

FUNCTIONAL REQUIREMENTS SPECIFICATION

Operations

BRD-2 Operations (Cashiering, Remittance, Production Reconciliation, Adjustment / Cancellation, Commission Receivables) and Addendum 1
BIBS – BDOI Broker System

Client	BDO Insurance and Reinsurance Brokers, Inc.
Document	BIBS-FRS-BRD-02
Version	1.0
Date	25 September 2026
Status	Issued for BDOI review
Classification	Confidential

Document Control

Version	Date	Author	Reviewer	Approver	Change
0.9	18 Sep 2026	iorta TechNXT Business Analysis	iorta TechNXT Solution Architect		Internal draft from the BRD-2 baseline and the build design
1.0	25 Sep 2026	iorta TechNXT Business Analysis	iorta TechNXT Project Manager	BDOI Operations Head (pending)	First issue for BDOI review; aligned with the as-built Operations modules and the cross-BRD decisions

Distribution List

Name / Unit	Role	Organisation	Purpose
Head, Operations Services	Approver	BDOI	Review and sign-off
Cashiering Head Office and Branches	Business user	BDOI	Review of the Cashiering FRs
Financial Transactions and Processing (Remittance)	Business user	BDOI	Review of the Remittance FRs
Transaction Recon / Analysis and MIS	Business user	BDOI	Review of the Production Reconciliation FRs
Commission Collection and Adjustments	Business user	BDOI	Review of the Adjustment and Commission Receivables FRs
Retail, Corporate and Commercial Marketing	Business user	BDOI	Review of the Marketing Collection items
Comptrollership	Business user	BDOI	Review of accounting events, BIR certificates and reports
Business Project Services	BRD owner	BDO Unibank ESG	Traceability check against the BRD
Project team	Delivery	iorta TechNXT	Build, test and UAT preparation

1 Introduction

1.1 Purpose

This Functional Requirements Specification (FRS) states how BIBS (BDOI Broker System, on iNXT BrokerVerse) meets the Operations business requirements of BDO Insurance and Reinsurance Brokers, Inc. (BDOI). It turns each BRD requirement into functional requirements with actors, flows, rules, validations, screens, fields, notifications, audit and acceptance criteria.

BDOI uses this document to confirm that the system behaves as the business expects. The project team uses it to test and prepare user acceptance testing (UAT). The Operations modules are built, so this FRS describes the behaviour of the delivered screens and services. Where the built behaviour differs from the BRD text, the FR describes the built behaviour and records the difference in a note with its reference (section 1.6 lists them). Every FR cites the BRD requirement it meets and the BRD page.

1.2 Scope

Operations takes over every invoice booked in New Business (BRD-1) and follows its money until the insurer is paid, the insurer's official receipt is recorded and every difference is closed. The FRS is organised by team.

Table 1: Scope of this FRS

Area	In scope	BRD IDs
Access and invoice ledger	Log-in, role-based access, Operations home, the invoice ledger, Invoice 360, invoice locks, co-insurance shares, batch run reports, report access	BRQID.001-003, 006; RMTID.026, 032, 038, 040; ADJID.027; CSHID.017, 018
Cashiering	AR and OR (create, cancel, reinstate), receipt series, payment files, PDC warehouse, check pick-up, matching and application by component, pre-booked payments, AR Insurance, commission ORs, unapplied dispositions, minimal balances, search, batch printing, BIR 2307, reports	CSHID.001-027
Remittance	Extraction, eligibility rules, batches, exclusion (addendum), approval, schedule and payment request, insurer OR upload, early remittance incentive, special remittance processing, tracking, notifications, reports	RMTID.001-036, 038-040
Adjustment / Cancellation	Financial, non-financial and internal endorsement requests; validation, approval, recompute per insurer (addendum), posting, excess and AR Insurer, slips, minimal balance file, over-adjustment control, reports	ADJID.001-028
Production Reconciliation	Register extraction and sending, insurer feedback upload, matching with tolerance, buckets, feedback and disposition, unbooked accounts, early incentive validation, reports	PRCID.001-039
Commission Receivables / Direct Payment	DP lists, validation and sanitation, billing per insurer, insurer answers and SLA, collection and PR reversal, incentive schemes, BIR certificates, estimated items, reports	CMRID.001-015; RMTID.037
Marketing Collection items	Send schedule, hold requests, special remittance requests, BIR 2307 tagging, DP tagging, endorsement slip, DP PR reversal	MKTID.001-013
Disbursement queue	Payment requests from Operations, DV number and status, BIR 2307 report	DBMID.001; RMTID.034

Area	In scope	BRD IDs
Interfaces and flow-in	Ports to Collection, Disbursement, Marketing, Claims, insurers and shared drive; flow-in feeds with runs, records and alerts	BRQID.004, 005

Out of scope for this phase:

- The Collection system, the Disbursement system and the Accounting (GL mapping) specification. BRD-4 Collections and BRD-5 Accounting, Disbursement and Accounting Controls answer these questions and design the replacements; Operations keeps the seams described in section 7 (OQ01, OQ02, OQ07).
- External transports (SFTP, APIs, shared drive folders) to insurers, BDO bank channels and the Marketing and Claims systems. Files are uploaded and sent by e-mail in this phase (OQ17, OQ22, OQ29).
- The payout of incentives to branches. Operations computes and posts them and hands the pass-on to Disbursement (CMRID.006, OQ39).

1.3 References

Table 2: Reference documents

Ref.	Document	Version / date	Location
R1	Operations BRD: Cashiering, Remittance, Prod Recon, Adjustment / Cancellation, Collection of Commission Receivables (Direct Payment), pages 8-132 of the BRD-2 pack	v1.0, Jul-2025; signed Jul to Sep-2025	docs/source-documents/Operations.pdf
R2	Operations Addendum 1 (RMTID.002, ADJID.014), pages 1-7 of the BRD-2 pack	v1.0, 18-Dec-2025; signed Jan-2026	same file
R3	BDOI Operations (BRD-2) requirements baseline and fit/gap, open questions OQ01-OQ50	current	docs/requirements/BDOI_OPS_BRD_SPEC.md
R4	Operations requirements traceability (status, screens, endpoints, tests per BR ID)	current	docs/requirements/BDOI_OPS_TRACEABILITY.md
R5	Operations build design	current	docs/architecture/OPERATIONS_DESIGN.md
R6	Operations module guide (as built)	current	docs/modules/OPERATIONS.md
R7	Cross-BRD decisions and answered questions	current	docs/requirements/BDOI_CROSS_BRD_DECISIONS.md
R8	FRS BRD-1 New Business and FRS BRD-3 Product Maintenance (booking, catalogue, shared platform)	v1.0	docs/deliverables/out/FRS/

Page references in this document ("p.23") are pages of the BRD-2 PDF (R1, R2). The annex pages 121-132 are scanned; the report and endorsement slip lists of the annex are quoted from those pages.

1.4 Definitions and acronyms

Term	Meaning
AB	Account Broker
AO	Account Officer (Marketing)
AR	Acknowledgement Receipt, issued by Cashiering for premium collected on behalf of an insurer (in Prod Recon documents AR also means Accounts Receivable)

Term	Meaning
AR Insurance	Non-premium payment of an insurer (refund, other expenses) received by Cashiering (CSHID.021)
AR Insurer	Receivable from an insurer for premium already remitted and later reduced by a cancellation or decrease
ARN	Account Reference Number of a New Business account
ATP	BIR Authority to Print of a receipt series
BIR	Bureau of Internal Revenue
BOOK rate	Comptrollership exchange rate, 2 decimals, used by every Operations posting (CSHID.012)
BRD	Business Requirements Document
CLG	Consumer Lending Group
CLPC	Consumer Lending Processing Center
CWT	Creditable withholding tax; the 2% withheld by some clients on premium, evidenced by BIR Form 2307
Disposition	The decision on an unapplied payment (apply, refund, reclass, transfer, others)
DP	Direct Payment; the client pays the premium directly to the insurer and BDOI collects its commission from the insurer
DST	Documentary Stamp Tax
DTIP	Due To Insurer Provider; premium payable to the insurer
DV	Disbursement voucher number assigned by Disbursement
FR	Functional requirement of this document (FR-OP-nnn)
HO	Head Office
Invoice 360	The Operations view of one invoice with its components, movements, locks and the records of every Operations team
LGT	Local Government Tax
LOV	List of values maintained by the System Administrator
OQnn	Open question on BRD-2 (section 10.3)
OR	Official Receipt, a BIR receipt for BDOI income; issued by Head Office only
OTC	Over the counter
PDC	Post-dated check
PN	Promissory Note
PR	Premium receivable from the client, held by component (DST, premium tax / VAT, LGT, FST, other charges, basic premium)
PR2307	The 2% CWT portion of the premium receivable waiting for the client's BIR 2307
Pre-booked	A payment matched to an account that is not booked yet
Production register	The list of accounts BDOI booked with an insurer for a period, sent for reconciliation
UAT	User acceptance testing
Unbooked account	Insurer production that BDOI has not booked
VAT	Value Added Tax
WTAX	Withholding tax

1.5 How to read the functional requirements

Each FR in section 4 has the same parts:

- A header table with the **BRD trace** (requirement ID and page), the **actor**, the **BRD priority**, the **fit** class of the baseline (R3), and the **screens** and **API** that implement it.
- **Description, preconditions, main flow and alternate and exception flows.**
- **Business rules.** *Configurable* rules are maintained by the System Administrator or the business owner in BIBS (parameter, list of values or master record, section 9). *Fixed* rules are part of the system and change only through a change request.
- **Validations and messages:** the check, the message the user sees and its code. The code is the one BIBS returns for a business rule. A "-" marks a screen or platform check (for example a blank mandatory field); its message follows the same wording but has no business code. Text in angle brackets (<invoice>) is replaced by the value.
- **Screens and fields:** label, type, whether mandatory ("Cond." = mandatory when the condition in the Validation column applies), the source list and the validation.
- **Notifications, audit and numbered acceptance criteria.** The acceptance criteria are the basis of the test cases of the BRD-2 test plan.

API paths start with /api/v1. In the header tables "..." stands for the module path given in the section introduction.

Note. Values marked "default" (holding days, tolerances, SLA hours, list entries) are placeholders that BDOI confirms through the open questions in section 10.3. They are configuration, so a changed answer does not need a new build.

Table 3: Fit classes (from the requirements baseline, R3)

Class	Meaning
FIT	Works with the platform built for BRD-1
CONFIGURE	Needs set-up only (parameters, templates, rules)
CHANGE	Extends or re-purposes an existing capability
NEW	A capability that did not exist before BRD-2

1.6 Differences between the built behaviour and the BRD

The table lists where the delivered behaviour differs from the BRD text or fills a gap the BRD leaves open. Each difference is also a note in its FR. None of them removes a BRD requirement; most wait for an answer from BDOI and are configuration.

Table 4: Recorded differences (built behaviour against the BRD)

BRD ID	BRD says	BIBS does	Ref.
BRQID.003	Users customise or filter the Operations sections	Sections are filtered by role; personal pin or hide of sections is not built	FR-OP-003
RMTID.040	Lock while the invoice is "still with Comptrollership"	Remittance and Adjustment locks are built; no Comptrollership lock until BDOI names the activity	OQ28
PRCID.009	Receive and upload the insurer report automatically	The handler uploads the file; mailbox / SFTP pick-up is a parked seam	OQ29

BRD ID	BRD says	BIBS does	Ref.
MKTID.001	Marketing initiates the request to send the schedule	The Remittance processor sends the approved schedule from the batch, once	OQ22
RMTID.002	Main BRD: edit the extracted file online and push it with or without edits	The addendum governs: rows are excluded and restored with a reason; financial fields cannot be edited	Addendum p.4
CSHID.001-005	Cancellation and reinstatement without a stated approver	A cancellation or reinstatement is a request approved by a Cashiering TL / TH (four eyes) before it posts	OQ06
CSHID.007	One OR per remittance batch, or per payment unless consolidated	Remittance approval issues one commission OR per batch; the Collection upload issues one OR per insurer, certificate and payment	OQ49
CSHID.008	Files "encrypted and cannot be edited"; Trade, CLPC and Direct Credit run by IT (FS04)	Operations users upload the files; each file is stored read-only with its SHA-256 and a duplicate file is refused; layouts are configurable	OQ03, OQ04
CSHID.016 / ADJID.026	PR <= 10.00 reversed; file 10.00-100.00 written off (10.00 in both)	The sweep skips an invoice already written off by the file, so a balance is never reversed twice	OQ11
RMTID.005	Trigger extraction at end of day "if payment application is searched"	A user queues the searched invoice for the evening extraction run	OQ18
RMTID.014	Expected result: remit the DTIP balance; acceptance criteria: flag and exclude	Excluded by default (EXCLUDE); CAP remits the DTIP balance only	OQ19
RMTID.016	Compare insurer OR amount with paid PR	Exact comparison per invoice; no tolerance until BDOI gives one	OQ22
RMTID.017	Checks at least 3 banking days old and cleared	Counted in banking days from the last applied value date on the branch calendar; the cleared status comes from the payment application	OQ20
RMTID.019	Eight statuses that mix payment and remittance states	The invoice keeps a payment status and a remittance status; the batch has its own workflow stages	OQ21
MKTID.009	Claims condition validated	The claims condition is confirmed through the Claims feed when it is connected; until then the request carries a note	OQ46
PRCID.002	Only the Remarks column is editable	Remarks and Incentive columns and 200 blank rows are editable, so the insurer can add unbooked production	PRCID.022
PRCID.014 / 021	Filter by BDOI location	The items filter by AO, sales unit, segment and product line; the location filter is on the reports only	R4
PRCID.030	Four statuses	A fifth status BDOI_ONLY marks booked accounts the insurer did not return	R6 5.1
Annex IV #5	Sum Insured on the production register	The column is left out: the invoice ledger does not hold the sum insured	R6 5.7
ADJID.001	Multiple accounts in one transaction	One request per invoice; the wizard and the upload raise several requests at once	R6 4.1
ADJID.003	Marketing updates the account through a non-financial endorsement	Booking records the non-financial endorsement with its description; the account data are not changed	OQ32
ADJID.008	Prompt the AO to prepare a quotation	A hand-off to Marketing; the quotation number is linked on the request by reference	R6 4.1
MKTID.012	Auto-reverse the DP premium receivable	The ledger reversal is always recorded; its GL entry is off (DP_PR_REVERSAL_POSTING) because booking posts no PR for DP invoices	OQ07

BRD ID	BRD says	BIBS does	Ref.
CMRID.005 / 006	No Touch, Top Up and Motor Mania incentives	The scheme engine is built; the schemes stay inactive without tiers until BDOI gives targets and amounts	OQ39
BRQID.004, CSHID.009, MKTID.010 / 013, CMRID.001, DBMID.001, RMTID.034	Integration with Collection and Disbursement	Built as ports with uploads and an in-app Disbursement queue; BRD-4 and BRD-5 now design the replacements	OQ01, OQ02, OQ45

2 Business context and process overview

2.1 Business context

BDOI collects premium from clients on behalf of insurers and remits it net of its commission. It also earns commission, service fees, profit share and incentives. Today Operations issues receipts by hand, extracts remittances manually, matches insurer reports in spreadsheets, computes endorsements manually and gathers commission receivables by e-mail (p.11). The BRD asks for one system that integrates Cashiering, Remittance, Production Reconciliation, Adjustment / Cancellation and the Collection of Commission Receivables, with scheduled extractions, automatic matching, validated accounting entries, tracking and reports (p.10-13).

Table 5: Current and envisioned process (BRD p.11-13)

#	Current process (before)	Envisioned process in BIBS (after)
1	Manual issuance of receipts; payment details not visible; fragmented application	ARs and ORs numbered from controlled series; payments matched at acceptance and applied by component; unapplied money kept in a workbench
2	Manual extraction; no tracking of remittance batches	Scheduled and manual extraction with eligibility checks; batches with approval, Disbursement request and insurer OR
3	Manual matching of booked accounts with insurer reports	Register sent to the insurer; insurer feedback uploaded and matched within a 1.00 tolerance; differences followed to closure
4	Redundant steps, manual computation, limited traceability for endorsements	Endorsement requests recomputed per insurer, approved, posted in batches, linked to the original account
5	Dependency on IT for reports	Reports generated by the users, with view and export rights
6	Manual gathering, sanitation and billing of commission receivables	DP lists validated and billed per insurer; answers tracked against a 10-working-day SLA; commission collected with an OR

2.2 Process overview

Figure 1 shows the life of a booked invoice by team. Steps 1 to 8 follow the money of a paid invoice. Steps 9 to 12 run beside it: reconciliation of what was booked, changes to the invoice, direct payment accounts and minimal balances. Every step reads and writes the invoice ledger (FR-OP-004).

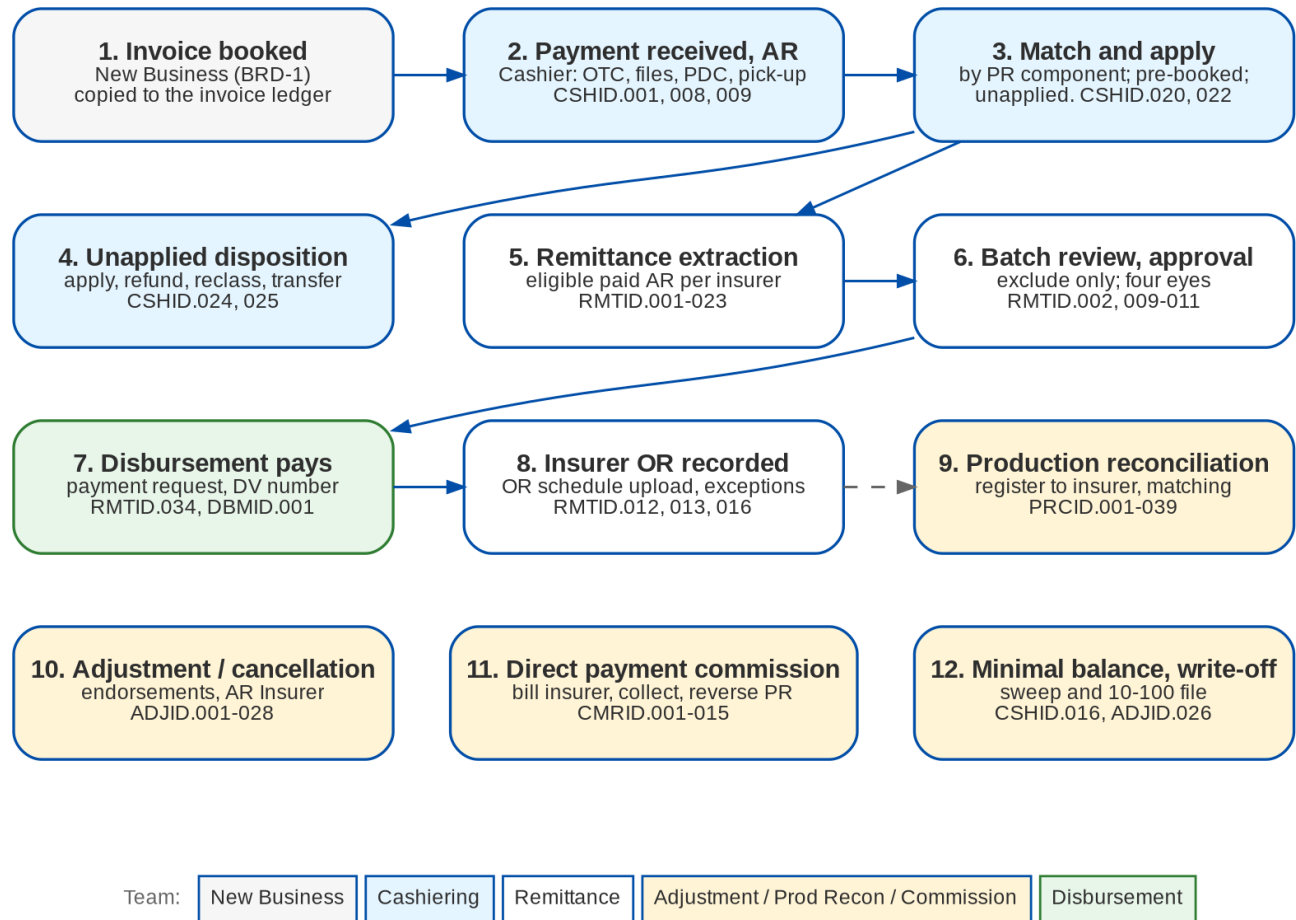

Figure 1: Life of a booked invoice by team (BRD p.11-13)

Table 6: Process steps

#	Step	Owner	What happens in BIBS	BRD
1	Invoice booked	New Business	The booked invoice is copied into the invoice ledger with its components, DTIP, commission and flags	RMTID.038
2	Payment received	Cashier	Payment by counter, bank file, PDC or check pick-up; an AR is issued from the branch series	CSHID.001, 008, 009
3	Match and apply	System	Matched to a booked invoice and applied by component; pre-booked, excess and unmatched money becomes unapplied	CSHID.020, 022
4	Unapplied disposition	Cashier, TL	Apply to another invoice, refund, reclass, transfer; approvals and reversals	CSHID.024, 025
5	Remittance extraction	System, processor	Paid, cleared and eligible premium grouped into batches per insurer and type	RMTID.001-023
6	Batch review and approval	Processor, TL	Exclusions only; submit; four-eyes approval posts the remittance and issues the commission OR	RMTID.002, 009-011
7	Disbursement pays	Disbursement	Payment request, DV number; the invoice becomes fully or partially remitted	RMTID.034; DBMID.001

#	Step	Owner	What happens in BIBS	BRD
8	Insurer OR	Processor	Insurer's OR schedule uploaded; exception report	RMTID.012, 013, 016
9	Production reconciliation	Recon handler	Register to the insurer, feedback matched, differences followed	PRCID.001-039
10	Adjustment / cancellation	Marketing, Adjustment	Endorsement requests; re-application of payments; AR Insurer after remittance	ADJID.001-028
11	Direct payment commission	Commission handler	DP accounts billed to the insurer, collected with an OR, PR reversed	CMRID.001-015; MKTID.012
12	Minimal balances	Cashier, Adjustment	Small balances reversed or written off	CSHID.016; ADJID.026

2.3 Invoice statuses

The invoice ledger keeps two statuses per invoice and a set of flags. Every Operations screen shows them as status chips.

