Availability	
Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	99.9%
When do people use the system (e.g., 9am-6pm daily, 24/7)?	07:00am – 06:30pm
How long can the system be down each month or year without causing issues?	RTO – 4hrs RPO – 24hrs

Business Requirement Document

Operations

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables (Direct Payment)

What times are acceptable for system maintenance?	As per bank standard
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	RTO – 4hrs RPO – 24hrs

Remittance

Volume and Performance - Remittance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent

Cashiering (Payments Acceptance and Application), Remittance, Prod Recon, Adjustment/Cancellation, Collection of Commission Receivables
(Direct Payment)

APPROVAL**Approval**

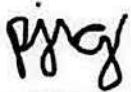

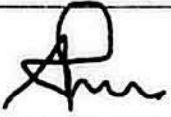

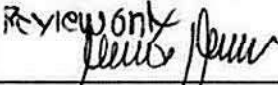

This document has been approved as the official Business Requirements Document for the OPERATIONS request.

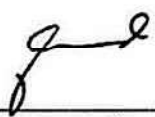

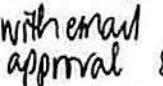

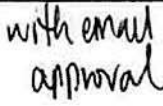

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.