Table 7: *Payment status, remittance status and flags of an invoice*

Item	Values	Set by
Payment status	UNPAID; PARTIALLY_PAID; PAID; NOT_APPLICABLE (direct payment and return invoices)	Derived from the premium receivable balances
Remittance status	UNPROCESSED; UNAPPLIED_PAYMENT; WITH_OUTSTANDING_BALANCE; REVIEW_IN_PROCESS; REQUESTED_FOR_HOLD; APPROVED; PARTIALLY_REMITTED; FULLY_REMITTED; NOT_APPLICABLE	Derived from the movements, and set by Remittance for the batch and hold states (RMTID.019)
Flags	HOLD; PENDING_NEG_ADJ; WRITTEN_OFF; CANCELLED; ESTIMATED	Remittance (hold), Adjustment (pending negative adjustment, cancelled, written off), Cashiering (written off by sweep), Commission (estimated)
Lock	Owner module and reason (for example REMITTANCE while in a batch, ADJUSTMENT while a request is open)	The owner module; released by the owner (RMTID.040)

3 Personas and roles

3.1 Personas

Table 8: Personas and BIBS roles

Persona (BRD annex)	BIBS role	Responsibilities in Operations	BRD
Cashier, HO (11) and branches (5)	CASHIER	Receives payments, issues ARs (branch) and ORs (HO), uploads payment files, requests cancellations and reinstatements, assigns dispositions, prints, validates BIR 2307	CSHID.001-027
Cashiering TL / TH	CASHIER_TL	Approves cancellations, reinstatements and dispositions; maintains receipt series	CSHID.001-006, 024
Remittance Processor (4)	REMIT_PROCESSOR	Extracts, reviews and excludes, submits batches, uploads insurer ORs	RMTID.001-040
Remittance TL / TH	REMIT_TL	Approves batches and special remittances; maintains incentive rules; assigns work	RMTID.009-011; MKTID.009
Production Reconciliation Handler (4)	RECON_HANDLER	Extracts and sends registers, uploads insurer feedback, reconciles	PRCID.001-039
Adjustment Processor (6)	ADJUSTMENT	Validates, returns and posts endorsement requests; uploads batches and minimal balance files	ADJID.001-028
Adjustment TL	ADJUSTMENT_TL	Approves endorsement requests	ADJID.010
Commission Handler / Processor	COMMREC_HANDLER	DP lists, validation, billing, answers, collection; BIR certificate submissions	CMRID.001-015
Commission TL / TH	COMMREC_TL	Posts incentive runs; maintains incentive schemes	CMRID.003, 005, 006
Marketing Collection (HO / branches)	MKT_COLLECTION	Hold and special remittance requests, BIR 2307 tagging, endorsement requests	MKTID.001-013
Marketing TL / UH	MKT_TL	Approves holds; same requests as Marketing Collection	MKTID.006
Comptrollership	COMPTROLLERSHIP	Acknowledges BIR certificates; views journals and reports	CMRID.015
Disbursement	DISBURSEMENT	Works the Disbursement queue: acknowledge, DV number, paid, return, release 2307	DBMID.001
System Administrator	SYSADMIN	Interfaces (flow-in feeds), parameters and lists (section 9)	BRQID.004, 005
Auditor	AUDITOR	Read access to Operations and reports	CSHID.011

The addendum states that user roles and authorisation "will be further defined in succeeding documentations" (p.4, footnote 2). The roles above are the project's proposal until BDOI confirms the matrix (OQ48).

Segregation of duties is enforced by the system, whatever the role grants: a receipt cancellation, reinstatement or disposition is never approved by its requester; a remittance batch is never approved by its submitter; a hold and a special remittance are never approved by their requester; an endorsement request is never approved by whoever raised, submitted or validated it.

3.2 Permissions

Table 9: *Operations permissions*

Permission	Allows
OPS_VIEW	Operations home, invoice search and Invoice 360 (read only)
OPS_REPORT_VIEW / OPS_REPORT_EXPORT	View Operations reports on screen / download and print them (CSHID.017, 018)
CASH_RECEIPT	Receive payments and issue ARs and ORs; Receipts, Check Pick-up
CASH_CANCEL / CASH_REINSTATE	Request the cancellation / reinstatement of a receipt
CASH_APPROVE	Approve cancellations and reinstatements; Cashiering Setup
CASH_APPLY	Pre-booked payments, re-match, manual application
CASH_UPLOAD	Payment files, PDC warehouse, commission ORs
CASH_DISPOSITION / CASH_DISPOSITION_APPROVE	Assign and submit dispositions / approve them and their reversals
CASH_SERIES_MANAGE	Receipt series master
CASH_PRINT	Batch printing of ARs and ORs
CWT_TAG / CWT_PROCESS	Marketing 2307 tagging / Cashiering 2307 validation and report
REMIT_EXTRACT, REMIT_PROCESS, REMIT_EXCLUDE, REMIT_OR_UPLOAD	Extraction, batch processing, exclusion, insurer OR upload
REMIT_APPROVE	Approve remittance batches; incentive rules
HOLD_REQUEST / HOLD_APPROVE	Create, extend, cancel and release holds / approve them
SPECIAL_REMIT_REQUEST / SPECIAL_REMIT_APPROVE	Request / approve special remittances
RECON_PROCESS / RECON_SEND	Reconcile, upload, extract / send registers to insurers
ADJ_REQUEST, ADJ_PROCESS, ADJ_APPROVE, ADJ_POST	Raise, validate, approve and post endorsement requests
COMMREC_PROCESS / COMMREC_APPROVE / INCENTIVE_MANAGE	Direct payment processing / post incentive runs / maintain incentive schemes and runs
BIR_CERT_SUBMIT / BIR_CERT_ACK	Submit BIR certificates / acknowledge or reject them (Comptrollership)
DISB_PROCESS	Disbursement queue
FLOWIN_MANAGE	Interfaces: feed schedules, uploads, replay of the ledger

3.3 Permissions matrix

The table below is the role-to-permission matrix delivered with the build (migration V760; "Y" = granted). Every Operations role also has WORK_VIEW, REPORT_VIEW, ATTACHMENT_VIEW, CLIENT_VIEW and ACCOUNT_VIEW. Handler and team leader roles have BULK_PROCESS and ATTACHMENT_MANAGE; team leaders have WORK_ASSIGN.

Table 10: Role-to-permission matrix for Operations (proposal until OQ48)

Permission	Cash- ier	Cash TL	Remit	Remit TL	Recon	Adj.	Adj. TL	Comm. Rec.	Comm. TL	Mkt Coll.	Mkt TL	Comp- trol.	Disb.	Sys Admin	Audi- tor
OPS_VIEW, OPS_REPORT_VIEW	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
OPS_REPORT_EXPORT	Y	Y	Y	Y	Y	Y	Y	Y	Y						
CASH_RECEIPT, CASH_CANCEL, CASH_REINSTATE, CASH_APPLY, CASH_UPLOAD, CASH_DISPOSITION, CASH_PRINT, CWT_PROCESS	Y	Y													
CASH_APPROVE, CASH_DISPOSITION_APPROVE, CASH_SERIES_MANAGE		Y													
CWT_TAG, HOLD_REQUEST, SPECIAL_REMIT_REQUEST, ADJ_REQUEST										Y	Y				
HOLD_APPROVE											Y				
REMIT_EXTRACT, REMIT_PROCESS, REMIT_EXCLUDE, REMIT_OR_UPLOAD			Y	Y											
REMIT_APPROVE, SPECIAL_REMIT_APPROVE				Y											
RECON_PROCESS, RECON_SEND					Y										
ADJ_PROCESS, ADJ_POST						Y	Y								
ADJ_APPROVE							Y								
COMMREC_PROCESS, BIR_CERT_SUBMIT								Y	Y						
COMMREC_APPROVE, INCENTIVE_MANAGE									Y						
BIR_CERT_ACK, JOURNAL_VIEW												Y			
DISB_PROCESS													Y		
FLOWIN_MANAGE														Y	

4 Functional requirements

4.1 Access, invoice ledger and Invoice 360

The foundation module ops ledger serves every team: access, the Operations home, the invoice ledger and its views, locks, co-insurance shares, batch run reports and report access. API paths of this section are under /api/v1/ops.

FR-OP-001 Log in to BIBS

BRD trace	BRQID.001 (p.16)	Actor	Operations users
Priority	Must have	Fit	FIT
Screens	Login	API	POST /api/v1/auth/login

Description

Operations users log in with their BIBS user ID and password. Operations uses the platform log-in built for BRD-1; it adds no screen of its own.

Preconditions

- The user has an active BIBS account with at least one Operations role (section 3).

Main flow

- The user enters the user ID and password on the Login screen.
- BIBS checks the credentials and the account status.
- BIBS opens the home page with the menu of the user's roles.

Alternate and exception flows

- Wrong credentials. BIBS refuses the log-in and counts the failed attempt.
- Locked account. After the configured number of failed attempts the account locks; the System Administrator unlocks it.
- Idle session. The session ends after the configured idle time; the user logs in again.

Business rules

Rule	Statement	Kind	Maintained in
R1	Log-in, lock-out and session rules follow the session policy of BRD-1 (BRNB.040).	Configurable	Session policy (System Administrator)
R2	BDO single sign-on / Active Directory is not part of this phase (BRD-1 Q42).	Fixed	-

Validations and messages

Check	Message shown	Code
User ID or password wrong	Invalid user ID or password	-
Account locked	Your account is locked. Contact the System Administrator	-

Notifications

- None.

Audit

- Every successful and failed log-in is recorded with user, time and source address.

Acceptance criteria

1. A user with valid credentials and an Operations role logs in and sees the Operations menu sections of the role.
2. A user with wrong credentials is refused and no session is created.
3. The account locks after the configured number of failed attempts.

FR-OP-002 Restrict each action to authorised roles

BRD trace	BRQID.002 (p.16)	Actor	System
Priority	Must have	Fit	FIT
Screens	All Operations screens	API	Every endpoint checks its permission

Description

Every Operations screen, button and API call requires a permission (section 3.2). Menus show only the screens that the user's roles allow; buttons for actions the user may not perform are hidden.

The Cashiering, Remittance and Commission Receivables screens are in the Finance group of the menu; Adjustment and Product Reconciliation are in Client & Policy; the Operations home, invoice search, Invoice 360, Disbursement queue, hand-offs, interfaces and report archive are in the Operations group.

Preconditions

- The user is logged in.

Main flow

1. The user opens a screen or starts an action.
2. BIBS checks the user's permissions for that screen or action.
3. BIBS shows the screen or performs the action.

Alternate and exception flows

- No permission. The screen is not in the menu; a direct link returns "You do not have access to this page". An API call is refused (HTTP 403) and logged.
- Segregation of duties. An approval refused by a four-eyes rule is refused with its message even when the role has the permission (section 3.3).

Business rules

Rule	Statement	Kind	Maintained in
R1	Roles are granted permissions as in section 3.3 until BDOI confirms the matrix (OQ48).	Configurable	Role-permission change request (BRD-11)
R2	Four-eyes rules (a requester never approves) cannot be switched off.	Fixed	-

Validations and messages

Check	Message shown	Code
Action without permission	You are not permitted to perform this action	ACCESS_DENIED

Notifications

- None.

Audit

- Refused API calls are logged with user, endpoint and time.

Acceptance criteria

1. A Remittance Processor sees the Remittance screens and not the Cashiering Setup or the Disbursement queue.
2. A direct call to an approval endpoint by a user without the approval permission is refused and logged.
3. A Marketing Collection user sees Remittance Holds, Special Remittance and BIR 2307 tagging but cannot approve a hold.

FR-OP-003 Present the Operations home by role

BRD trace	BRQID.003 (p.17)	Actor	Operations users
Priority	Must have	Fit	CHANGE
Screens	Operations Home; Cashiering, Remittance, Adjustment, Reconciliation and Commission workbenches	API	GET /api/v1/ops/home

Description

After log-in the Operations Home shows one card per team section the user works in (Cashiering, Remittance, Production Reconciliation, Adjustment, Commission Receivables, Disbursement, Interfaces). Each card shows live work tiles with counts and opens the team's workbench. Sections that the user's roles do not cover are not shown.

The home also has an invoice search box and a list of links to the applications Operations works with, maintained in the list OPS_EXTERNAL_LINK.

Examples of tiles: Unapplied Payments; Cancellations and Reinstatements for Approval; Dispositions for Approval; Batches in Review; Batches for Approval; Awaiting Insurer OR; Holds for Approval; Special Remittances for Approval; Endorsements for Validation, Approval and Posting; Returned to Requester; Registers to Send; Awaiting Insurer Feedback; Cycles Reconciling; Unbooked Insurer Production; DP Accounts to Confirm; Billings Awaiting Insurer; Insurer Feedback Overdue; BIR Certificates to Acknowledge; Payment Requests to Process; Locked Invoices; Pending Negative Adjustments.

Preconditions

- The user has OPS_VIEW.

Main flow

1. The user logs in and opens Operations Home.
2. BIBS collects the counts of each team the user's roles cover and shows one card per team.
3. The user clicks a tile; BIBS opens the team screen filtered on that queue.
4. The user switches between sections through the cards or the menu.

Alternate and exception flows

- No Operations section for the role. The home shows "No Operations section is assigned to your role".

Business rules

Rule	Statement	Kind	Maintained in
R1	A card is shown only for the teams whose permissions the user holds.	Fixed	-
R2	External application links are list values labelled Name https://url.	Configurable	LOV OPS_EXTERNAL_LINK

Notifications

- None.

Audit

- None (read only).

Acceptance criteria

- A Cashier sees the Cashiering card with its tiles immediately after log-in and does not see the Remittance card.
- Clicking "Batches for Approval" opens Remittance Batches filtered on the For Approval stage.
- The home loads within 5 seconds (section 8).

Difference from the BRD. BRQID.003 AC3 asks that users can customise or filter the sections. BIBS filters the sections by role; a personal pin or hide of sections is not built. The request can be raised as a change if BDOI needs it.

FR-OP-004 Keep the invoice ledger of every booked invoice

BRD trace	RMTID.038 (p.68-69), MKTID.011 (p.75)	Actor	System
Priority	Must have	Fit	NEW
Screens	Invoice Search; Invoice 360 (Movements); Interfaces (replay)	API	GET /api/v1/ops/invoices; GET .../invoices/{no}/movements; POST .../invoices/replay

Description

Each invoice booked in New Business, each endorsement invoice and each return invoice is copied into the Operations invoice ledger after the booking commits. The ledger line holds the ARN, invoice, policy, PN numbers, client, assured and payor, lead insurer and insurer shares, currency, booking, inception and expiry dates, risk code, product line, segment, AO and unit, the direct payment and 2% CWT flags, and the amounts per component.

Components: premium receivable (PR) by BASIC, DST, PREMIUM_TAX_VAT, LGT, FST and OTHER; DTIP; COMMISSION; COMMISSION_VAT; WTAX; PR2307. The balance of a component is booked + adjusted - applied + reversed - remitted - written off.

Every Operations movement on the invoice is recorded as a ledger movement (BOOKED, APPLIED, UNAPPLIED, REMITTED, ADJUSTED, WRITE_OFF, DP_REVERSAL, CWT_RECLASS, MIN_BAL) with the module, source reference, AR / OR / batch number, value date and journal batch. The movement list is the payment and remittance history of the invoice.

The direct payment tag set in New Business at quotation or policy (BRNB.114) is copied to the ledger line, so Cashiering, Remittance and Commission Receivables treat the invoice as direct payment (MKTID.011).

Preconditions

- The invoice is booked in New Business.

Main flow

- New Business books an invoice.
- After the booking commits, BIBS copies it into the ledger with its components and BOOKED movements, payment status UNPAID and remittance status WITH_OUTSTANDING_BALANCE.
- Each later Operations action posts its movement and updates the balances and statuses in the same transaction.

Alternate and exception flows

- The copy fails. The booking is kept; the failure is a failed record of flow-in feed OPS_INVOICE_FEED and raises the alert OPS_FLOW_IN_FAILED. An administrator replays the invoice, account or company from Interfaces (job OPS_INVOICE_FEED_REPLAY).
- A direct payment invoice carries its PR and DTIP for information with payment and remittance status NOT_APPLICABLE; booking posts no PR for it.

Business rules

Rule	Statement	Kind	Maintained in
R1	BOOKED movements come only from the booking feed.	Fixed	-
R2	A movement is unique on module, source reference, invoice, component and type; posting the same source twice has no effect.	Fixed	-
R3	Payment status is derived from the PR balances (UNPAID, PARTIALLY_PAID, PAID).	Fixed	-
R4	Keys (ARN, invoice, client, insurer) are stored as values, so the ledger can be replayed from booking at any time.	Fixed	-

Validations and messages

Check	Message shown	Code
Movement without an amount	A movement needs at least one amount other than zero	MOVEMENT_WITHOUT_AMOUNT
BOOKED movement from a module	BOOKED movements come from the booking feed only	MOVEMENT_TYPE_RESERVED
Replay without scope	Give an invoice number, an ARN or a company to replay	REPLAY_SCOPE

Notifications

- OPS_FLOW_IN_FAILED to the System Administrator when a copy fails.

Audit

- Movements and status changes are append-only; each status change keeps the module and time.

Acceptance criteria

1. A booked invoice appears in Invoice Search with its components equal to the booking, status UNPAID and WITH_OUTSTANDING_BALANCE.
2. A payment applied to the invoice shows as an APPLIED movement with the AR number, date and amount per component.
3. A direct payment account booked in New Business shows the DP chip and payment status NOT_APPLICABLE.
4. Replaying an invoice already in the ledger changes nothing.

FR-OP-005 View an invoice in Invoice 360

BRD trace	RMTID.026 (p.63), RMTID.032 (p.66), ADJID.024 (p.100)	Actor	All Operations users (OPS_VIEW)
Priority	Must have	Fit	NEW
Screens	Invoice Search; Invoice 360	API	GET /api/v1/ops/invoices; GET .../invoices/{no}; GET .../invoices/{no}/family; GET .../invoices/{no}/history; GET .../accounts/{arn}/invoices

Description

Invoice Search finds invoices by invoice number, ARN, policy, client or assured, with filters on insurer and booking dates. The search is partial and not case-sensitive and suggests matches while the user types an ARN.

Invoice 360 shows the header with reference chips (ARN, invoice, endorsement) and the status pills: payment status, remittance status, hold, lock, direct payment, written off, pending negative adjustment. Below it: the component table (booked, applied, remitted, adjusted, balance), the movement timeline, the family of the invoice (original, endorsements, return invoices) and one tab per team: Receipts, Remittances, Adjustments, Reconciliation, Commission; then Documents and History.

The hold status and the remittance status of the account are visible with their history and time stamps (RMTID.032).

Preconditions

- The user has OPS_VIEW.

Main flow

1. The user searches by ARN, invoice or policy number.
2. The user opens an invoice from the results.
3. BIBS shows Invoice 360 with the current balances, statuses and the records of every team.

Alternate and exception flows

- Nothing found. The list shows an empty state; the user changes the criteria.

Business rules

Rule	Statement	Kind	Maintained in
R1	Each team tab lists only the records of that team with their count; an empty tab says so.	Fixed	-

Notifications

- None.

Audit

- None (read only).

Acceptance criteria

1. Searching ARN-2026-940001 lists its booking and endorsement invoices; opening one shows its receipts, remittance batch and insurer OR.
2. An invoice on hold shows the hold pill and the hold request in the Remittances tab with its dates.
3. A partial search on the assured name returns the matching invoices regardless of case.

FR-OP-006 Lock invoices while a team works on them

BRD trace	RMTID.040 (p.69-70)	Actor	System; Remittance, Adjustment
Priority	Must have	Fit	NEW
Screens	Invoice 360 (lock pill); Remittance Batch; Adjustment request page	API	Ledger service (internal)

Description

A module locks an invoice while it works on it, with the owner module and a reason. Remittance locks each invoice in a batch until the DV number is received or the line is excluded or returned; Adjustment locks the invoice while a request is open. Other modules may still apply payments to a locked invoice; any other action is refused with INVOICE_LOCKED.

Status chips on every Operations screen show the lock, "In Remittance", "Pending Adjustment" and hold, so the other teams see why an invoice cannot be changed.

Preconditions

- None.

Main flow

1. A team starts work on an invoice (extraction into a batch, an endorsement request).
2. BIBS locks the invoice with the owner and reason and notifies the users working on it (OPS_INVOICE_LOCKED).
3. Another team tries an action on the invoice; BIBS refuses it and names the owner.
4. The owner finishes; BIBS releases the lock.

Alternate and exception flows

- Payment application. Cashiering applies a payment to a locked invoice; the application is allowed.

Business rules

Rule	Statement	Kind	Maintained in
R1	While locked, other modules may post only APPLIED movements.	Fixed	-
R2	Only the owner module releases its lock.	Fixed	-
R3	Lock reasons are free text until BDOI lists them (OQ28).	Configurable	-

Validations and messages

Check	Message shown	Code
Action on a locked invoice	Invoice <invoice> is locked by <owner> (<reason>)	INVOICE_LOCKED

Notifications

- OPS_INVOICE_LOCKED when an invoice a user works on is locked or released.

Audit

- Lock and release are recorded as status changes with owner, reason and time.

Acceptance criteria

1. An endorsement request on an invoice that is in a remittance batch is refused with INVOICE_LOCKED naming REMITTANCE.
2. A payment applied to an invoice locked by Adjustment is accepted.
3. Excluding the invoice from the batch releases the lock.

Difference from the BRD. RMTID.040 also names a lock "while still with Comptrollership". BDOI has not listed which Comptrollership activity holds an invoice (OQ28); no Comptrollership lock is set in this phase.

FR-OP-007 Split invoice amounts by insurer share (co-insurance)

BRD trace	ADJID.027 (p.102-103)	Actor	System
Priority	Must have	Fit	NEW
Screens	Invoice 360 (header, shares); Adjustment request page (Recompute)	API	GET /api/v1/ops/invoices/{no}; GET /api/v1/adjustment/requests/{id}/recompute

Description

A co-insured invoice stays one invoice with its insurer shares (insurer, share percent, lead). Payment is allocated in Cashiering on the invoice; adjustments are split by the configured shares and logged per insurer (FR-OP-054).

Preconditions

- The invoice was booked with insurer shares.

Main flow

1. BIBS copies the shares from the booking to the ledger line.
2. An adjustment of the invoice is recomputed per insurer share and stored per insurer on the request.
3. The posting records the change per insurer.

Business rules

Rule	Statement	Kind	Maintained in
R1	Adjustments follow the original shares of the invoice; they are never allocated 100% to the lead insurer when shares exist.	Fixed	-
R2	The commission party of a direct payment account is the lead insurer.	Fixed	-

Notifications

- None.

Audit

- The change per insurer is kept on the request (adj_request_share).

Acceptance criteria

1. A 60/40 co-insured invoice shows both insurers on Invoice 360.
2. A premium decrease of 1,000.00 on it is split 600.00 / 400.00 on the request's insurer breakdown.

Open point. Whether remittance is extracted and scheduled per insurer share for co-insured invoices is open (OQ50). Remittance batches today are per lead insurer.

FR-OP-008 Continue batch jobs past failed records and report the run

BRD trace	BRQID.006 (p.19-20)	Actor	System; users who upload files
Priority	Must have	Fit	CHANGE
Screens	Bulk Upload wizard (run summary); Payment Uploads; Interfaces (runs, records); Report CSH-BATCH-RUN	API	/api/v1/bulk; /api/v1/ops/flow-in/runs, .../runs/{id}/records

Description

Every upload and scheduled job processes each record in its own transaction. A failed record is stored with its error and the run continues. At the end the run shows counts per outcome and lets the user download the report and reprocess the failed rows.

Payment files report the categories applied, unapplied, pre-booked, excess and failed; other handlers report their own outcomes (for example WRITE_OFF / CREDIT for the minimal balance file).

Preconditions

- The user has the permission of the upload (for example CASH_UPLOAD).

Main flow

1. The user uploads a file, or a job starts.
2. BIBS validates and processes each record; valid records are committed.
3. BIBS shows the run summary with one tile per outcome and the list of failed records with their messages.
4. The user corrects and reprocesses the failed rows.

Alternate and exception flows

- Duplicate file. A file identical to an earlier upload of the same handler is refused (BULK_DUPLICATE_FILE).

Business rules

Rule	Statement	Kind	Maintained in
R1	A failed record never stops the run.	Fixed	-
R2	Outcome categories are defined per handler.	Fixed	-

Validations and messages

Check	Message shown	Code
Same file uploaded again	This file was already uploaded	BULK_DUPLICATE_FILE

Notifications

- OPS_FLOW_IN_FAILED when a feed run has failed records.

Audit

- The run, its counts and every record outcome are kept (bulk job and rows, flow-in runs and records).

Acceptance criteria

- A payment file with 10 rows, one with an unknown invoice, commits 9 rows and reports 1 unapplied or failed row with its reason.
- The run report CSH-BATCH-RUN lists successful, unsuccessful, applied, unapplied and failed records.
- Reprocessing a corrected failed row applies it without reprocessing the others.

FR-OP-009 Generate, view and export Operations reports

BRD trace	CSHID.017 (p.38), CSHID.018 (p.38)	Actor	Operations users
Priority	Must have	Fit	FIT (CSHID.017), CHANGE (CSHID.018)
Screens	Reports (Report Centre); Report Archive	API	/api/v1/reports

Description

Operations reports are in the report category Operations. A user with OPS_REPORT_VIEW generates a report with its parameters and views it on screen with its metadata (name, parameters, date, creator). Downloading (PDF, XLSX, CSV) and printing need OPS_REPORT_EXPORT.

Every run of an archived report is kept in the Report Archive with its parameters, creator, time and file.

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

- The user opens Reports, chooses an Operations report and enters the parameters.
- BIBS generates the report and shows it.
- A user with OPS_REPORT_EXPORT downloads or prints it.

Alternate and exception flows

- View-only user. The download and print buttons are not shown; a direct download is refused.

Business rules

Rule	Statement	Kind	Maintained in
R1	View and export are separate permissions per report.	Configurable	Role grants

Validations and messages

Check	Message shown	Code
Download without export permission	You are not permitted to perform this action	ACCESS_DENIED

Notifications

- None.

Audit

- Each generation and download is recorded in the report archive with user and time.

Acceptance criteria

1. An Auditor views CSH-APPLIED-PREM on screen but cannot download it.
2. A Cashier downloads the same report as Excel.
3. The Report Archive lists the run with its parameters and creator.

4.2 Cashiering

Cashiering receives premium and non-premium payments, issues ARs and Head Office ORs, applies payments to the invoice ledger by component, keeps unapplied payments with their dispositions and runs the BIR 2307 flow. API paths of this section are under /api/v1/cashiering.

FR-OP-010 Maintain AR and OR series per branch

BRD trace	CSHID.006 (p.28-29), CSHID.015 (p.37)	Actor	Cashiering TL / TH (maintain); System (numbering)
Priority	Must have	Fit	CHANGE (CSHID.006), NEW (CSHID.015)
Screens	Receipt Series	API	GET / POST .../series; PUT .../series/{id}; POST .../series/{id}/authorize, /deactivate

Description

A receipt series is kept per kind (AR or OR) and branch, with prefix, first and last number, BIR ATP number and the warning level. ARs are numbered from the series of the branch of the transaction; ORs only from Head Office series. A number is taken when the receipt is posted, under a row lock, so two receipts never get the same number.

Before each receipt BIBS checks that the series has numbers left; a depleted series stops the transaction. When the remaining numbers reach the warning level, BIBS raises the alert RECEIPT_SERIES_LOW. The Receipt Series screen shows a remaining-count gauge.

Preconditions

- The user has CASH_SERIES_MANAGE.

Main flow

1. The TL adds a series with kind, branch, prefix, range, ATP number and warning level.
2. Another user with CASH_SERIES_MANAGE authorises it; it becomes usable.
3. Each AR or OR takes the next number of the usable series.

Alternate and exception flows

- The TL extends the last number of a series; it cannot go below the numbers already issued.
- The TL deactivates a series; the next usable series of the branch is used.

Business rules

Rule	Statement	Kind	Maintained in
R1	OR series belong to Head Office only.	Fixed	-
R2	Series are maker-checker.	Fixed	-
R3	Series format and ATP ranges follow BDOI's BIR registration (OQ05).	Configurable	Receipt Series

Validations and messages

Check	Message shown	Code
OR series for a branch other than HO	Official receipt series belong to Head Office only (CSHID.006)	OR_HEAD_OFFICE_ONLY
Last number below first	The last number must not be below the first number	RECEIPT_SERIES_RANGE
Last number below issued numbers	The last number cannot be below the numbers already issued	RECEIPT_SERIES_RANGE
No series left	No authorized <kind> series with numbers left for this branch (CSHID.015)	RECEIPT_SERIES_DEPLETED
Maker authorises own series	The requester cannot approve	MAKER_CHECKER_VIOLATION

Screens and fields: Receipt Series

Field	Type	Mand.	Source / LOV	Validation
Kind	List	Yes	AR / OR	OR only for Head Office
Branch	List	Yes	Branches	Branch of the company
Prefix	Text	Yes	-	For example AR-HO-, AR-CEB-, OR-HO-
From No. / To No.	Number	Yes	-	To >= From
BIR ATP No.	Text	No	-	-
Warn When Remaining At	Number	No	-	>= 0

Notifications

- RECEIPT_SERIES_LOW alert to the Cashiering TL when a series reaches its warning level.

Audit

- Series changes and authorisations are audited with before and after values.

Acceptance criteria

- A branch AR takes the next number of the branch series; an OR takes the next Head Office OR number.
- An OR from a branch series is refused with OR_HEAD_OFFICE_ONLY.
- When the last number is used, the next receipt is refused with RECEIPT_SERIES_DEPLETED.
- No two receipts carry the same number.

FR-OP-011 Receive a payment and issue an Acknowledgement Receipt

BRD trace	CSHID.001 (p.23-24)	Actor	Cashier
Priority	Must have	Fit	CHANGE
Screens	Receive Payment; Receipts; Receipt page	API	POST .../payments/preview; POST .../payments; POST .../receipts/ar; GET .../receipts/{id}/pdf

Description

The cashier records a premium payment (Bills Payment, OTC, Trade, CLPC, PDC, Direct Credit) or a non-premium payment (refund, other expenses, AR Insurance). BIBS issues an AR numbered from the branch series, in the currency received, converted at the BOOK rate.

The Receive Payment screen has two panes: on the left the payor and the ARN, invoice, policy or PN look-up and the tender; on the right a live preview of the match and of the application by component (DST, VAT, LGT, FST, other, basic), the 98% badge for 2% CWT clients, the excess that will stay unapplied and the BOOK rate.

Each payment is matched and applied at once (FR-OP-018, FR-OP-019). Uploaded files, matured PDCs and check pick-ups issue their ARs the same way (FR-OP-015 to FR-OP-017).

Preconditions

- The user has CASH_RECEIPT; the branch has a usable AR series.

Main flow

- The cashier opens Receive Payment and enters the payor, reference, amount, currency, mode and check details.
- BIBS shows the preview of what the payment will match and apply.
- The cashier saves. BIBS issues the AR, posts OPS_AR_RECEIPT, applies the payment and shows the receipt page.
- The cashier prints the AR.

Alternate and exception flows

- Non-premium payment of an insurer (AR class AR_INSURANCE). See FR-OP-020.
- No match. The AR is issued and the money becomes an unapplied item (FR-OP-022).

Business rules

Rule	Statement	Kind	Maintained in
R1	AR classes and channels are the list AR_CLASS (premium: Bills Payment, OTC, Trade, CLPC, PDC, Direct Credit; non-premium: Refund, Other expenses, AR Insurance).	Configurable	LOV AR_CLASS

Notifications

- None.

Audit

- Receipt creation is audited with the AR number, user and time (CSHID.011).

Acceptance criteria

1. An OTC payment on a booked invoice issues an AR with the next branch number and applies the payment; the invoice becomes PAID when fully covered.
2. A USD payment shows the BOOK rate and posts at that rate.
3. The AR prints with the number, payor, amount and invoice.

FR-OP-012 Issue an Official Receipt for BDOI income

BRD trace	CSHID.002 (p.24-25)	Actor	Cashier (Head Office)
Priority	Must have	Fit	CHANGE
Screens	Receipts (Issue Official Receipt); Receipt page	API	POST ../receipts/or

Description

Head Office issues ORs for Service Fee Income (risk management fee, consultancy fee), Insurance Profit Share, Commissions (with VAT and withholding tax), Incentives and Others (discount). An OR has lines with gross amount, VAT and withholding tax, and the 2307 certificate reference when tax is withheld. Posting OPS_OR_ISSUE credits the income account of the OR type and output VAT.

Commission ORs for remittance batches and direct payment collections are issued by the system (FR-OP-021, FR-OP-035, FR-OP-094).

Preconditions

- The user has CASH_RECEIPT at Head Office; a Head Office OR series is usable.

Main flow

- The cashier clicks **Issue Official Receipt** and chooses the OR type.
- The cashier enters the payor, currency, mode, amounts and description.
- BIBS checks the Head Office rule and the series, issues the OR and posts it.

Alternate and exception flows

- Issued from a branch. BIBS refuses the OR.

Business rules

Rule	Statement	Kind	Maintained in

Description	Text	No	-	-

Notifications

- None.

Audit

- OR issuance is audited with OR number, user and time.

Acceptance criteria

- A service fee OR of 11,200.00 with 1,200.00 VAT posts the service fee income and output VAT.
- A branch cashier cannot issue an OR.

FR-OP-013 Cancel an AR or OR

BRD trace	CSHID.001 (p.23-24), CSHID.002 (p.24-25), CSHID.003 (p.25-26), CSHID.012 (p.35)	Actor	Cashier (request); Cashiering TL / TH (approve)
Priority	Must have	Fit	CHANGE
Screens	Receipt page (Cancel); Receipts (Cancellations and Reinstatements tab)	API	POST .../receipts/{id}/cancel; GET .../receipt-actions; POST .../receipt-actions/{id}/approve, /resubmit

Description

The cashier requests the cancellation of an AR or OR with a reason from the list RECEIPT_CANCEL_REASON. The request gets its own transaction number CAN-yyyy-n and goes to a Cashiering TL / TH for approval (workflow OPS_RECEIPT_ACTION, section 5).

On approval BIBS reverses every active application of the receipt (the invoices return to outstanding), re-posts the receipt events with negative amounts at the original BOOK rate, closes the unapplied balance of the receipt and marks it CANCELLED.

Preconditions

- The user has CASH_CANCEL; the receipt is ISSUED or REINSTATED and has no request waiting.

Main flow

- The cashier opens the receipt and clicks **Cancel**.
- The cashier chooses the reason group and reason and writes remarks ("Others" needs the text).
- The cashier submits; the request moves to For approval and the TLs are notified.
- The TL clicks **Approve and Post**. BIBS posts the reversal and cancels the receipt.

Alternate and exception flows

- The TL returns the request with a reason; the cashier corrects and resubmits or withdraws it.
- An unapplied item of the receipt already has a disposition in process. The cancellation is refused until the disposition is withdrawn.

Business rules

Rule	Statement	Kind	Maintained in
R1	Reason groups PREMIUM, COMMISSION, PDC and GENERAL with the BRD values (section 9.2).	Configurable	LOV RECEIPT_CANCEL_REASON

Request not for approval	<transaction> is <stage>	RECEIPT_ACTION_NOT_FOR_APPROVAL

Screens and fields: Cancel receipt

Field	Type	Mand.	Source / LOV	Validation
Reason Group	List	Yes	PREMIUM, COMMISSION, PDC, GENERAL	-
Reason	List	Yes	LOV RECEIPT_CANCEL_REASON of the group	Active value
Remarks	Text	Cond.	-	Required for Others

Notifications

- CASH_APPROVAL_REQUEST to the approvers on submission; the requester on return or posting.

Audit

- Request, approval and posting are recorded with the transaction number, AR / OR number, user and time.

Acceptance criteria

- A cancelled AR puts the invoice it paid back to outstanding and reverses the AR posting.
- The cashier who requested the cancellation cannot approve it.
- A cancellation without a reason is refused.

Difference from the BRD. The BRD does not state who approves cancellations and reinstatements (OQ06). BIBS requires the approval of a Cashiering TL / TH before posting, so no receipt is reversed by one person.

FR-OP-014 Reinstate a cancelled receipt

BRD trace	CSHID.001 (p.23-24), CSHID.004 (p.26-27), CSHID.005 (p.27-28), CSHID.013 (p.35-36)	Actor	Cashier (request); Cashiering TL / TH (approve)
Priority	Must have (CSHID.013: not stated in the BRD)	Fit	NEW
Screens	Receipt page (Reinstate)	API	POST .../receipts/{id}/reinstate; POST .../receipt-actions/{id}/approve

Description

A cancelled receipt is reinstated in full or in part as a separate transaction RIN-yyyy-n, with a reason from REINSTATEMENT_REASON and the encoded fields of the reason group. On approval BIBS restores the receipt (status REINSTATED), posts OPS_RECEIPT_REINSTATE for the reinstated amount, applies it to the encoded invoice and keeps the rest unapplied.

Premium reinstatement fields: invoice number, AR number, assured / payor, amount reinstated, Account Officer, Unit Head, Team Leader. Direct payment reinstatement fields: invoice number, OR number, assured / payor, amount reinstated. The fields default from the original receipt.

When the receipt was cancelled as a bounced or returned check, the encoded fields are not required (BRD note).

Preconditions

- The user has CASH_REINSTATE; the receipt is CANCELLED.

Main flow

- The cashier opens the cancelled receipt and clicks **Reinstate**.
- The cashier chooses full or partial, the reason group and reason, and completes the fields.
- The request goes to the TL, who approves; BIBS posts and re-applies.

Alternate and exception flows

- Direct payment reinstatement of a reversed DP account is done in Commission Receivables (FR-OP-094).

Business rules

Rule	Statement	Kind	Maintained in
R1	Reason groups PREMIUM and DIRECT_PAYMENT with the BRD values (section 9.2).	Configurable	LOV REINSTATEMENT_REASON
R2	Premium reasons apply to ARs.	Fixed	-

Account Officer / Unit Head / Team Leader	Look-up	Cond.	Sales organisation	Premium group
Remarks	Text	Cond.	-	Required for Others

Notifications

- CASH_APPROVAL_REQUEST to the approvers.

Audit

- The reinstatement transaction number, reason, fields and posting are recorded.

Acceptance criteria

1. A partial reinstatement of 5,000.00 of a 10,000.00 AR applies 5,000.00 to the encoded invoice and posts OPS_RECEIPT_REINSTATE.
2. A reinstatement without the Unit Head of a premium reason is refused and names the missing field.
3. A bounced-check receipt is reinstated without the encoded fields.

FR-OP-015 Upload payment files for batch processing

BRD trace	CSHID.008 (p.29-32)	Actor	Cashier
Priority	Must have	Fit	CHANGE
Screens	Payment Uploads (Bulk Upload wizard, run summary); Cashiering Setup (layouts)	API	/api/v1/bulk (handlers PAY_BILLS, PAY_TRADE, PAY_CLPC, PAY_DIRECT_CREDIT, PAY_PDC); GET / PUT .../layouts/{code}

Description

The cashier uploads the payment files of the channels: Bills Payment (TXT FS01 from IT-DCO), Trade (TXT from CIB), CLPC (Excel), Direct Credit (TXT FS01/04) and the PDC list (Excel). Each row becomes a payment with its AR, is matched and applied (FR-OP-018), and the run summary shows applied, unapplied, pre-booked, excess and failed rows (FR-OP-008).

Each uploaded file is stored read-only with its SHA-256; the same file cannot be uploaded twice. Unmatched payments go to the unapplied premium bucket.

The layout of each handler is kept in Cashiering Setup (AUTO for Excel / CSV / detected TXT, DELIMITED with a separator, or FIXED_WIDTH as Header:start:length). Until BDOI gives the bank layouts, the delimited layouts use the BRD field names (section 9.2).

Preconditions

- The user has CASH_UPLOAD.

Main flow

1. The cashier opens Payment Uploads and chooses the file type.
2. The cashier uploads the file; BIBS validates the layout and each row.
3. BIBS issues the ARs, matches and applies each payment and shows the run summary.
4. The cashier downloads the run report and reprocesses failed rows.

Alternate and exception flows

- Automatic matching again. The job PAYMENT_AUTOMATCH (hourly) re-matches unapplied payments of the files (FR-OP-018).

Business rules

Rule	Statement	Kind	Maintained in
R1	Files are stored read-only with their SHA-256; a duplicate file is refused.	Fixed	-
R2	Layouts per handler are maintained in Cashiering Setup (OQ03, OQ04).	Configurable	Cashiering Setup
R3	An AR is issued for every uploaded payment.	Fixed	-

Validations and messages

Check	Message shown	Code
Duplicate file	This file was already uploaded	BULK_DUPLICATE_FILE
Delimited layout without a one-character separator	A delimited layout needs a one-character separator	PAYMENT_LAYOUT_DELIMITER
Fixed-width field written wrongly	Write each field as Header:start:length, not '<part>'	PAYMENT_LAYOUT_FIELDS
Unknown layout kind	Unknown layout kind <kind>	PAYMENT_LAYOUT_KIND

Screens and fields: Cashiering Setup (payment file layout)

Field	Type	Mand.	Source / LOV	Validation
File Kind	List	Yes	AUTO / DELIMITED / FIXED_WIDTH	-
Separator	Text	Cond.	-	One character; for DELIMITED
Fields	Text	Cond.	-	Header:start:length separated by ; (start is 1-based); for FIXED_WIDTH

Notifications

- None; the run summary is shown to the uploader.

Audit

- Each file (name, hash, uploader, time) and each row outcome are kept.

Acceptance criteria

1. A Bills Payment file of 20 rows issues 20 ARs; rows with a booked invoice are applied and the others are unapplied.
2. Uploading the same file again is refused.
3. A change of the PAY_BILLS layout to FIXED_WIDTH is used by the next upload without a release.

Difference from the BRD. CSHID.008 states that Trade, Direct Credit and CLPC files are prepared by the business units and run by IT as a batch (FS04), and that the files are "encrypted and cannot be edited". In BIBS the Cashiers upload the files, and integrity is kept by read-only storage with a hash and the duplicate block (OQ03, OQ04).

FR-OP-016 Warehouse post-dated checks

BRD trace	CSHID.008 (p.29-32)	Actor	Cashier; System (maturity job)
Priority	Must have	Fit	CHANGE
Screens	PDC Warehouse	API	GET / POST .../pdc; POST .../pdc/{id}/release; POST .../pdc/mature; bulk PAY_PDC

Description

Post-dated checks are warehoused by screen or by the PDC list upload, each with a system number PDCW-yyyy-n, the client, invoice or ARN, check number, bank and branch, maturity date, amount and market segment. The job PDC_MATURITY (daily 08:30 PHT) turns each matured check into a payment with its AR, matched and applied like any payment.

Before maturity a check leaves the warehouse as returned, replaced or pulled out, with a reason. The warehouse is viewed by maturity month.

Preconditions

- The user has CASH_UPLOAD.

Main flow

- The cashier adds a check or uploads the daily PDC list.
- BIBS stores the check as WAREHOUSED with its PDCW number.
- On the maturity date the job creates the payment, issues the AR and applies it; the check becomes APPLIED.

Alternate and exception flows

- The cashier releases a check before maturity as returned, replaced or pulled out.
- The cashier matures checks on demand (**Mature Now**).

Business rules

Rule	Statement	Kind	Maintained in
R1	A check (bank and number) is warehoused once.	Fixed	-
R2	Maturity runs daily (job PDC_MATURITY).	Configurable	Job schedule

Validations and messages

Check	Message shown	Code
Check already warehoused	Check <bank> <no> is already warehoused	PDC_DUPLICATE
Amount zero	A post-dated check needs an amount above zero	PDC_AMOUNT
Release with another outcome	A check leaves the warehouse as returned, replaced or pulled out	PDC_RELEASE_STATUS

Check	Message shown	Code
Check not in the warehouse	Check <PDCW no> is <status>, not in the warehouse	PDC_NOT_WAREHOUSED

Screens and fields: Add post-dated check

Field	Type	Mand.	Source / LOV	Validation
ARN, Invoice, Policy or PN No.	Text	Yes	-	-
Client Code / Payor Name	Look-up / Text	Yes	Client master	-
Check No. / Bank / Bank Branch	Text / List	Yes	Banks	-
Maturity Date	Date	Yes	-	-
Amount	Amount	Yes	-	> 0
Market Segment	List	No	Segments	-

Notifications

- None.

Audit

- Warehousing, release and maturity are recorded with the PDCW number, user and time.

Acceptance criteria

1. A PDC with maturity today is applied by the job, with its AR, and shows APPLIED.
2. A check warehoused twice is refused.
3. The PDC Warehousing report lists the warehoused checks with AR date, AR number, maturity, client, amount, bank, branch, check number and segment.

FR-OP-017 Queue checks for pick-up and print their ARs

BRD trace	CSHID.009 (p.32-33)	Actor	Cashier; Collection (source)
Priority	Must have	Fit	NEW
Screens	Check Pick-up	API	GET / POST .../pickups; POST .../pickups/import, /pickups/print; POST .../pickups/{id}/cancel; feed COLLECTION_CHECK_PICKUP

Description

Checks tagged "for check pick-up" by Collection are queued in Cashiering. They arrive through the flow-in feed COLLECTION_CHECK_PICKUP (upload now) or are entered by hand. The cashier filters the queue by pick-up date; only requests due for printing are shown. **Print ARs** issues and prints the ARs of the selected checks in one batch, each with its own AR number.

Preconditions

- The user has CASH_RECEIPT.

Main flow

1. Pick-up requests reach the queue from the feed or by entry.

- The cashier filters by pick-up date and selects the checks.
- The cashier clicks **Print ARs**. BIBS issues the ARs in one transaction and prints them.

Alternate and exception flows

- The cashier cancels a request that will not be picked up.

Business rules

Rule	Statement	Kind	Maintained in
R1	A collection reference is queued once.	Fixed	-
R2	Only requests due on the selected dates are printed.	Fixed	-

Validations and messages

Check	Message shown	Code
Reference already queued	Collection reference <ref> is already queued	PICKUP_DUPLICATE
Amount zero	The check amount must be above zero	PICKUP_AMOUNT
None of the selection due	None of the selected requests is due for printing	PICKUP_NOTHING_DUE
Request not queued	Pick-up request <ref> is <status>	PICKUP_NOT_QUEUED
Feed record incomplete	Pick-up record <key> is incomplete: <detail>	PICKUP_RECORD_INVALID

Screens and fields: Check Pick-up (filter)

Field	Type	Mand.	Source / LOV	Validation
Pick-up From / Pick-up To	Date	No	-	From <= To

Notifications

- None.

Audit

- Each request and its AR number are logged; the report CSH-CHECK-PICKUP lists them.

Acceptance criteria

- Two requests due today print two ARs with consecutive numbers.
- A request due next week is not printed today.

Superseded source. The source of pick-up requests is the Collection system (OQ01, OQ13). BRD-4 Collections turns it into an in-app Collections disposition; the Cashiering queue and **Print ARs** stay as built.

FR-OP-018 Match payments at acceptance and handle pre-booked payments

BRD trace	CSHID.020 (p.40-41)	Actor	System; Cashier (pre-booked queue)
Priority	Must have	Fit	CHANGE
Screens	Receive Payment (preview); Pre-booked Payments; Payment Uploads (run summary)	API	POST .../payments/preview; POST .../payments; GET .../prebooked; POST .../prebooked/{id}/rematch, /release; POST .../matching/run

Description

Every payment except a warehoused PDC is matched at acceptance on the ARN, invoice, policy or PN number. The outcome is one category: APPLIED (booked invoice with outstanding PR; applied up to 100%, or 98% for 2% CWT clients); PREBOOKED (account found but not booked yet); UNAPPLIED_NO_MATCH (no account found); EXCESS (payment above the outstanding amount; the excess stays unapplied); CANCELLED_REFERENCE (invoice or slip cancelled).

A pre-booked payment issues its AR and waits as an unapplied item of origin PREBOOKED. It is applied when the invoice is booked (ledger event) or by the job PREBOOKED_REMATCH (every 2 hours); processed items leave the pre-booked queue. Items that wait too long raise PREBOOKED_AGEING.

A pre-booked payment also opens the New Business payment gate of the account (evidence CASHIERING PRE:<id>), so placement does not wait for booking (FR-OP-132).

Preconditions

- None (automatic).

Main flow

1. A payment is received (counter, file, PDC, pick-up).
2. BIBS looks up the references and decides the category.
3. BIBS applies, queues as pre-booked, or creates the unapplied item.

Alternate and exception flows

- The cashier runs **Re-match Now** on a pre-booked item, or **Release** to move it to the Unapplied Payments workbench.
- The job PAYMENT_AUTOMATCH (hourly) matches again unapplied NO_MATCH and PREBOOKED items with their references.

Business rules

Rule	Statement	Kind	Maintained in
R1	Application of 2% CWT clients is limited to 98% of the premium; the 2% waits for the BIR 2307.	Configurable	Parameter CWT_APPLICATION_PERCENT (98)
R2	Several outstanding invoices of one reference are paid oldest first.	Fixed	-
R3	Pre-booked ageing threshold 5 days (default).	Configurable	Alert PREBOOKED_AGEING
R4	The match key of pre-booked payments is ARN, invoice, policy or PN until BDOI confirms it (OQ12).	Configurable	-

Validations and messages

Check	Message shown	Code
Pre-booked item already processed	Pre-booked payment of <ARN> is <status>	PREBOOKED_NOT_OPEN

Notifications

- PREBOOKED_AGEING alert to the Cashiers when an item passes the threshold.

Audit

- The category, matched invoice and application are recorded on the payment.

Acceptance criteria

1. A payment of 10,000.00 on a booked invoice of 10,000.00 is APPLIED in full.
2. For a 2% CWT client the same payment applies 9,800.00 and leaves 200.00 unapplied.
3. A payment by ARN before booking is PREBOOKED and is applied automatically when the invoice is booked.
4. A payment quoting a cancelled invoice becomes unapplied with origin CANCELLED_REFERENCE.

FR-OP-019 Apply payments by premium component hierarchy

BRD trace	CSHID.022 (p.42)	Actor	System
Priority	Must have	Fit	NEW
Screens	Receive Payment (preview); Receipt page (Applications, Journal)	API	POST ../payments/preview; POST ../payments

Description

BIBS applies each payment to the premium receivable of the invoice component by component in the order: DST, premium tax / VAT, LGT, FST, other charges, basic premium. It never applies to DTIP. Each application posts OPS_PAYMENT_APPLY (Dr unapplied collections / Cr PR by component) and, when commission is realised on collection, the realised commission and VAT; it records an APPLIED movement APP:<id> on the ledger.

Preconditions

- The payment matched a booked invoice with outstanding PR.

Main flow

1. BIBS takes the outstanding balance of each component in hierarchy order.
2. BIBS applies the payment until it is used or the PR is cleared.
3. BIBS posts the application and updates the invoice balances and payment status.

Alternate and exception flows

- The payment exceeds the PR. The excess becomes an unapplied item of origin EXCESS.

Business rules

Rule	Statement	Kind	Maintained in
R1	Hierarchy DST > premium tax / VAT > LGT > FST > other > basic.	Fixed	-
R2	Commission is realised pro rata on collection when OPS_COMMISSION_REALIZATION = ON_COLLECTION.	Configurable	Parameter OPS_COMMISSION_REALIZATION

Validations and messages

Check	Message shown	Code
Application reversed twice	Application <id> is already reversed	APPLICATION_ALREADY_REVERSED

Notifications

- None.

Audit

- Each application (component, amount, sequence) is kept with its receipt and journal.

Acceptance criteria

- A partial payment of 1,500.00 on an invoice with DST 1,000.00, VAT 1,200.00 and basic 10,000.00 applies 1,000.00 to DST and 500.00 to VAT.
- The receipt's Journal tab shows the OPS_PAYMENT_APPLY entry balanced.

Open point. The BRD also names a mode-of-payment hierarchy "Check, Cash". Its meaning is not defined (OQ09); BIBS applies each payment separately in the component order.

FR-OP-020 Receive non-premium payments of insurers (AR Insurance)

BRD trace	CSHID.021 (p.41)	Actor	Cashier
Priority	Must have (not stated for this ID in the BRD)	Fit	NEW
Screens	Receive Payment (AR class AR Insurance); Receipts	API	POST ../receipts/ar (class AR_INSURANCE)

Description

A payment from an insurer that is not premium (refund of remitted premium, other expenses, AR Insurance) is received with the AR class of the non-premium group and the paying insurer. BIBS posts OPS_AR_INSURANCE_RECEIPT (Dr bank / Cr AR Insurer of the insurer) the same business day and does not route it to client premium or to remittance.

Preconditions

- The user has CASH_RECEIPT.

Main flow

- The cashier chooses AR class AR Insurance (or Refund / Other expenses) and the insurer as payor.
- BIBS issues the AR and posts it to AR Insurer.

Alternate and exception flows

- No insurer entered. BIBS refuses the AR.

Business rules

Rule	Statement	Kind	Maintained in
R1	Non-premium ARs never enter payment matching or remittance.	Fixed	-

Validations and messages

Check	Message shown	Code
Non-premium AR without insurer	A non-premium AR needs the paying insurer's code	AR_INSURANCE_PAYOR_REQUIRE D

Notifications

- None.

Audit

- As FR-OP-011.

Acceptance criteria

- An insurer refund received as AR Insurance posts Dr bank / Cr AR Insurer and does not change any client invoice.

FR-OP-021 Issue commission ORs from commission payment details

BRD trace	CSHID.007 (p.29)	Actor	Cashier; System
Priority	Must have	Fit	NEW
Screens	Commission ORs; Interfaces (feed COLLECTION_COMMISSION_PAYMENT)	API	GET .../commission-payments; POST .../commission-payments/issue; bulk COMMISSION_PAYMENT

Description

Commission payment details uploaded from Collection (bulk COMMISSION_PAYMENT or feed COLLECTION_COMMISSION_PAYMENT) are staged as lines. **Issue ORs** issues one OR per insurer, certificate and payment; lines of one group that name different payees are rejected. The OR is a cash receipt that credits the commission receivable and makes the deferred VAT due (OPS_OR_ISSUE).

When a remittance batch is approved, Remittance issues one commission OR per batch, with one line per invoice (FR-OP-035). Direct payment collections issue their OR the same way (FR-OP-094).

Preconditions

- The user has CASH_UPLOAD; a Head Office OR series is usable.

Main flow

- The cashier uploads the commission payment details.
- BIBS stages the lines and groups them by insurer, certificate and payment.
- The cashier clicks **Issue ORs**; BIBS issues one OR per group.

Alternate and exception flows

- A group with different payees is rejected and stays staged with the reason.

Business rules

Rule	Statement	Kind	Maintained in
R1	Consolidation only for the same insurer / payee and the same certificate.	Fixed	-
R2	Grouping rule to confirm (one OR per batch or per payment, OQ49).	Configurable	-

Validations and messages

Check	Message shown	Code
Feed record incomplete	<errors>	FLOW_IN_RECORD_INVALID
Unknown company in the feed	Unknown company <code>	FLOW_IN_COMPANY_UNKNOWN

Notifications

- None.

Audit

- Staged lines keep the upload job and row; each OR keeps its lines.

Acceptance criteria

- Three payment lines of one insurer and certificate are issued as one OR with three lines.
- A remittance batch of five invoices, once approved, carries one commission OR number.

Difference from the BRD. CSHID.007 says both "one OR per remittance batch number" and "OR per individual payment unless consolidation criteria are met" (OQ49). BIBS issues one OR per remittance batch for remittance, and one OR per insurer, certificate and payment for the Collection details.

FR-OP-022 Manage unapplied payments and their dispositions

BRD trace	CSHID.024 (p.42-43), CSHID.025 (p.43-44)	Actor	Cashier (assign, submit); Cashiering TL (approve)
Priority	Must have	Fit	NEW
Screens	Unapplied Payments (tabs Unapplied, Monitoring, For Approval, For Reversal, Done); Unapplied Payment page	API	GET .../unapplied; GET .../unapplied/{id}; POST / PUT .../unapplied/{id}/disposition; POST .../unapplied/{id}/submit, /approve, /withdraw, /reversal, /reversal/approve; POST .../unapplied/bulk/submit, /bulk/approve

Description

Every unapplied balance is an item UNP-yyyy-n with its origin (no match, excess, cancelled reference, adjustment, cancellation, DP reinstatement, remittance return, re-application, pre-booked, other), amount, balance, currency, client and unit. The workbench tabs follow the stage of workflow OPS_DISPOSITION.

The cashier assigns a disposition type from DISPOSITION_TYPE: Apply to other invoice; DST payment application; Refund; Reclass; Transfer to other marketing unit; Others. Each type has an action (APPLY, DST_APPLY, REFUND, RECLASS, TRANSFER, MANUAL) and says whether it needs approval.

Effects: APPLY applies the amount through the hierarchy to another booked invoice; DST_APPLY applies to its DST only; REFUND sends a request to Disbursement and posts OPS_UNAPPLIED_REFUND when paid; RECLASS and TRANSFER post OPS_UNAPPLIED_RECLASS for the whole balance to another client or unit; MANUAL releases the balance settled outside BIBS.

A completed disposition can be marked for reversal with a reason and is reversed on approval; a refund is reversed only after Disbursement returned it. A balance left after a partial disposition goes back to the Unapplied tab.

Preconditions

- The user has CASH_DISPOSITION.

Main flow

- The cashier opens the Unapplied tab and selects an item.
- The cashier assigns a disposition with the amount and target; the item moves to Monitoring.
- For a type that needs approval the cashier submits; the item moves to For Approval.
- The TL approves; BIBS executes the disposition and the item moves to Done.

Alternate and exception flows

- Type without approval. The cashier clicks **Process Disposition**; BIBS executes it at once.
- The TL returns the disposition to the cashier with a reason (Monitoring).
- The cashier withdraws a disposition in Monitoring; the item returns to Unapplied.
- Reversal. The cashier marks a completed disposition for reversal; the TL approves or rejects the reversal.
- Submit and approve are also done in bulk on a selection.

Business rules

Rule	Statement	Kind	Maintained in
R1	Refund, reclass, transfer and others need approval; apply and DST application do not (default, OQ15).	Configurable	Disposition type rules
R2	The approver is never the requester.	Fixed	-
R3	Reclass and transfer move the whole balance.	Fixed	-

Validations and messages

Check	Message shown	Code
Amount above the balance	The amount must be above zero and at most the balance <balance>	DISPOSITION_AMOUNT

Target takes no client payment	Invoice <no> takes no client payment	DISPOSITION_INVOICE_NOT_RECEIVABLE
Nothing outstanding on the target	Invoice <no> has nothing outstanding to apply to	DISPOSITION_NOTHING_TO_APPLY
Reclass of part of the balance	A reclass or transfer moves the whole balance <balance>	DISPOSITION_WHOLE_BALANCE
Type without processing rule	Disposition type <type> has no processing rule (OQ15)	DISPOSITION_TYPE_NOT_CONFIGURED
Approver is the requester	The requester cannot approve the disposition	MAKER_CHECKER_VIOLATION
Reversal without reason	Enter the reason for the reversal	REVERSAL_REASON_REQUIRED
Refund reversed before return	A refund is reversed only after Disbursement returned the request	REFUND_NOT_RETURNED
Action in the wrong tab	<ref> is <stage>, not <expected>	UNAPPLIED_WRONG_STAGE

Screens and fields: Disposition

Field	Type	Mand.	Source / LOV	Validation
Disposition Type	List	Yes	LOV DISPOSITION_TYPE	Type with a processing rule
Amount	Amount	Yes	-	> 0 and <= balance; whole balance for reclass / transfer
Target invoice / client / unit	Look-up	Cond.	Ledger / client master / units	By type
Remarks	Text	No	-	-

Notifications

- CASH_APPROVAL_REQUEST to the approvers on submission.

Audit

- Every disposition, approval, return and reversal is kept in the item history with user, time and reason.

Acceptance criteria

- An excess of 500.00 applied to another booked invoice of the client clears 500.00 of that invoice in hierarchy order.
- A refund needs TL approval and creates a Disbursement request; the item is Done when Disbursement pays it.
- The cashier who submitted a refund cannot approve it.
- The tabs show each item in the tab of its stage.

FR-OP-023 Reverse minimal balances automatically

BRD trace	CSHID.016 (p.37-38)	Actor	System (job MINIMAL_BALANCE_SWEEP); Cashiering TL (run now)
Priority	Must have	Fit	NEW
Screens	Cashiering Setup (Minimal Balance, Run Sweep Now); Reports CSH-MINBAL-PREMIUM, CSH-MINBAL-EXCESS	API	GET .../minimal-balance/rules; POST .../minimal-balance/sweep

Description

The sweep (daily 04:00 PHT, or **Run Sweep Now**) applies the rules of the minimal balance table: premium receivable balances of PHP 10.00 or less are reversed (OPS_MINIMAL_BALANCE_REVERSAL, ledger MIN_BAL), unless the balance equals the client's 2% CWT, the DST charged or the whole premium; excess and unapplied payments of PHP 10.00 or less go to AP overages (OPS_EXCESS_TO_OVERAGES).

Each invoice component is reversed once; an invoice already written off is skipped.

Preconditions

- None (job).

Main flow

- The job reads the active rules.
- For each invoice with a PR balance at or below the limit, BIBS checks the exclusions and reverses the balance.
- For each unapplied item at or below the limit, BIBS moves it to AP overages and closes it.
- BIBS logs the sweep once.

Business rules

Rule	Statement	Kind	Maintained in
R1	PREMIUM rule 10.00, REVERSE, excluding CWT, DST and whole premium.	Configurable	Minimal balance rules; parameter MIN_BALANCE_AUTO_MAX
R2	EXCESS rule 10.00 to AP overages.	Configurable	Minimal balance rules
R3	COMMISSION rule inactive until BDOI confirms it (OQ11).	Configurable	Minimal balance rules

Notifications

- None.

Audit

- Each reversal is recorded once in the sweep log and as a ledger movement.

Acceptance criteria

1. A PR balance of 5.00 is reversed by the sweep; running the sweep again changes nothing.
2. A PR balance of 5.00 that equals the DST charged is not reversed.
3. An unapplied excess of 8.00 moves to AP overages.

Difference from the BRD. The BRD has three minimal balance rules that overlap at 10.00 (CSHID.016, Cashiering summary 5.f, ADJID.026; OQ11). BIBS keeps them as configurable rules and never reverses an invoice twice: the sweep skips invoices written off by the file of FR-OP-059.

FR-OP-024 Search receipts and keep the receipt audit trail

BRD trace	CSHID.010 (p.33-34), CSHID.011 (p.34-35)	Actor	Cashier; Auditor
Priority	Must have	Fit	CHANGE (CSHID.010), FIT (CSHID.011)
Screens	Receipts (search); Receipt page (History)	API	GET ../receipts; GET ../receipts/{id}

Description

Receipts are searched by AR number, OR number, client number, invoice number, payor, assured, amount, date of issuance, policy number and insurer name, singly or combined, with kind and status filters. Names match partially; results are paged. Each search is logged with user, criteria and time.

Every action on a receipt (create, print, cancel, reinstate, apply, approve) records the AR / OR number, username, time, action and module in the immutable audit trail; the receipt's History tab shows it.

Preconditions

- The user has CASH_RECEIPT.

Main flow

1. The user enters one or more criteria.
2. BIBS lists the matching receipts.
3. The user opens a receipt and reads its History.

Business rules

Rule	Statement	Kind	Maintained in
R1	Search logs are kept; retention to be confirmed (OQ47).	Configurable	-
R2	Audit rows cannot be changed or deleted.	Fixed	-

Notifications

- None.

Audit

- This FR is the receipt audit; searches are logged in the search log.

Acceptance criteria

1. A search by partial assured name and date range returns the matching ARs.
2. The History tab of a cancelled AR shows the creation, the cancellation request and approval with users and times.

FR-OP-025 Print ARs and ORs in batch

BRD trace	CSHID.019 (p.39-40)	Actor	Cashier
Priority	Not stated in the BRD	Fit	NEW
Screens	Batch Print	API	GET / POST ../print-batches; GET ../print-batches/{id}; POST ../print-batches/{id}/retry; GET ../print-batches/{id}/file

Description

The cashier selects receipts by filter (kind, date range, insurer, BDOI location) or from a list, previews the list and prints them as one merged PDF (batch PRB-yyyy-n). A copy of each receipt is kept. The batch shows progress and lists failures, which the cashier retries or skips.

Preconditions

- The user has CASH_PRINT.

Main flow

1. The cashier sets the filter and previews the receipts.
2. The cashier starts the batch; BIBS renders the receipts into one PDF.
3. The cashier downloads or prints the file.

Alternate and exception flows

- Failures. The cashier clicks **Retry** for the failed receipts.

Business rules

Rule	Statement	Kind	Maintained in
R1	At most 500 receipts per batch.	Fixed	-

Validations and messages

Check	Message shown	Code
Selection empty or above 500	Select between 1 and 500 receipts to print	PRINT_SELECTION
Retry without failures	<batch> has no failures	PRINT_NOTHING_FAILED

Screens and fields: Batch Print (filter)

Field	Type	Mand.	Source / LOV	Validation
Kind	List	No	AR / OR	-
Date From / Date To	Date	No	-	From <= To
Insurer Code	Look-up	No	Insurer master	-

Notifications

- None.

Audit

- Each batch is logged with user, time and count (print log).

Acceptance criteria

- A batch of 50 ARs of one branch is produced as one PDF within 10 seconds (section 8).
- A failed receipt is listed and printed on retry.

FR-OP-026 Process BIR 2307 reversals

BRD trace	CSHID.026 (p.44), CSHID.027 (p.44-45)	Actor	Marketing Collection (tag); Cashier (validate, route); Disbursement (release)
Priority	Must have	Fit	NEW
Screens	BIR 2307 (tags, batches)	API	GET / POST .../cwt; GET .../cwt/expected; POST .../cwt/{id}/receive, /checklist, /settle-cash; GET / POST .../cwt/batches; POST .../cwt/batches/{id}/route, /release

Description

Marketing tags the 2307 of an invoice with the reference CWT-yyyy-n (FR-OP-113). Cashiering receives the tag and ticks the CWT-copy checklist. For the certificate path, the cashier validates a selection of tags of one insurer into a batch CWT-yyyy-n; BIBS generates the BIR 2307 transaction report and posts OPS_CWT_RECLASS (Dr PR2307 / Cr PR by component), which zeroes the PR.

The batch is routed to Disbursement directly, not through Remittance (type CWT2307). When Disbursement pays it, the batch is released to the insurer and BIBS posts OPS_CWT_DTIP_OFFSET (Dr DTIP / Cr PR2307).

For the cash path the client pays the 2% in cash; the cashier clicks **Settle in Cash**, an AR is issued and applied to the withheld 2%.

Preconditions

- The user has CWT_PROCESS; the invoice has a 2% CWT portion outstanding.

Main flow

- Cashiering receives a tagged 2307 (workflow OPS_CWT_2307, section 5).
- The cashier checks the CWT copy and ticks the checklist.
- The cashier selects tags of one insurer and validates them; BIBS creates the batch, the report and the reclass entries.
- The cashier routes the batch to Disbursement.
- Disbursement pays and releases it to the insurer; BIBS posts the DTIP offset.

Alternate and exception flows

- The cashier returns a tag to Marketing with a reason (for example the CWT copy is missing).
- Cash path. **Settle in Cash** issues the AR and closes the tag as SETTLED_CASH.

Business rules

Rule	Statement	Kind	Maintained in
R1	A 2307 batch holds the certificates of one insurer.	Fixed	-
R2	A tag is validated only when its CWT copy was received.	Fixed	-

Rule	Statement	Kind	Maintained in
R3	When the DTIP offset is posted (validation or release) is to be confirmed (OQ16); BIBS posts it on release.	Configurable	-

Validations and messages

Check	Message shown	Code
Tags of several insurers	A 2307 batch holds the certificates of one insurer (CSHID.027)	CWT_BATCH_ONE_INSURER
CWT copy not received	The CWT copy of <ref> was not received	CWT_COPY_MISSING
No selection	Select the 2307 tags to validate	CWT_BATCH_EMPTY
Tag settled in cash in a batch	<ref> is settled in cash	CWT_CASH_IN_BATCH
Settle in cash a certificate tag	<ref> is a certificate tag	CWT_NOT_CASH
PR below the 2307 amount	<ref>: the invoice has less premium outstanding than the 2307 amount	CWT_AMOUNT_MISMATCH
Batch already routed	<batch> is <status>	CWT_BATCH_ROUTED
Tag in another stage	<ref> is <stage>	CWT_WRONG_STAGE

Notifications

- Disbursement queue entry when the batch is routed.

Audit

- Each tag and batch keeps its workflow history; the report CSH-2307-TXN is kept with the batch.

Acceptance criteria

- Validating two tags of one insurer posts Dr PR2307 / Cr PR and zeroes the 2% PR of both invoices.
- A batch with tags of two insurers is refused.
- After Disbursement pays the batch, release posts Dr DTIP / Cr PR2307.

Superseded source. The Marketing tagging is replaced in BRD-4 by the Collections disposition "PR 2307 for reversal" (OQ45); the Disbursement step moves to the Disbursement module of BRD-5 (OQ02). The Cashiering validation, report and postings stay as built.

FR-OP-027 Post the accounting entries of Cashiering

BRD trace	CSHID.012 (p.35), CSHID.013 (p.35-36), CSHID.014 (p.36)	Actor	System
Priority	Must have (CSHID.013: not stated in the BRD)	Fit	CHANGE (CSHID.012, 014), NEW (CSHID.013)
Screens	Receipt page (Journal)	API	Accounting engine (business events)

Description

Each Cashiering transaction is a business event whose GL rule is configured by Comptrollership: OPS_AR_RECEIPT (AR issued), OPS_AR_INSURANCE_RECEIPT, OPS_OR_ISSUE, OPS_PAYMENT_APPLY, OPS_RECEIPT_REINSTATE, OPS_CWT_RECLASS, OPS_CWT_DTIP_OFFSET, OPS_EXCESS_TO_OVERAGES, OPS_MINIMAL_BALANCE_REVERSAL, OPS_UNAPPLIED_REFUND, OPS_UNAPPLIED_RECLASS. Section 5.3 lists the default entries.

A cancellation re-posts the original events with negative amounts; a reinstatement posts OPS_RECEIPT_REINSTATE and a new application. Amounts in foreign currency are converted to pesos at the Comptrollership BOOK rate with 2 decimals.

Preconditions

- The GL rules of the events are configured (OQ07).

Main flow

- A Cashiering transaction is posted.
- BIBS raises the business event with its amounts, party, cost centre and business line.
- The accounting engine creates and posts the balanced journal; the journal batch is linked on the receipt and the ledger movement.

Business rules

Rule	Statement	Kind	Maintained in
R1	GL accounts are never chosen in code; Comptrollership configures the rules (maker-checker).	Configurable	Accounting rules
R2	The bank and cash-on-hand accounts of the @BANK role come from the parameters CASH_BANK_ACCOUNT and CASH_ON_HAND_ACCOUNT.	Configurable	Parameters
R3	BOOK rate with 2 decimals, maintained on Currency Rates until its source is agreed (OQ08).	Configurable	Rate type BOOK

Notifications

- None.

Audit

- Journals are immutable; a correction is a reversing event.

Acceptance criteria

- Issuing, applying and cancelling an AR produce three balanced journals; the cancellation nets the first two to zero.
- A USD AR posts pesos at the BOOK rate of the receipt date.

FR-OP-028 Generate the Cashiering reports

BRD trace	CSHID.023 (p.42 and p.125-127)	Actor	Cashier; Cashiering TL; Comptrollership
Priority	Must have	Fit	NEW
Screens	Reports (category Operations)	API	/api/v1/reports (CSH-*)

Description

BIBS provides the 21 Cashiering reports of Annex II plus the outstanding AR report, the batch run report and the BIR 2307 transaction report (24 reports, section 6.1). Reports whose fields the Annex does not give carry a draft layout note until BDOI confirms them (OQ42); ageing buckets are to be confirmed (OQ43).

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

1. The user chooses the report and its parameters.
2. BIBS generates it; the user views, downloads or prints it (FR-OP-009).

Business rules

Rule	Statement	Kind	Maintained in
R1	Layouts of Annex II reports 9-18, 20 and 21 are drafts (OQ42).	Configurable	Report layouts

Notifications

- None.

Audit

- Runs are archived (FR-OP-009).

Acceptance criteria

1. CSH-APPLIED-PREM lists AR no., date, amount paid, invoice, payor, risk code, count and total for the chosen dates, in PDF and Excel.
2. CSH-CANCELLED-AR lists the cancelled ARs with their reason.

4.3 Remittance

Remittance extracts what clients paid, groups it into batches per insurer and type, gets the batches approved, asks Disbursement to pay the insurer and records the insurer's OR. API paths of this section are under /api/v1/remittance.

FR-OP-030 Extract remittances by schedule, insurer or invoice

BRD trace	RMTID.001 (p.49), RMTID.003 (p.50-51), RMTID.004 (p.51-52), RMTID.005 (p.52), RMTID.007 (p.52-53), RMTID.008 (p.53)	Actor	System (job REMITTANCE_EXTRACTION); Remittance Processor
Priority	Must have	Fit	NEW (RMTID.001, 004, 005, 007), CHANGE (RMTID.003), CONFIGURE (RMTID.008)
Screens	Extraction; DTIP Status; Remittance Batches	API	GET / POST .../runs; GET .../runs/{id}; GET .../runs/{id}/tags; GET / POST .../eod-requests

Description

An extraction run REX-yyyy-n examines the invoices of an insurer whose remittance status is UNPROCESSED, WITH_OUTSTANDING_BALANCE or PARTIALLY_REMITTED. It is started by the scheduled job (daily off-peak, 20:00 PHT by default), manually for an insurer and remittance type, or for one invoice number. Each insurer is processed in its own transaction.

Every invoice examined gets a tag: EXTRACTED; UNEXTRACTED_DUE (with its blocking reasons, FR-OP-031); UNEXTRACTED_NOT_DUE; RETURNED (extracted then returned by a user).

Extracted invoices are grouped into batches RMB-<insurer>-yyyy-n per insurer and remittance type (WITH_INCENTIVES, NORMAL_PHP, NORMAL_USD, SPECIAL), assigned to a processor and opened at

stage REVIEW_IN_PROCESS (FR-OP-033). Each invoice in a batch is locked by REMITTANCE. The extract file is stored in the extract repository, named by REMIT_FILE_PATTERN.

A processor searching an invoice during the day can queue it for the end-of-day run (RMTID.005); the evening run extracts the queued invoices once.

Preconditions

- The user has REMIT_EXTRACT for a manual run.

Main flow

- The job or the processor starts a run for one or all insurers.
- BIBS checks each invoice against the eligibility rules and tags it.
- BIBS groups the extracted invoices into batches, locks them and writes the extract file.
- BIBS notifies the processors (REMIT_EXTRACTION_DONE).

Alternate and exception flows

- Single invoice. The processor enters the invoice and insurer; BIBS extracts it or says why it cannot.
- End-of-day request. The processor queues an invoice; the evening run takes it.
- A run fails for one insurer. The other insurers continue; BIBS raises REMIT_EXTRACTION_FAILED.

Business rules

Rule	Statement	Kind	Maintained in
R1	The remittance type is WITH_INCENTIVES when an early remittance rule covers the invoice (FR-OP-038), otherwise NORMAL_PHP or NORMAL_USD by currency.	Configurable	Incentive rules; classification to confirm (OQ17)
R2	Batch numbers RMB-<insurer>-yyyy-n are unique and never reused.	Fixed	-
R3	Schedule of the job.	Configurable	Job REMITTANCE_EXTRACTION (brokerverse.jobs.remittance-extraction-cron)
R4	Extract file naming.	Configurable	Parameter REMIT_FILE_PATTERN (OQ17)

Validations and messages

Check	Message shown	Code
Invoice of another insurer	Invoice <no> is not an invoice of <insurer>	REMIT_INVOICE_INSURER
Invoice not extractable	Invoice <no> cannot be extracted: remittance status <status>	REMIT_INVOICE_NOT_EXTRACTABLE
Invoice not eligible now	Invoice <no> cannot be remitted now: <reasons>	SPECIAL_REMIT_NOT_ELIGIBLE

Screens and fields: Extraction (manual run)

Field	Type	Mand.	Source / LOV	Validation
Insurer Code	Look-up	Yes	Insurer master	Active insurer
Remittance Type	List	No	LOV REMITTANCE_TYPE	Blank = all
Invoice No.	Text	No	Invoice ledger	For a single-invoice extraction

Notifications

- REMIT_EXTRACTION_DONE to the holders of REMIT_PROCESS; REMIT_EXTRACTION_FAILED alert on failure.

Audit

- Each run keeps its trigger, counts, file and the tag of every invoice examined.

Acceptance criteria

- The scheduled run extracts a paid and cleared invoice of INS-MGIC into a batch RMB-INS-MGIC-2026-n with tag EXTRACTED and locks it.
- An invoice on hold is tagged UNEXTRACTED_DUE with reason ON_HOLD.
- A manual extraction of an invoice of another insurer is refused with REMIT_INVOICE_INSURER.
- An invoice queued for the end of day is extracted by the evening run, once.

Difference from the BRD. RMTID.005 asks to "trigger extraction at the end of day if payment application is searched" (OQ18). BIBS lets the processor queue the searched invoice for the evening run. RMTID.001 asks to save extracts on a shared drive with a folder per type; BIBS stores them in the in-system extract repository behind the FileDropPort seam (OQ17).

FR-OP-031 Apply the remittance eligibility rules

BRD trace	RMTID.006 (p.52), RMTID.014 (p.56-57), RMTID.015 (p.57), RMTID.017 (p.58-59), RMTID.018 (p.59), RMTID.020 (p.60-61), RMTID.022 (p.61-62), RMTID.028 (p.64), RMTID.031 (p.65-66), RMTID.035 (p.67)	Actor	System
Priority	Must have	Fit	NEW (RMTID.006, 014, 015, 020, 022, 028, 031, 035), CHANGE (RMTID.017, 018)
Screens	Extraction (run tags); DTIP Status; Report REM-PAIDAR-OVER-DTIP; Report REM-EXCLUDED	API	GET ../runs/{id}/tags; GET ../dtip

Description

Paid AR is the net applied PR of the invoice from applied and posted payments only (cash, check and every channel). The amount to remit is paid AR less the DTIP already remitted.

An invoice is not extracted, and its tag lists the reason, when: ON_HOLD (hold flag); PENDING_NEG_ADJ (a negative adjustment request is pending); WRITTEN_OFF; CHECK_HOLDING (a payment is younger than 3 banking days or not cleared); PAID_AR_OVER_DTIP (paid AR above the DTIP balance); NOT_POSTED; OTHERS (another team holds the lock). Cancelled, direct payment and return invoices are skipped.

Written-off invoices are excluded from every output but remain visible and marked in Invoice 360 and the tags.

When a negative adjustment is requested on an invoice, Adjustment raises PENDING_NEG_ADJ and Remittance notifies the Remittance Team with the batch the invoice is in (RMTID.035).

Preconditions

- None (applied by every extraction and again at submission and approval).

Main flow

1. BIBS reads the ledger balances, flags and payments of the invoice.
2. BIBS evaluates each rule and records the reasons.
3. BIBS extracts the invoice only when no rule blocks it.

Alternate and exception flows

- Paid AR above DTIP with mode CAP. BIBS extracts the invoice for the DTIP balance only and records the difference.

Business rules

Rule	Statement	Kind	Maintained in
R1	Holding period 3 banking days on the branch calendar, counted from the last applied value date.	Configurable	Parameter REMIT_CHECK_HOLD_DAYS (3)
R2	Paid AR above DTIP excluded by default; CAP remits the DTIP balance.	Configurable	Parameter REMIT_PAIDAR_OVER_DTIP_MODE (EXCLUDE)
R3	Negative DTIP is never extracted.	Fixed	-
R4	The rules are checked again at submission and approval (FR-OP-033, FR-OP-035).	Fixed	-

Notifications

- REMIT_PAIDAR_OVER_DTIP alert per invoice; REMIT_NEG_ADJ_PENDING to the Remittance Team.

Audit

- Each run keeps the rule results per invoice.

Acceptance criteria

1. An invoice paid by check two banking days ago is UNEXTRACTED_DUE with CHECK_HOLDING and is extracted on the third banking day.
2. An invoice with paid AR 10,500.00 and DTIP 10,000.00 is excluded and listed on REM-PAIDAR-OVER-DTIP with invoice, insurer, paid AR and DTIP.
3. A written-off invoice is never in a batch and shows WRITTEN_OFF on Invoice 360.
4. Submitting a negative adjustment on an invoice in a batch notifies the Remittance Team.

Differences from the BRD. RMTID.014: the expected result caps the remittance at the DTIP balance, while the acceptance criteria exclude the account (OQ19); BIBS excludes by default and caps when the parameter is set to CAP. RMTID.017: the start of the holding period (AR date or deposit date) and the source of "cleared" are open (OQ20); BIBS counts from the last applied value date.

FR-OP-032 Review a batch and exclude records (addendum)

BRD trace	RMTID.002 (p.50 and addendum p.4-5), RMTID.024 (p.62-63), RMTID.027 (p.64)	Actor	Remittance Processor
Priority	Must have	Fit	NEW (RMTID.002, 024), CHANGE (RMTID.027)
Screens	Remittance Batches (queues by stage); Remittance Batch (totals, lines, exclusions, preview)	API	GET ../batches; GET ../batches/{id}; GET ../batches/{id}/preview; POST ../batches/{id}/exclude, /restore

Description

The Remittance Batches screen lists the batches by stage (queues) with insurer, type, processor, counts and totals; it filters by insurer and type and supports bulk submit and approve.

The batch page shows a read-only totals strip (paid AR, commission, VAT, WTAX, DTIP, incentive, net due, payable), the lines, the exclusions panel, the workflow panel and the documents. Financial values cannot be edited (addendum).

The processor marks lines for exclusion with a reason; the invoice is unlocked and can be taken by a later run. An exclusion can be restored while the batch is editable. **Preview submission** shows the resulting dataset before submission. Only non-excluded lines are posted and pushed to Disbursement; every exclusion and restore is kept.

Preconditions

- The user has REMIT_EXCLUDE; the batch is in REVIEW_IN_PROCESS or ON_HOLD.

Main flow

1. The processor opens the batch and reviews the lines.
2. The processor selects lines, clicks **Exclude Accounts**, chooses a reason and writes a comment.
3. BIBS excludes the lines, unlocks the invoices and recomputes the totals.
4. The processor previews the submission.

Alternate and exception flows

- Restore. The processor restores an excluded line; BIBS locks the invoice again.
- The invoice can no longer be restored (taken by another batch, changed status). BIBS refuses the restore.

Business rules

Rule	Statement	Kind	Maintained in
R1	Exclusion only; no endpoint changes amounts.	Fixed	-
R2	Exclusion reasons from the list.	Configurable	LOV REMIT_EXCLUSION_REASON
R3	Exclusion and restore only while the batch can change.	Fixed	-

Validations and messages

Check	Message shown	Code
Line already excluded	Invoice <no> is already excluded	REMIT_LINE_ALREADY_EXCLUDED
Restore of a line not excluded	Invoice <no> is not excluded	REMIT_LINE_NOT_EXCLUDED

Check	Message shown	Code
Restore no longer possible	Invoice <no> can no longer be restored (remittance status <status>)	REMIT_RESTORE_NOT_ELIGIBLE
Batch no longer editable	Batch <no> is <stage>: lines can no longer change	REMIT_BATCH_STAGE
Exclusion without permission	You are not permitted to perform this action	ACCESS_DENIED

Screens and fields: Exclude Accounts

Field	Type	Mand.	Source / LOV	Validation
Reason	List	Yes	LOV REMIT_EXCLUSION_REASON	-
Comment	Text	Cond.	-	Required for Others

Notifications

- None.

Audit

- Each exclusion and restore keeps user, time, reason and comment on the line.

Acceptance criteria

1. The processor cannot change the paid AR or commission of a line.
2. Excluding a line removes it from the totals and the preview and unlocks the invoice.
3. A restored line is back in the totals.
4. Only the remaining lines are posted on approval.

Addendum. The main BRD (p.50) allowed online editing of the extract and pushing it "with or without edit". Addendum 1 (p.4-5) replaces it with exclusion only; BIBS follows the addendum.

FR-OP-033 Process a batch - assign, submit, hold and return

BRD trace	RMTID.009 (p.53-54), RMTID.010 (p.54), RMTID.019 (p.59-60), RMTID.029 (p.64-65)	Actor	Remittance Processor; Remittance TL
Priority	Must have	Fit	CHANGE (RMTID.009, 010, 029), NEW (RMTID.019)
Screens	Remittance Batch (workflow panel); Remittance Batches	API	POST .../batches/{id}/submit, /return, /assign

Description

Each batch is a case of workflow OPS_REMITTANCE (section 5), starting at REVIEW_IN_PROCESS with its processor. The TL re-assigns it to another processor.

Submit for approval checks every included line again: still locked by Remittance, and not cancelled, on hold, written off or flagged PENDING_NEG_ADJ, and the batch not empty. A batch can be put on hold with a reason and released, or returned with a reason; a return unlocks the lines and tags them RETURNED so a later run can take them again.

The invoice keeps its remittance status (REVIEW_IN_PROCESS, APPROVED, PARTIALLY_REMITTED, FULLY_REMITTED, REQUESTED_FOR_HOLD, UNPROCESSED, UNAPPLIED_PAYMENT, WITH_OUTSTANDING_BALANCE); the batch has its own stage.

Preconditions

- The user has REMIT_PROCESS.

Main flow

- The processor reviews the batch (FR-OP-032).
- The processor clicks **Submit for approval**.
- BIBS validates the lines and moves the batch to FOR_APPROVAL; the approvers are notified.

Alternate and exception flows

- Hold. The processor holds the batch with a reason; **Release batch** returns it to review.
- Return. The processor or TL returns the batch with a reason; the lines are unlocked and tagged RETURNED.
- Re-assign. The TL assigns the batch to another active processor.
- A line became invalid. Submission is refused and lists the problems.

Business rules

Rule	Statement	Kind	Maintained in
R1	No double submission; the workflow accepts submit only from REVIEW_IN_PROCESS.	Fixed	-
R2	Return and hold reasons from the lists.	Configurable	LOV REMIT_RETURN_REASON; LOV HOLD_REASON

Validations and messages

Check	Message shown	Code
Batch without lines	Batch <no> has no invoice left to remit	REMIT_BATCH_EMPTY
Line no longer valid	Batch <no> cannot go on: <problems>	REMIT_SUBMISSION_INVALID
Return after approval	Batch <no> can no longer return	REMIT_BATCH_STAGE
Return without reason	Select a reason for '<action>'	WORKFLOW_REASON_REQUIRED

Notifications

- REMIT_BATCH_FOR_APPROVAL to the approvers on submission; REMIT_BATCH_DECIDED to the processor on return.

Audit

- Each transition is in the batch history with user, time, reason and comment.

Acceptance criteria

- A batch with one line placed on hold after extraction cannot be submitted; the message names the invoice and HOLD.
- A returned batch releases its invoices; the next run extracts them again.
- The TL re-assigns a batch; the new processor sees it in the queue.

Difference from the BRD. RMTID.019 lists eight statuses that mix payment states (Unapplied Payment, With Outstanding Balance) and remittance states (OQ21). BIBS keeps the payment status and the remittance status of the invoice separately and gives the batch its own stages.

FR-OP-034 Produce the remittance schedule and payment request

BRD trace	RMTID.011 (p.54-55)	Actor	Remittance Processor
Priority	Must have	Fit	CHANGE
Screens	Remittance Batch (Documents)	API	GET .../batches/{id}/documents/{kind}

Description

The remittance schedule (PDF and XLSX) and the payment request (PDF) are generated from the templates REMITTANCE_SCHEDULE and REMITTANCE_PAYMENT_REQUEST and stored on the batch. They show the batch number, insurer, remittance type and the payment details per invoice; the layouts follow Annex III (Normal, Special, With Incentives).

Preconditions

- The batch is submitted or approved.

Main flow

- The processor opens the Documents tab of the batch.
- The processor downloads or prints the schedule and the payment request.

Business rules

Rule	Statement	Kind	Maintained in
R1	Schedule layouts are drafts until BDOI confirms them (Mall Assurance columns of the Normal schedule, OQ42).	Configurable	Document templates
R2	A document is generated from stored values, so a regenerated file shows the same content.	Fixed	-

Notifications

- None.

Audit

- Document generation is recorded on the batch.

Acceptance criteria

- The schedule of an approved batch lists each invoice with paid AR, realised commission, VAT, WTAX, DTIP and net due, and the totals equal the batch totals.
- The payment request shows the payable amount, insurer and approver.

FR-OP-035 Approve a batch, post the remittance and request payment

BRD trace	RMTID.010 (p.54), RMTID.019 (p.59-60)	Actor	Remittance TL
Priority	Must have	Fit	CHANGE
Screens	Remittance Batch (workflow panel)	API	POST .../batches/{id}/approve

Description

The TL approves the submitted batch (**Approve and push to Disbursement**). In the approval transaction BIBS: re-checks every line; posts OPS_REMITTANCE per line (Dr DTIP, Dr CWT / Cr commission receivable, Cr due to insurer for disbursement); records REMITTED movements on DTIP, commission, VAT and WTAX and sets the invoices APPROVED; for a With Incentives batch posts

OPS_REMIT_INCENTIVE; sends a payment request of type REMITTANCE for the payable to Disbursement; and issues the commission OR (and the incentive OR) through Cashiering.

Commission, VAT and WTAX are realised pro rata on the cumulative DTIP remitted; the remittance that clears the DTIP takes the remaining balances. Net due = paid AR + WTAX - commission - VAT; payable = net due - incentive with VAT.

Preconditions

- The batch is FOR_APPROVAL; the user has REMIT_APPROVE and did not submit it.

Main flow

- The TL reviews the batch and its preview.
- The TL approves.
- BIBS posts, sends the payment request and issues the ORs; the batch moves to APPROVED.

Alternate and exception flows

- Send back. The TL sends the batch back to the processor with a reason (REVIEW_IN_PROCESS).
- Return. The TL returns the batch (RETURNED).

Business rules

Rule	Statement	Kind	Maintained in
R1	The approver is never the submitter.	Fixed	-
R2	Posting, payment request and ORs are idempotent on the batch.	Fixed	-

Validations and messages

Check	Message shown	Code
Approver is the submitter	Batch <no> must be approved by another user	REMIT_FOUR_EYES
Line no longer valid	Batch <no> cannot go on: <problems>	REMIT_SUBMISSION_INVALID

Notifications

- REMIT_BATCH_DECIDED to the processor; the Disbursement queue receives the request.

Audit

- The approval, journals, payment request number and OR numbers are recorded on the batch.

Acceptance criteria

- The processor who submitted a batch cannot approve it.
- Approval posts one balanced OPS_REMITTANCE journal per line and one payment request for the payable.
- The batch shows the commission OR number issued by Cashiering.

FR-OP-036 Follow Disbursement and track remittance status

BRD trace	RMTID.034 (p.67), RMTID.036 (p.67-68)	Actor	System; Remittance Processor
Priority	Must have	Fit	CHANGE
Screens	Remittance Batch (workflow panel, history); Invoice 360 (Remittances); Disbursement Queue	API	GET ../batches/{id}; GET /api/v1/ops/invoices/{no}; /api/v1/ops/disbursements

Description

When Disbursement assigns the DV number, BIBS makes each invoice FULLY_REMITTED (no DTIP left) or PARTIALLY_REMITTED, releases the lock and moves the batch to FULLY_REMITTED or PARTIALLY_REMITTED. When Disbursement returns the request, the processors are notified.

The stage timeline of the batch and of the invoice shows every stage from extraction to disbursement with time stamps; users set their notification preferences per event (in-app, e-mail) on Notification Settings.

Preconditions

- The batch is APPROVED.

Main flow

- Disbursement acknowledges, assigns the DV and pays the request (FR-OP-120).
- BIBS updates the invoices and the batch and notifies the users.

Alternate and exception flows

- Disbursement returns the request. The processors are notified; re-sending is manual (OQ02).

Business rules

Rule	Statement	Kind	Maintained in
R1	Users may opt out of a notification event.	Configurable	Notification Settings

Notifications

- OPS_DISBURSEMENT_STATUS on each status change of the payment request.

Audit

- Each status change is kept with its time on the batch, the invoice and the request.

Acceptance criteria

- A DV assigned for the full payable makes the batch FULLY_REMITTED and unlocks its invoices.
- A user who switched off OPS_DISBURSEMENT_STATUS e-mails still sees the in-app notice.

FR-OP-037 Upload the insurer OR schedule and report exceptions

BRD trace	RMTID.012 (p.55-56), RMTID.013 (p.56), RMTID.016 (p.57-58)	Actor	Remittance Processor
Priority	Must have (RMTID.016: not stated in the BRD)	Fit	NEW (RMTID.012, 013), CHANGE (RMTID.016)
Screens	Insurer OR Upload (upload, history); Report REM-OR-EXCEPTION	API	POST ../insurer-or/upload; GET ../insurer-or/runs; GET ../insurer-or/runs/{id}; feed INSURER_REMIT_OR

Description

The insurer returns the remittance schedule with its OR number, date and amount per client invoice. The processor uploads it (columns batchNo, invoiceNo, orNo, orDate, orAmount); the upload runs through the feed INSURER_REMIT_OR, one record per invoice.

Each valid row sets the insurer OR on the batch line and the invoice. The line is MATCHED when the OR amount equals the paid AR, AMOUNT_MISMATCH otherwise. The batch reaches OR_RECEIVED when every included line has an OR.

The exception report REM-OR-EXCEPTION lists, per upload, the reference, OR amount, paid PR, status and reason, with a summary; it opens from the upload history.

Preconditions

- The user has REMIT_OR_UPLOAD; the batch is approved.

Main flow

- The processor uploads the insurer schedule.
- BIBS validates each row and updates the lines.
- BIBS shows the counts (records read, matches, amount mismatches, refused).
- The processor opens the exception report.

Alternate and exception flows

- Rows refused (unknown batch, excluded line, duplicate OR) are listed with their reason; the other rows are kept.

Business rules

Rule	Statement	Kind	Maintained in
R1	The OR amount is compared with the paid AR of the invoice, exact amount (tolerance to be given, OQ22).	Configurable	-
R2	An OR number is recorded once per client.	Fixed	-

Validations and messages

Check	Message shown	Code
Batch not approved	Batch <no> is <stage>: not yet approved	REMIT_OR_BATCH_STAGE
Line excluded	Invoice <no> was excluded from <batch>	REMIT_OR_LINE_EXCLUDED
OR already recorded	OR <no> was already recorded for client <client>	REMIT_OR_DUPLICATE
Missing column	The file must have the columns <columns>	FEED_FILE_COLUMNS
Missing value	Line <n>: <column> is missing	FEED_VALUE_MISSING
Bad date or amount	Line <n>: <column> must be YYYY-MM-DD / an amount	FEED_VALUE_INVALID
Empty file	The file has no lines	FEED_FILE_EMPTY

Notifications

- None.

Audit

- Each upload is a flow-in run with its records; the OR and its upload are kept on the line.

Acceptance criteria

1. An upload with the OR of every line moves the batch to OR_RECEIVED.
2. An OR amount 100.00 below the paid AR is AMOUNT_MISMATCH and listed on REM-OR-EXCEPTION.
3. A row without OR number is refused with its line number.

FR-OP-038 Apply the early remittance incentive

BRD trace	RMTID.023 (p.62)	Actor	Remittance TL (rules); System
Priority	Must have	Fit	NEW
Screens	Incentive Rules; Remittance Batch (incentive amounts)	API	GET / POST ../incentive-rules; PUT ../incentive-rules/{id}

Description

An incentive rule holds the insurer, product line (blank = all), segment (blank = all), rate as a percent of basic premium, window in days and the start of the window (inception or booking), with effective dates. An invoice remitted within the window goes into a With Incentives batch; its incentive = rate x basic premium share, with VAT at the invoice's VAT to commission ratio. On approval BIBS posts OPS_REMIT_INCENTIVE (Dr due for disbursement / Cr incentive income, output VAT) and issues the incentive OR.

The same rules are read by Production Reconciliation to validate early incentives (FR-OP-078).

Preconditions

- The user has REMIT_APPROVE to maintain rules.

Main flow

1. The TL adds a rule for an insurer.
2. Each extraction checks whether an invoice is within the window of a rule.
3. The incentive is computed on the batch and posted on approval.

Alternate and exception flows

- Remitted after the window. No incentive; the invoice goes to a Normal batch.

Business rules

Rule	Statement	Kind	Maintained in
R1	Rates, windows and basis per insurer (demo INS-MGIC Property CBG 2%, 30 days from inception; values from BDOI, OQ23).	Configurable	Incentive Rules

Validations and messages

Window Starts From	List	Yes	Inception / Booking	-
Effective From / Effective To	Date	Yes / No	-	To >= From
Description	Text	No	-	-

Notifications

- None.

Audit

- Rule changes are audited.

Acceptance criteria

1. A CBG property invoice of INS-MGIC remitted 20 days after inception is in a With Incentives batch with a 2% incentive.
2. The same invoice remitted after 40 days has no incentive.

FR-OP-039 Search remittance accounts and payment details

BRD trace	RMTID.025 (p.63)	Actor	Remittance Processor
Priority	Must have	Fit	NEW
Screens	DTIP Status; Remittance Batches	API	GET .../dtip; GET .../accounts; GET .../batches

Description

DTIP Status shows the DTIP position of each invoice with its remittance status and the last extraction tag and reasons. It searches by invoice number, remittance batch number, endorsement reference, policy number and assured name, partially and without regard to case or format, and filters by insurer and remittance status. From a result the user opens Invoice 360 (FR-OP-005).

Preconditions

- The user has REMIT_PROCESS.

Main flow

1. The processor enters a search value.
2. BIBS lists the matching invoices with DTIP, paid AR, remitted and tag.
3. The processor opens an invoice.

Screens and fields: DTIP Status (filters)

Field	Type	Mand.	Source / LOV	Validation
Search	Text	No	-	Invoice, batch, endorsement reference, policy or assured
Insurer Code	Look-up	No	Insurer master	-
Remittance Status	List	No	Remittance statuses	-

Notifications

- None.

Audit

- None (read only).

Acceptance criteria

1. Searching "dela cruz" finds the invoices of assured "DELA CRUZ, JUAN".
2. Searching a batch number lists the invoices of the batch.

FR-OP-040 Process special remittance requests in Remittance

BRD trace	RMTID.030 (p.65), RMTID.033 (p.66-67)	Actor	Remittance TL; Remittance Processor
Priority	Must have	Fit	NEW (RMTID.030), CONFIGURE (RMTID.033)
Screens	Special Remittance; Special Remittance Request	API	GET .../special; GET .../special/{id}; POST .../special/{id}/approve, /reject; feed COLLECTION_SPECIAL_REMIT

Description

Special remittance requests raised by Marketing (FR-OP-112) or received from Collection through the feed COLLECTION_SPECIAL_REMIT are listed with their condition, invoice, status and history. The TL approves or rejects them. Approval creates a SPECIAL batch at once, without a processor, so that another user approves the batch; the request follows the batch to PUSHED_TO_DISBURSEMENT or RETURNED.

Every status change is notified to the requester with the request number and new status.

Preconditions

- The user has SPECIAL_REMIT_APPROVE (decide) or REMIT_PROCESS (view).

Main flow

1. The TL opens a request FOR_APPROVAL.
2. The TL approves; BIBS creates the SPECIAL batch and extracts the invoice into it.
3. The batch goes through FR-OP-033 and FR-OP-035; the request becomes PUSHED_TO_DISBURSEMENT.

Alternate and exception flows

- Reject with a reason (REJECTED).
- The batch is returned; the request becomes RETURNED.

Business rules

Rule	Statement	Kind	Maintained in
R1	The approver is never the requester.	Fixed	-
R2	Stage notifications are configured per stage.	Configurable	Workflow OPS_SPECIAL_REMIT

Validations and messages

Check	Message shown	Code
Approver is the requester	Request <no> must be approved by another user	SPECIAL_REMIT_FOUR_EYES

Notifications

- The requester on approval, rejection, push and return.

Audit

- The request history keeps each decision with user, time and reason.

Acceptance criteria

- Approving a special remittance creates a SPECIAL batch containing the invoice.
- The requester receives a notice with the request number when the batch is pushed to Disbursement.

FR-OP-041 Generate the Remittance reports

BRD trace	RMTID.039 (p.69 and p.127-129)	Actor	Remittance Processor; Remittance TL
Priority	Must have	Fit	NEW
Screens	Reports (category Operations)	API	/api/v1/reports (REM-*)

Description

BIBS provides the 8 Remittance reports of Annex III and four more (REM-PAIDAR-OVER-DTIP, REM-OR-EXCEPTION, REM-EXCLUDED, REM-HOLD), section 6.2. Layouts the Annex does not detail are drafts (OQ42).

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

- The user chooses the report and its parameters and generates it.

Business rules

Rule	Statement	Kind	Maintained in
R1	Layout of report 8 (List of Remitted Accounts with Batch Number) is a draft (OQ42).	Configurable	Report layouts

Notifications

- None.

Audit

- Runs are archived (FR-OP-009).

Acceptance criteria

1. REM-TRACKER lists insurer, remit type, batch number, accounts extracted, net due, incentive and due date.
2. REM-DTIP-DETAIL lists the outstanding DTIP per invoice with the ageing columns of Annex III

4.4 Adjustment / Cancellation

Adjustment processes endorsement and cancellation requests on booked invoices: financial, non-financial and internal, singly or in batches. API paths of this section are under /api/v1/adjustment.

FR-OP-050 Raise an endorsement or cancellation request

BRD trace	ADJID.001 (p.89), ADJID.002 (p.89-90), ADJID.003 (p.90), ADJID.004 (p.90-91), ADJID.020 (p.98)	Actor	Marketing Collection / TL (ADJ_REQUEST); Adjustment Processor (ADJ_PROCESS)
Priority	Must have	Fit	CHANGE (ADJID.001, 003), NEW (ADJID.002, 004), FIT (ADJID.020)
Screens	New Request (wizard); Change Request; Endorsement Request page	API	POST ../requests/preview; POST ../requests; PUT ../requests/{id}; POST ../requests/{id}/submit

Description

The New Request wizard has three steps: choose one or more booked invoices (up to 50; one request ENR-yyyy-n is raised per invoice); enter the request (the form adapts to the type); review the recompute (FR-OP-054) and save or submit. The ARN, invoice, policy, client, insurer, segment and AO are copied from the ledger, so every request is linked to the original account reference.

The class comes from the endorsement type (list ENDORSEMENT_TYPE): financial (change of TSI, insured items, commission rate, premium rate or amount, extension of cover, change of cover, adjustment in charges, minimal balance), non-financial (descriptive changes, change of period cover, extension of period covered, extension of cover without premium, change of assured name or information) or internal adjustment.

A financial request needs a request type of Annex V (list ENDORSEMENT_REQUEST_TYPE): Flat Cancellation; Flat Cancellation - Retain DST; Partial Cancellation; Increase / Decrease in TSI; Increase / Decrease of Premium Rate; VAT / Premium Tax exempt; Increase / Decrease of taxes; Change of Cover; Extension of Cover; Write-off; Decrease / Increase in Commission; Cancellation Reversal. A cancellation needs a reason (Annex V, 33 values). A non-financial request carries no request type, sum insured or amount.

The invoice is locked by ADJUSTMENT while a request is open (FR-OP-006); a request that reduces the invoice raises PENDING_NEG_ADJ at submission.

Preconditions

- The user has ADJ_REQUEST or ADJ_PROCESS; the invoice is booked.

Main flow

1. The user opens **New Request** and chooses the invoices.
2. The user chooses the endorsement type, request type, reason, effective date and description, and enters the changes.
3. BIBS shows the recompute preview.

4. The user saves the draft or submits; submitted requests move to FOR_VALIDATION.

Alternate and exception flows

- The invoice is in a remittance batch (locked). BIBS refuses the request.
- A cancellation while another financial request is open on the invoice (for example a TSI change with a partial cancellation). BIBS refuses it.
- Batch upload of requests (ADJ_BATCH) raises one request per row (FR-OP-056).

Business rules

Rule	Statement	Kind	Maintained in
R1	One request per invoice; the wizard raises several at once.	Fixed	-
R2	Effective date within the cover of the invoice.	Fixed	-
R3	Change of period keeps the term; extension moves inception and expiry.	Fixed	-
R4	No request on a return invoice, a cancelled or written-off invoice.	Fixed	-
R5	Type lists as the BRD (section 9.2).	Configurable	LOV ENDORSEMENT_TYPE; ENDORSEMENT_REQUEST_TYPE; CANCELLATION_REASON

Validations and messages

Check	Message shown	Code

Additional / Other Instructions	Text	No	-	-

Notifications

- ADJ_REQUEST_STATUS to the Adjustment team when submitted.

Audit

- Create, change, submit and cancel are recorded with before and after values.

Acceptance criteria

1. A flat cancellation of a booked invoice is raised with a reason and submitted; the invoice shows PENDING_NEG_ADJ and the lock.
2. A request on an invoice in a remittance batch is refused with INVOICE_LOCKED.
3. A non-financial change of assured information is raised without amounts.
4. Choosing three invoices raises three requests.

Differences from the BRD. ADJID.001 allows "multiple accounts" in one transaction; BIBS raises one request per invoice so that each is validated, posted and traced on its own (R6 4.1). ADJID.003 / 004 say Marketing updates the account with a non-financial endorsement; booking records the non-financial endorsement with its description, and the account data are not changed until the ownership is agreed (OQ32).

FR-OP-051 Detect duplicate endorsement requests

BRD trace	ADJID.023 (p.99)	Actor	System; requester
Priority	Must have	Fit	NEW
Screens	New Request (duplicate warning)	API	POST .../requests

Description

A request is a possible duplicate when another request that is not cancelled has the same invoice, request type, reason and endorsement reference. BIBS warns and names the earlier requests; the user cancels or proceeds with a justification, which is kept on the request and in the audit trail.

Preconditions

- None.

Main flow

1. The user saves or submits a request.
2. BIBS finds a possible duplicate and refuses without a justification.
3. The user gives the justification and saves again.

Business rules

Rule	Statement	Kind	Maintained in
R1	Duplicate keys - invoice, request type, reason, endorsement reference.	Fixed	-

Validations and messages

Check	Message shown	Code
Possible duplicate	Possible duplicate of <requests> (same invoice, request type, reason and endorsement reference): give the justification to proceed	ADJ_DUPLICATE_REQUEST

Notifications

- None.

Audit

- The override justification is recorded.

Acceptance criteria

1. A second flat cancellation of the same invoice with the same reason is refused until a justification is given.

FR-OP-052 Attach supporting documents to endorsement requests

BRD trace	ADJID.025 (p.100)	Actor	Requester; Adjustment Processor
Priority	Must have	Fit	FIT
Screens	Endorsement Request page (Documents)	API	/api/v1/attachments (entity EndorsementRequest)

Description

Supporting documents are attached to the request with a document type from ENDORSEMENT_DOC_TYPE. The platform checks file type, size and integrity (checksum) and allows several files.

Preconditions

- The user has ATTACHMENT_MANAGE.

Main flow

- The user opens the Documents tab and uploads files with their type.
- BIBS stores and lists them with uploader and time.

Business rules

Rule	Statement	Kind	Maintained in
R1	The document list is blank in the BRD; only 'Other supporting document' until BDOI lists them (OQ32).	Configurable	LOV ENDORSEMENT_DOC_TYPE

Validations and messages

Check	Message shown	Code
File type or size not allowed	The file type or size is not allowed	-

Notifications

- None.

Audit

- Uploads and deletions are audited.

Acceptance criteria

- A PDF endorsement copy uploaded to a request is listed and opens from the Documents tab.

FR-OP-053 Validate, approve or return endorsement requests

BRD trace	ADJID.005 (p.91-92), ADJID.007 (p.92), ADJID.010 (p.94)	Actor	Adjustment Processor (validate, return); Adjustment TL (approve)
Priority	Must have	Fit	NEW (ADJID.005, 010), CHANGE (ADJID.007)
Screens	Adjustment Workbench (tabs per stage); Endorsement Request page (workflow panel); Posting Batches	API	POST ../requests/{id}/validate, /approve, /resubmit; POST ../batches/return

Description

Requests follow workflow OPS_ENDORSEMENT (section 5). The processor validates a submitted request for approval or, when it has no financial effect, directly for posting. The TL approves it. Extension of cover with additional premium (FIN_EXTENSION) always needs approval.

A request can be returned from validation, approval or the posting batch with a reason from ADJ_RETURN_REASON; returned requests are excluded from posting, flagged and the requester is notified. Posted requests cannot be returned. The requester corrects and resubmits, or cancels.

Preconditions

- The request is in the stage of the action; the user has its permission.

Main flow

- The processor opens the request FOR_VALIDATION and checks it.
- The processor clicks **Validate for approval** (or **Validate for posting**).
- The TL clicks **Approve**; the request moves to FOR_POSTING.

Alternate and exception flows

- Return with a reason; the requester is notified (RETURNED).
- Several requests are returned from Posting Batches in one action, each with its reason.

Business rules

Rule	Statement	Kind	Maintained in
R1	The approver never raised, submitted or validated the request.	Fixed	-
R2	Return reasons from the list.	Configurable	LOV ADJ_RETURN_REASON

Validations and messages

Check	Message shown	Code
Approver involved earlier	A request is approved by someone who did not raise or validate it	ADJ_FOUR_EYES
Return without reason	Select the return reason	ADJ_RETURN_REASON_REQUIRED
Action in the wrong stage	<request> is <stage>, not <expected>	ADJ_WRONG_STAGE

Screens and fields: Return request

Field	Type	Mand.	Source / LOV	Validation
Reason	List	Yes	LOV ADJ_RETURN_REASON	-
Comment	Text	Cond.	-	Required for Others

Notifications

- ADJ_REQUEST_STATUS to the team of the next stage, and to the requester on return, posting and cancellation.

Audit

- Each transition is in the request history with reason and comment.

Acceptance criteria

1. The processor who validated a request cannot approve it.
2. An extension of cover with additional premium cannot skip the approval.
3. A request returned from the posting batch is not posted and the requester sees the reason.

FR-OP-054 Recompute premium, commission and refund per insurer (addendum)

BRD trace	ADJID.014 (p.95-96 and addendum p.5)	Actor	System
Priority	Must have	Fit	CHANGE
Screens	New Request (Recompute step); Endorsement Request page (Recompute)	API	POST ../requests/preview; GET ../requests/{id}/recompute

Description

BIBS recomputes the premium, commission, refund premium and sum insured by request type. Cancellations use booking's own posting preview, so the preview equals the posting. A TSI change is rated once per insurer share with the catalogue calculator in endorsement mode (remaining term pro-rata or short-period, each insurer at its commission rate, the lead with its branch LGT). Other types take the entered component changes (commission derived from the invoice rate when blank).

The before and after values per component and the change per insurer are stored on the request at every save, submission, validation and posting, so the original values are never overwritten.

When the change affects BDOI income or commission, posting issues a service invoice, or credits the insurer's service invoice for a decrease, through booking (addendum).

Preconditions

- The request has its type and changes.

Main flow

1. The user enters the request.
2. BIBS shows the before / after table and the breakdown per insurer with the service invoice, payment and remittance effects.
3. BIBS stores the result on the request.

Alternate and exception flows

- An insurer has no commission configuration. The recompute says which insurer is missing.

Business rules

Rule	Statement	Kind	Maintained in
R1	Refund basis pro-rata or short-period, chosen per request (OQ36).	Configurable	Request field
R2	Service invoice on an income or commission change; credit of the insurer's service invoice on a decrease (OQ34).	Fixed	-

Notifications

- None.

Audit

- Before / after per component and the insurer breakdown are kept for every stage.

Acceptance criteria

1. A decrease in TSI of a 60/40 co-insured invoice shows the premium and commission change per insurer.
2. A commission increase without premium change issues a service invoice at posting.
3. The recompute of a flat cancellation equals the amounts posted by booking.

FR-OP-055 Handle a TSI increase above the package limit

BRD trace	ADJID.008 (p.92-93)	Actor	System; Marketing AO (quotation)
Priority	Must have	Fit	NEW
Screens	New Request; Endorsement Request page (Quotation No.)	API	POST ../requests/{id}/quotation

Description

A TSI increase is checked against the package TSI limit of the product in the catalogue. When the increase takes the account above the limit, submission opens a hand-off QUOTATION_REQUIRED for Marketing (QUOTE_MAINTAIN) to prepare a quotation, and validation waits until the quotation number is linked on the request. The added insurer and the co-insurance shares follow the quotation; non-package shares are recomputed on the endorsed sum insured and remaining period (FR-OP-054).

Preconditions

- The request is a TSI increase.

Main flow

1. The user submits the TSI increase.
2. BIBS finds the limit exceeded and opens the hand-off to Marketing.
3. Marketing prepares the quotation; the user enters the **Quotation No.** on the request.
4. The processor validates the request.

Business rules

Rule	Statement	Kind	Maintained in
R1	Limit from the catalogue product (max_sum_insured); insurer capacity per product to be confirmed (OQ33).	Configurable	Catalogue

Validations and messages

Check	Message shown	Code
Validation before the quotation	The TSI increase exceeds the package limit: link the quotation prepared by Marketing first (ADJID.008)	ADJ_QUOTATION_REQUIRED
Link without number	Enter the quotation number	ADJ_QUOTATION_REF_REQUIRED
Link on a request that needs none	<request> needs no quotation link	ADJ_QUOTATION_NOT_REQUIRED

Notifications

- The hand-off appears to Marketing on Hand-offs and Extracts.

Audit

- The linked quotation number is recorded.

Acceptance criteria

1. A TSI increase above the package limit cannot be validated before the quotation number is linked.
2. A TSI increase within the limit needs no quotation.

Difference from the BRD. ADJID.008 asks to prompt the AO to prepare a quotation. The quotation module has no endorsement quotation call, so BIBS opens a hand-off and links the quotation by its number.

FR-OP-056 Post requests singly or in batches

BRD trace	ADJID.006 (p.92), ADJID.011 (p.94)	Actor	Adjustment Processor (ADJ_POST)
Priority	Must have	Fit	CHANGE
Screens	Posting Batches; Batch Request Upload; Endorsement Request page (Accounting)	API	POST .../batches; GET .../batches; GET .../batches/{no}; POST .../requests/{id}/post; GET .../requests/{id}/journal; bulk ADJ_BATCH

Description

The processor selects requests FOR_POSTING and posts them as a validation batch VB-yyyy-n; each request is posted in its own transaction and a failure does not stop the others. The batch result shows posted, payments to re-apply and failed requests. Requests can also be uploaded in a batch file (ADJ_BATCH); re-uploading the same request number does not create duplicates.

Posting: financial endorsements and cancellations are posted through booking's endorsement posting with source ADJ:<request> (endorsement invoice EN-yyyy-n or return invoice, journal and open items; the default entries per type are Comptrollership rules); non-financial endorsements are recorded by booking without GL; internal requests without financial effect post nothing. A decrease or cancellation records ADJUSTED movements on the original invoice; cancellations set the CANCELLED flag.

Preconditions

- The requests are FOR_POSTING.

Main flow

1. The processor opens Posting Batches, selects requests and clicks **Post selected**.
2. BIBS posts each request and shows the batch result.
3. The Accounting tab of each request shows its journal.

Alternate and exception flows

- A request fails. It stays FOR_POSTING with the message; the others are posted.
- Return selected requests before posting (FR-OP-053).

Business rules

Rule	Statement	Kind	Maintained in
R1	GL entries per endorsement type are Comptrollership rules (OQ07).	Configurable	Accounting rules
R2	Posting is idempotent on the request.	Fixed	-

Validations and messages

Check	Message shown	Code
Nothing selected	Select the requests to post	ADJ_BATCH_EMPTY
Posting failed	<message of the failed request>	ADJ_POSTING_FAILED

Notifications

- ADJ_REQUEST_STATUS to the requester on posting.

Audit

- The batch, each request result and the journal references are kept.

Acceptance criteria

1. A batch of three requests posts all three; a fourth with a locked invoice fails without stopping the others.
2. The Validation List (FR-OP-062) shows the GL lines of the posted requests.

FR-OP-057 Set up excess payments, re-apply payments and AR Insurer

BRD trace	ADJID.009 (p.93-94), ADJID.012 (p.94-95), ADJID.013 (p.95)	Actor	System; Adjustment Processor
Priority	Must have	Fit	NEW
Screens	Endorsement Request page; Adjustment Workbench (Payments to Re-apply); Unapplied Payments	API	POST ../requests/{id}/post, /reapply

Description

After a decrease or cancellation of a paid invoice, BIBS releases the lock and asks Cashiering to re-apply the payments against the reduced premium. Cashiering reverses the applications above the new premium and applies the money again in hierarchy order; the excess becomes one unapplied item (origin REAPPLY) for disposition by Marketing and Cashiering (apply to another invoice or refund, FR-OP-022). Realised commission is reversed with the applications.

When the invoice was already remitted and its DTIP becomes negative, BIBS sets up the amount (at most the remitted DTIP) as AR Insurer per insurer share (OPS_AR_INSURER_SETUP) and keeps PENDING_NEG_ADJ so that Remittance offsets or excludes the invoice.

When Cashiering is not available the request moves to AWAITING_REAPPLICATION ("Payments to Re-apply") and **Re-apply Payments** retries later.

Preconditions

- A decrease or cancellation is posted on a paid or remitted invoice.

Main flow

1. BIBS posts the request (FR-OP-056).
2. BIBS calls Cashiering to re-apply the payments of the invoice.
3. BIBS records the excess and its unapplied item on the request.
4. For a remitted invoice, BIBS sets up the AR Insurer.

Alternate and exception flows

- Re-application unavailable. The request waits in AWAITING_REAPPLICATION.

Business rules

Rule	Statement	Kind	Maintained in
R1	Re-application is idempotent per request and invoice.	Fixed	-
R2	AR Insurer never exceeds the DTIP remitted.	Fixed	-

Validations and messages

Check	Message shown	Code
Re-application unavailable	Payments can only be re-applied once Cashiering is available; the request stays awaiting re-application	PAYMENT_REAPPLIER_UNAVAILABLE

Notifications

- The unapplied item appears in the Unapplied Payments workbench.

Audit

- The excess, unapplied reference and AR Insurer journal are kept on the request.

Acceptance criteria

- Cancelling a fully paid, not remitted invoice of 10,000.00 creates an unapplied item of 10,000.00.
- Cancelling a remitted invoice sets up AR Insurer equal to the remitted DTIP and keeps PENDING_NEG_ADJ.

FR-OP-058 Control over-adjustment

BRD trace	ADJID.028 (p.103)	Actor	System; requester
Priority	Not stated in the BRD	Fit	NEW
Screens	New Request (baseline justification); Invoice 360 (adjustment totals)	API	POST ../requests/{id}/submit

Description

BIBS keeps the cumulative adjustments of each original invoice against its original premium, DTIP and commission. When a request would take the cumulative adjustments above the baseline percent of the original premium, or below zero, submission needs a justification and raises the alert ADJ_OVER_BASELINE. Previous adjustments are shown before the request is submitted; duplicates are blocked by FR-OP-051.

Preconditions

- None.

Main flow

- The user submits a request.
- BIBS adds the request to the cumulative adjustments and compares with the baseline.
- Above the baseline, BIBS asks for the justification and raises the alert.

Business rules

Rule	Statement	Kind	Maintained in
R1	Baseline 100% of the original premium (default, OQ37).	Configurable	Parameter ADJ_BASELINE_PERCENT

Validations and messages

Check	Message shown	Code
Above the baseline without justification	Cumulative adjustments of <amount> exceed the baseline of <n>% of the original premium <amount>	ADJ_OVER_BASELINE

Notifications

- ADJ_OVER_BASELINE alert to the Adjustment TL.

Audit

- The justification and the cumulative totals are recorded.

Acceptance criteria

1. A second premium increase that takes the adjustments above 100% of the original premium needs a justification.
2. A decrease that would make the premium negative is refused without justification.

FR-OP-059 Write off minimal balances from a file

BRD trace	ADJID.026 (p.101-102)	Actor	Adjustment Processor (ADJ_POST)
Priority	Must have	Fit	NEW
Screens	Minimal Balance File; Report ADJ-MINBAL-FILE	API	bulk MINIMAL_BALANCE_FILE; GET .../write-offs

Description

The processor uploads a file of invoices with minimal balances (columns Invoice No and Balance). A row is processed when the invoice exists, its PR balance equals the file, lies within 10.00-100.00, was not written off and no other module locks it. A debit balance is written off and a credit balance credited (outcomes WRITE_OFF / CREDIT) with the event OPS_WRITE_OFF, a WRITE_OFF movement and the WRITTEN_OFF flag, once per invoice. The run lists the rows not processed with their reason; ADJ-MINBAL-FILE summarises the file.

Preconditions

- The user has ADJ_POST.

Main flow

1. The processor uploads the file.
2. BIBS checks each row and writes off or credits the balance.
3. BIBS shows the run summary and the written-off list.

Alternate and exception flows

- Duplicate file. Refused (BULK_DUPLICATE_FILE).

Business rules

Rule	Statement	Kind	Maintained in
R1	Range 10.00-100.00 (OQ11).	Configurable	Parameter MIN_BALANCE_FILE_RANGE
R2	An invoice is written off once.	Fixed	-

Validations and messages

Check	Message shown	Code
Balance outside range	<invoice> has a balance of <amount>, outside the file range	ADJ_BALANCE_OUT_OF_RANGE
No PR balance	<invoice> has no premium receivable balance	ADJ_NOTHING_TO_WRITE_OFF
Invoice locked	Invoice <no> is locked by <owner>	INVOICE_LOCKED

Notifications

- None.

Audit

- Each processed invoice is recorded once with the file.

Acceptance criteria

1. A balance of 50.00 in the file is written off and Remittance then refuses the invoice as WRITTEN_OFF.
2. A balance of 150.00 is refused with ADJ_BALANCE_OUT_OF_RANGE.

FR-OP-060 Generate the endorsement slip and the validation slip

BRD trace	ADJID.015 (p.96), ADJID.018 (p.97-98)	Actor	Marketing; Adjustment Processor
Priority	Must have	Fit	NEW
Screens	Endorsement Request page (Endorsement Slip, Validation Slip)	API	GET .../requests/{id}/endorsement-slip; GET .../requests/{id}/validation-slip

Description

The endorsement slip (template ENDORSEMENT_SLIP) is a PDF with the Annex V fields: date, insurer and co-insurers, endorsement request number, invoice number, request type, reason for cancellation, effective date, additional instructions, assured, risk code and description, policy number, period of cover, Marketing AO, market segment, total sum insured and its change, premium rate, payment status (outstanding, fully or partially paid with amount, date and remaining AR), remittance status, approved by. It is numbered once ES-yyyy-n and is not produced for internal adjustments.

The validation slip (template VALIDATION_SLIP) summarises a validated request with the validation status, before / after, insurer breakdown and GL entries; it is not produced before validation.

Preconditions

- Endorsement slip - the request is external (not internal). Validation slip - the request passed validation.

Main flow

1. The user opens the request and clicks **Endorsement Slip** or **Validation Slip**.
2. BIBS generates the PDF for download or print.

Business rules

Rule	Statement	Kind	Maintained in
R1	Slip number assigned once and kept.	Fixed	-

Validations and messages

Check	Message shown	Code
Slip for an internal adjustment	Internal adjustments have no endorsement slip (ADJID.015)	ADJ_NO_SLIP_FOR_INTERNAL
Validation slip before validation	<request> has not passed validation yet	ADJ_NOT_VALIDATED

Notifications

- None.

Audit

- Slip generation is recorded with its number.

Acceptance criteria

1. The endorsement slip of a flat cancellation shows the Annex V fields and a number ES-2026-n; regenerating it keeps the number.
2. An internal adjustment has no endorsement slip.

FR-OP-061 Search requests, view history and ageing

BRD trace	ADJID.021 (p.98-99), ADJID.022 (p.99), ADJID.024 (p.100)	Actor	Adjustment users; Marketing
Priority	Must have	Fit	CHANGE
Screens	Adjustment Workbench; Endorsement Request page (History); Invoice Search and Invoice 360 (Adjustments)	API	GET ../requests; GET ../requests/{id}; GET ../invoices/{no}/requests; GET /api/v1/ops/invoices/{no}

Description

The Adjustment Workbench lists requests by stage tab with counts, searches by request, invoice, ARN, policy or assured, and shows the ageing of each request from submission (or creation) to completion in Philippine days, with the flags.

The request page keeps the complete history with the old and new details, status and remarks. From an ARN the user opens Invoice 360 with the payment and remittance history and the requests of the invoice (auto-complete on ARN).

Preconditions

- The user has an ADJ_* permission or OPS_VIEW.

Main flow

1. The user searches or opens a stage tab.
2. The user opens a request and its History tab.

Notifications

- None.

Audit

- None (read only).

Acceptance criteria

1. A request submitted 3 days ago shows ageing 3 in the workbench.
2. The History tab shows the before and after values of each change.
3. Searching an ARN lists its requests and opens Invoice 360.

FR-OP-062 Generate the Adjustment reports

BRD trace	ADJID.016 (p.96), ADJID.017 (p.97), ADJID.019 (p.98)	Actor	Adjustment users; Comptrollership
Priority	Must have	Fit	NEW
Screens	Reports (category Operations)	API	/api/v1/reports (ADJ-*); job ADJ_DAILY_REPORT

Description

ADJ-DAILY: Adjustment and Daily Endorsement Report of the requests raised or posted in the period, by type and user. The job ADJ_DAILY_REPORT (18:00 PHT) exports it as Excel for the business date, archives it and notifies the holders of ADJ_APPROVE.

ADJ-VALIDATION-LIST: posted requests with one row per GL line - type of cancellation / adjustment, invoice, endorsement reference and request number, segment, requesting AO, policy, assured, insurer, GL code, debit / credit, reason, validation date, validation batch number.

ADJ-REGISTER: Adjustment Report filtered by date, account, segment, AO and risk type. ADJ-AGING: ageing with buckets (ADJID.021).

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

1. The user chooses the report and parameters and generates it.

Business rules

Rule	Statement	Kind	Maintained in
R1	Layouts not given by the BRD are drafts (OQ42).	Configurable	Report layouts

Notifications

- The daily report notification to the Adjustment TL.

Audit

- Runs are archived.

Acceptance criteria

1. The Validation List of a day matches the journals of the requests posted that day.
2. The daily report is archived every business day at 18:00.

4.5 Production Reconciliation

Production Reconciliation sends each insurer a register of the accounts BDOI booked with it, takes in the insurer's answer, matches both sides and follows every difference to closure. The work is organised in cycles: one open cycle per insurer and production month (workflow OPS_RECON, section 5). API paths of this section are under /api/v1/prodrecon.

FR-OP-070 Schedule the automatic extraction of the production register

BRD trace	PRCID.001 (p.79)	Actor	Recon Handler (schedules); System (job PRODUCTION_EXTRACT)
Priority	Must have	Fit	CHANGE
Screens	Extract Schedules	API	GET / POST .../schedules; PUT .../schedules/{id}

Description

Each insurer has a schedule with its frequency (monthly on a day of the month, or weekly on a weekday), whether the register is sent automatically, and the recipients. The job PRODUCTION_EXTRACT (daily 09:00 PHT) extracts the booked accounts of every insurer due that day. A run date that falls on a holiday moves to the next working day of the head office calendar.

Preconditions

- The user has RECON_PROCESS to maintain schedules.

Main flow

- The handler adds a schedule for an insurer.
- On the run date the job extracts the register and opens or updates the cycle of the month.
- When automatic sending is on, the register is sent (FR-OP-073).

Business rules

Rule	Statement	Kind	Maintained in
R1	Frequency per insurer (values from BDOI, OQ29).	Configurable	Extract Schedules
R2	Holidays roll to the next working day.	Fixed	-

Validations and messages

Check	Message shown	Code
No company or insurer	Choose the company and the insurer of the schedule	RECON_SCHEDULE_INSURER

Screens and fields: Extract Schedule

Field	Type	Mand.	Source / LOV	Validation
Insurer Code	Look-up	Yes	Insurer master	-
Frequency	List	Yes	Monthly / Weekly	-
Run Day	Number	Yes	-	Day of month 1-28 or weekday
Recipients	Text	No	-	E-mail addresses; blank = insurer's e-mail

Notifications

- None.

Audit

- Schedule changes are audited.

Acceptance criteria

1. A monthly schedule on day 5 extracts on 5 October; when 5 October is a holiday it extracts on the next working day.

FR-OP-071 Extract the production register manually and view it

BRD trace	PRCID.005 (p.80), PRCID.011 (p.81), PRCID.012 (p.82), PRCID.013 (p.82), PRCID.020 (p.83), PRCID.034 (p.86)	Actor	Recon Handler
Priority	Must have	Fit	NEW
Screens	Production Extracts (New Extract); Reconciliation Cycle (Registers Sent); Report PRC-EXTRACT-LOG	API	POST / GET .../extracts; GET .../extracts/{id}/lines; GET .../extracts/{id}/file; GET .../cycles/{id}/extracts

Description

The handler extracts the register of an insurer for a booking period (PRX-yyyy-n). Each line records the ledger facts of the booked account, the last payment and the estimated flag; an account not on an earlier register of the cycle counts as new. The extract shows its file name, location in the extract repository (folder PRODRECON/<insurer>), date and time, creator and row count.

Extracts and uploaded insurer lines are viewed per cycle, filtered by production month and insurer. PRC-EXTRACT-LOG reports the item count and extraction time of each extract.

Preconditions

- The user has RECON_PROCESS.

Main flow

1. The handler clicks **New Extract** and enters the insurer and booking period (or production month).
2. BIBS extracts the booked accounts of the period and stores the file.
3. The handler opens the extract lines or downloads the file.

Business rules

Rule	Statement	Kind	Maintained in
R1	Only accounts booked in the selected period are extracted.	Fixed	-

Validations and messages

Check	Message shown	Code
Period end before start	The booking period ends before it starts	RECON_EXTRACT_PERIOD
Nothing booked	No invoice was booked with <insurer> from <from> to <to>	RECON_NOTHING_TO_EXTRACT

Screens and fields: New Extract

Field	Type	Mand.	Source / LOV	Validation
Insurer Code	Look-up	Yes	Insurer master	-
Production Month or booking period	Month / Dates	Yes	-	From <= To

Notifications

- None.

Audit

- Each extract is kept with its file, creator, time and count.

Acceptance criteria

1. A manual extract of INS-MGIC for September lists only accounts booked in September.
2. The extract shows its file name, date, time and row count, and PRC-EXTRACT-LOG shows the same count.

FR-OP-072 Produce the register file in the agreed layout

BRD trace	PRCID.002 (p.79), PRCID.004 (p.79-80), PRCID.006 (p.80), PRCID.007 (p.80)	Actor	System
Priority	Must have	Fit	CHANGE (PRCID.002), CONFIGURE (PRCID.004, 006), FIT (PRCID.007)
Screens	Production Extracts (download)	API	GET ../extracts/{id}/file

Description

The register is an XLSX workbook in the Production Register layout of Annex IV #5: month of production, insurer, invoice number, booking, inception and expiry dates, policy number, endorsement number, PN number, assured name, insurance code, risk type, basic premium, gross commission, A/R client, gross premium, booked VAT, amount paid, date paid, OR number, adjustment type, remittance status.

The sheet is protected; only the Remarks and Incentive columns and 200 blank rows are editable by the insurer. The file is named by the naming pattern and protected by a password when it is e-mailed (FR-OP-073).

Preconditions

- An extract exists.

Main flow

1. BIBS builds the workbook from the extract lines.
2. BIBS names it and stores it in the extract repository.

Business rules

Rule	Statement	Kind	Maintained in
R1	File name pattern, default <INSURER>_PRODREG_<yyyyMM>_<seq>.	Configurable	Parameter PRODRECON_FILE_PATTERN
R2	Template per insurer when needed (OQ29).	Configurable	Document templates

Rule	Statement	Kind	Maintained in
R3	Password convention to be confirmed (BRD-1 Q07); a password per e-mail until then.	Configurable	Messaging settings

Notifications

- None.

Audit

- The file and its name are kept with the extract.

Acceptance criteria

1. In the downloaded register every column except Remarks and Incentive is locked.
2. Two extracts of the same insurer and month get different file names.

Differences from the BRD. PRCID.002 keeps only the insurer's Remarks column editable. BIBS also leaves the Incentive column and 200 blank rows editable, so that the insurer can report its early incentives and add production that BDOI did not book (PRCID.022). The Sum Insured column of Annex IV #5 is left out: the invoice ledger does not hold the sum insured.

FR-OP-073 Send the register to the insurer with a cover letter

BRD trace	PRCID.003 (p.79), PRCID.008 (p.81)	Actor	Recon Handler (RECON_SEND)
Priority	Must have	Fit	CONFIGURE (PRCID.003), FIT (PRCID.008)
Screens	Production Extracts (Send); Reconciliation Cycle (workflow panel)	API	POST .../extracts/{id}/send

Description

The handler sends the register by e-mail with the cover letter template PRODRECON_COVER_LETTER (insurer name, extract number, booking period, production month, row count, instructions to return the remarks). The attachment is password protected and the password is sent in a separate e-mail. When no recipient is given, the insurer's placement e-mail from the catalogue is used. BIBS stores the sent time and recipients on the extract and moves the cycle to SENT_TO_INSURER.

Preconditions

- The user has RECON_SEND; the cycle is EXTRACTED, SENT_TO_INSURER or RECONCILING.

Main flow

1. The handler clicks **Send to Insurer** and confirms the recipients.
2. BIBS e-mails the protected register and the password.
3. BIBS records the sent time and moves the cycle.

Alternate and exception flows

- Resend. The handler resends a register; the new sent time is recorded.

Business rules

Rule	Statement	Kind	Maintained in
R1	Cover letter text is a template (texts from BDOI, OQ29).	Configurable	Document template PRODRECON_COVER_LETTER

Validations and messages

Check	Message shown	Code
No recipient	Enter the insurer's e-mail address: <insurer> has no placement e-mail in the catalog	RECON_NO_RECIPIENT

Screens and fields: Send to Insurer

Field	Type	Mand.	Source / LOV	Validation
To	Text	Yes	Insurer e-mail	Valid e-mail
Cc	Text	No	-	Valid e-mail

Notifications

- E-mails to the insurer; the send log keeps them.

Audit

- Sent time and recipients are stored on the extract.

Acceptance criteria

- The insurer receives the register as a protected file and the password in a second e-mail.
- The extract shows the sent date and time.

FR-OP-074 Upload the insurer production report

BRD trace	PRCID.009 (p.81), PRCID.010 (p.81), PRCID.022 (p.83-84), PRCID.031 (p.85-86), PRCID.032 (p.86)	Actor	Recon Handler
Priority	Must have	Fit	CHANGE (PRCID.009, 010, 032), NEW (PRCID.022), FIT (PRCID.031)
Screens	Insurer Feedback (upload, attempts); Interfaces (feed INSURER_PRODUCTION)	API	POST / GET .../uploads; feed INSURER_PRODUCTION

Description

The handler uploads the insurer's production report or matched file (the returned register). BIBS validates the layout and each row and matches the file at once (FR-OP-075). Lines of accounts that were not in the original extract are kept apart as insurer-only lines (unbooked, FR-OP-076).

A file with the same content as an earlier upload is refused (DUPLICATE_BLOCKED) and raises RECON_UPLOAD_DUPLICATE. Every attempt is recorded with its number, user, time, row counts and status (successful / unsuccessful).

Preconditions

- The user has RECON_PROCESS.

Main flow

- The handler uploads the file on Insurer Feedback.
- BIBS checks for a duplicate, reads the rows and matches them in the cycle of the insurer and month.
- BIBS shows the attempt with its status and counts; the cycle moves to RECONCILING.

Alternate and exception flows

- Duplicate file. Refused; the attempt is recorded.

- Layout wrong. Refused with the missing column.

Business rules

Rule	Statement	Kind	Maintained in
R1	Upload by the handler; automatic pick-up from mailbox or SFTP is parked (InsurerFileInbox).	Fixed	-
R2	Duplicate by file content (SHA-256).	Fixed	-

Validations and messages

Check	Message shown	Code
Duplicate file	Upload refused: <earlier upload>	RECON_UPLOAD_DUPLICATE
Column missing	The file is not in the production register layout: column '<column>' missing	RECON_FILE_LAYOUT
Row without keys	Row <n> has neither invoice nor policy number	RECON_ROW_INCOMPLETE
Row without insurer or month	Row <n> has no insurer or production month (yyyy-MM)	RECON_ROW_INCOMPLETE
Bad amount	Row <n>: <column> '<value>' is not an amount	RECON_ROW_AMOUNT
Bad date	Row <n>: <column> '<value>' is not a date	RECON_ROW_DATE
Unknown company	Upload the production of <insurer> from Production Reconciliation - Uploads (company not known)	RECON_COMPANY_UNKNOWN

Notifications

- RECON_FEEDBACK_UPLOADED to the handlers.

Audit

- Each attempt is kept with its flow-in run and records.

Acceptance criteria

1. Uploading the returned register matches it and lists the insurer-only lines separately.
2. Uploading the same file again is refused and counted as a new attempt.

Difference from the BRD. PRCID.009 asks to receive and upload the insurer report automatically. Insurer channels are not specified (OQ29); the handler uploads the file, and the InsurerFileInbox seam takes a mailbox or SFTP later without a change to the matching.

FR-OP-075 Match booked and insurer lines within tolerance

BRD trace	PRCID.024 (p.84), PRCID.025 (p.84), PRCID.026 (p.84), PRCID.027 (p.84-85), PRCID.030 (p.85)	Actor	System; Recon Handler (re-match)
Priority	Must have	Fit	NEW
Screens	Reconciliation Cycle (Items by bucket, side-by-side comparison)	API	POST .../cycles/{id}/automatch; GET .../cycles/{id}/items; GET .../settings; job RECON_AUTOMATCH

Description

BIBS pairs each insurer line with a booked line using the keys of RECON_MATCH_KEYS in order (default invoice number, then policy number). It then compares the fields: policy, reference / invoice and PN numbers and the policy period must be equal; the assured name is compared ignoring case and spacing; commission, basic premium and gross premium match when they differ by 1.00 or less, whichever side is higher.

Status of each item: MATCHED; MATCHED_WITH_DISCREPANCY (the differing fields are listed); BDOI_ONLY (booked, not returned by the insurer); UNMATCHED_PREBOOKED; UNMATCHED_NO_BOOKING. Each status is a bucket tab with its count; a discrepancy row expands to a side-by-side comparison with the tolerance highlighted.

Matching runs on every upload, when a later invoice is booked (waiting insurer-only lines of the same insurer), and by **Match Again** or the job RECON_AUTOMATCH for every open cycle.

Preconditions

- A cycle has extract lines and insurer lines.

Main flow

- BIBS pairs the lines by key.
- BIBS compares the fields and tags each item.
- The handler reviews the buckets.

Business rules

Rule	Statement	Kind	Maintained in
R1	Tolerance 1.00 per amount field.	Configurable	Parameter RECON_TOLERANCE
R2	Match keys and order.	Configurable	Parameter RECON_MATCH_KEYS (OQ30)
R3	Automatch schedule manual until BDOI gives the frequency.	Configurable	Job RECON_AUTOMATCH (OQ30)

Validations and messages

Check	Message shown	Code
Action on a closed cycle	Cycle <no> is closed	RECON_CYCLE_CLOSED

Notifications

- None.

Audit

- Each item keeps its match method (AUTO or MANUAL), status history and differences.

Acceptance criteria

- A gross premium difference of 0.80 is MATCHED; a difference of 1.20 is MATCHED_WITH_DISCREPANCY listing gross premium.
- An account the insurer did not return is BDOI_ONLY.
- Booking the invoice of a waiting insurer-only line matches it automatically.

Difference from the BRD. PRCID.030 names four statuses. BIBS adds BDOI_ONLY for booked accounts the insurer did not return, so that they can be followed like the other differences.

FR-OP-076 Follow unbooked and pre-booked insurer production

BRD trace	PRCID.019 (p.83), PRCID.023 (p.84), PRCID.033 (p.86)	Actor	System; Recon Handler
Priority	Must have	Fit	NEW
Screens	Unbooked Accounts; Report PRC-UNBOOKED	API	GET .../unbooked

Description

For each insurer-only line BIBS searches New Business for a pre-booked account (ARN) with the same reference. The line becomes UNMATCHED_PREBOOKED when one is found and UNMATCHED_NO_BOOKING otherwise. The Unbooked Accounts repository lists the unmatched and duplicate lines with their unbooked status (OPEN, PREBOOKED, BOOKED, CLOSED), feedback and disposition, and is searchable and filterable. PRC-UNBOOKED lists the unbooked accounts and their status.

Preconditions

- None.

Main flow

1. An insurer upload creates insurer-only lines.
2. BIBS looks up pre-booked accounts and tags each line.
3. When the account is booked, BIBS matches it (FR-OP-075) and the unbooked status becomes BOOKED.

Notifications

- None.

Audit

- Status changes are kept per item.

Acceptance criteria

1. An insurer policy whose ARN is pre-booked shows UNMATCHED_PREBOOKED with the ARN.
2. After booking, the line leaves the open list and shows BOOKED.

FR-OP-077 Review items, record feedback and pair manually

BRD trace	PRCID.014 (p.82), PRCID.015 (p.82), PRCID.016 (p.82), PRCID.021 (p.83)	Actor	Recon Handler
Priority	Must have	Fit	NEW (PRCID.014, 015, 021), CONFIGURE (PRCID.016)
Screens	Reconciliation Cycle (Items, filters, review dialog, bulk disposition)	API	GET .../cycles/{id}/items; PUT .../items/{id}/feedback; POST .../items/feedback; POST .../items/{id}/pair, /split

Description

The items filter by status bucket, text, AO / AB, sales unit, market segment and product line (booked and pre-booked). The handler records on an item the company concerned (list with Others), an instruction or notation, the insurer feedback, the Marketing feedback, the disposition and the for-closure mark, singly or in bulk.

A BDOI-only item can be paired manually with an insurer-only item of the same cycle, and a wrong pairing can be split back into its two sides.

Preconditions

- The user has RECON_PROCESS; the cycle is not closed.

Main flow

- The handler filters the items.
- The handler opens an item and records the feedback and disposition.
- BIBS saves them with user and time.

Alternate and exception flows

- Bulk. The handler selects items and sets the disposition for all.
- Manual pair or split.

Business rules

Rule	Statement	Kind	Maintained in
R1	Company-concerned and disposition lists (values from BDOI, OQ31; demo values delivered).	Configurable	LOV RECON_COMPANY_CONCERNED; LOV RECON_DISPOSITION

Validations and messages

Check	Message shown	Code
Pair across cycles or wrong sides	Pair a BDOI-only item with an insurer-only item of the same cycle	RECON_PAIR_INVALID
Split of an unpaired item	Only a paired item can be split	RECON_SPLIT_INVALID

Screens and fields: Item review

Field	Type	Mand.	Source / LOV	Validation
Company Concerned	List	No	LOV RECON_COMPANY_CONCERNED	Others needs the instruction
Instruction	Text	No	-	-
Insurer Feedback	Text	No	-	-
Marketing Feedback	Text	No	-	-
Disposition	List	No	LOV RECON_DISPOSITION	-
For closure	Check box	No	-	Insurer confirmed closure

Notifications

- None.

Audit

- Feedback changes are audited with before and after values.

Acceptance criteria

- Filtering by AO lists only that AO's items.
- The disposition set in bulk on five items appears on each item and on PRC-DISPOSITION.

Difference from the BRD. PRCID.021 asks to filter by BDOI location. The items filter by AO, sales unit, segment and product line; the location is available on the report PRC-UNMATCHED-LOC.

FR-OP-078 Validate early remittance incentives claimed by insurers

BRD trace	PRCID.028 (p.85)	Actor	Recon Handler
Priority	Must have	Fit	NEW
Screens	Reconciliation Cycle (Early Incentive); Report PRC-EARLY-INCENTIVE	API	GET .../cycles/{id}/early-incentive

Description

For each booked account of the cycle, BIBS checks the remittance date against the insurer's incentive rate and window kept by Remittance (FR-OP-038). The account is ELIGIBLE when remitted within the window (30 days from inception for CLG / CBG motor and fire at 2% in the BRD example), NOT_ELIGIBLE when remitted late, and NO_RULE when no rule covers it.

Preconditions

- The cycle has booked accounts.

Main flow

- The handler opens the Early Incentive tab.
- BIBS lists each account with rule, rate, window, remittance date and result.

Business rules

Rule	Statement	Kind	Maintained in
R1	Rates and windows come from the Remittance incentive rules (OQ23).	Configurable	Incentive Rules

Notifications

- None.

Audit

- None (read only).

Acceptance criteria

- An account remitted 20 days after inception under a 30-day rule is ELIGIBLE at the rule's rate.
- An account of an insurer without rule is NO_RULE.

FR-OP-079 Close a cycle and view its history

BRD trace	PRCID.029 (p.85)	Actor	Recon Handler
Priority	Must have	Fit	FIT
Screens	Reconciliation Cycles; Reconciliation Cycle (workflow panel, History)	API	GET .../cycles; GET .../cycles/{id}; POST .../cycles/{id}/close

Description

The cycle keeps its counts per bucket and its history (timestamps, actions, users). It closes by itself (for_closure) when every item is matched or marked for closure; otherwise the handler closes it with a comment.

Preconditions

- The cycle is RECONCILING.

Main flow

- The handler resolves the items.
- BIBS closes the cycle when all items are matched or for closure, or the handler clicks **Close Cycle**.

Business rules

Rule	Statement	Kind	Maintained in
R1	One open cycle per insurer and production month.	Fixed	-

Validations and messages

Check	Message shown	Code
Action on a closed cycle	Cycle <no> is closed	RECON_CYCLE_CLOSED

Notifications

- None.

Audit

- The History tab shows the workflow history and the audit trail.

Acceptance criteria

- Marking the last open item for closure closes the cycle.
- The History tab lists the extract, send, upload and closure with users and times.

FR-OP-080 Generate the Production Reconciliation reports

BRD trace	PRCID.017 (p.82-83), PRCID.018 (p.83), PRCID.035 (p.86), PRCID.036 (p.86-87), PRCID.037 (p.87), PRCID.038 (p.87), PRCID.039 (p.87)	Actor	Recon Handler; TL / TH
Priority	Must have	Fit	NEW
Screens	Reports (category Operations)	API	/api/v1/reports (PRC-*)

Description

BIBS provides PRC-REGISTER (variants: plain, with insurer feedback, with Marketing feedback, with both), PRC-SUMMARY (matched, matched with discrepancies and unmatched items and amounts per insurer),

PRC-UNMATCHED-LOC (per location), PRC-UNMATCHED-AO (per Marketing AO / AB, booked and pre-booked), PRC-UNMATCHED-FEEDBACK (unmatched accounts with feedback and disposition) and PRC-DISPOSITION (summary per disposition), in the layouts of Annex IV (section 6.4).

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

- The user chooses the report, insurer and month and generates it.

Notifications

- None.

Audit

- Runs are archived.

Acceptance criteria

- PRC-SUMMARY of a cycle equals the bucket counts and amounts of the cycle.
- PRC-REGISTER with insurer feedback shows the insurer remarks per account.

4.6 Commission Receivables / Direct Payment

Commission Receivables handles direct payment (DP) accounts, where the client paid the insurer directly: BDOI bills the insurer for its commission, follows the answer, collects the commission and reverses the premium receivable. It also runs the incentive programmes and tracks BIR certificates. API paths of this section are under /api/v1/commission.

FR-OP-090 Take in the DP lists of Head Office and branches

BRD trace	CMRID.001 (p.106)	Actor	Commission Handler
Priority	Must have	Fit	NEW
Screens	DP Lists (upload, pull, branch submissions)	API	GET / POST ../dp/lists; POST ../dp/lists/pull; GET ../dp/submissions; feed COLLECTION_DP_LIST

Description

Marketing Collection of Head Office and each branch submits its DP list. The handler uploads it, or pulls the lists waiting in the Collection feed. The file name must follow <Branch>_DP_<yyyyMMdd>; a file with the same content is refused. The branch submission tracker shows per branch and period which lists arrived. The lists are consolidated with de-duplication by invoice and become the basis of billing.

Preconditions

- The user has COMMREC_PROCESS.

Main flow

- The handler uploads a list or clicks **Pull**.
- BIBS checks the name and the layout and reads each row as a DP account DPL-yyyy-n.
- BIBS validates each account (FR-OP-091).

Business rules

Rule	Statement	Kind	Maintained in
R1	Naming <Branch>_DP_<yyyyMMdd>, for example HO_DP_20260930.xlsx.	Fixed	-
R2	An invoice already active on another list is a duplicate.	Fixed	-

Validations and messages

Check	Message shown	Code
Name not in the convention	Name the DP list <Branch>_DP_<yyyyMMdd> (e.g. HO_DP_20260930.xlsx): <file>	DP_LIST_NAME
Date part not a date	The date in <file> is not a date (yyyyMMdd)	DP_LIST_NAME
Same file again	<file> was already taken in as <list no>	DP_LIST_DUPLICATE
No invoice column	The DP list has no '<column>' column	DP_LIST_LAYOUT
Row without invoice	The row has no invoice number	DP_ROW_INCOMPLETE
Premium not an amount	Premium '<value>' is not an amount	DP_ROW_PREMIUM
No invoice of the list booked	No invoice of the list is booked: upload it from Commission Receivables	DP_LIST_COMPANY

Screens and fields: DP Lists (upload)

Field	Type	Mand.	Source / LOV	Validation
DP List File	File	Yes	-	Naming convention

Notifications

- None.

Audit

- Each list keeps file name, hash, branch, period and received time.

Acceptance criteria

1. A list named CEB_DP_20260930.xlsx is taken in and appears in the tracker for branch CEB.
2. A list named dp list.xlsx is refused with DP_LIST_NAME.

Superseded source. CMRID.001 names shared folders of Head Office and branches. BRD-4 Collections replaces the DP list by the Collections disposition "DP PR for reversal" (OQ38); the upload stays as built until then.

FR-OP-091 Validate, sanitise and tag DP accounts

BRD trace	CMRID.002 (p.106-107), CMRID.007 (p.109), CMRID.008 (p.109-110), CMRID.013 (p.112)	Actor	System; Commission Handler
Priority	Must have	Fit	NEW
Screens	DP Accounts (tabs by tag, account detail with rule results)	API	GET ../dp/items; GET ../dp/items/counts; POST ../dp/items/confirm, /exclude, /{id}/revalidate

Description

Each DP account is checked against the invoice ledger: invoice booked; tagged direct payment; not cancelled or written off; booked with the listed insurer; listed premium equal to the booked gross premium within 1.00; no pending negative adjustment; commission still open; policy number present. The result of every rule is kept on the account. The sanitation result is VALID, DUPLICATE, INVALID or INCOMPLETE.

BIBS computes the commission receivable of each account (commission, VAT, withholding tax, net) from the ledger. Valid accounts are tagged DP for confirmation; after the handler confirms that the client paid the insurer in full they become DP for billing. Tags: DP_FOR_CONFIRMATION, DP_FOR BILLING, BILLED, APPROVED, REJECTED, COLLECTED, PR_REVERSED, EXCLUDED.

Preconditions

- The user has COMMREC_PROCESS.

Main flow

- BIBS validates the accounts of a list.
- The handler reviews the DP for confirmation tab and the rule results.
- The handler confirms the fully paid accounts; they move to DP for billing.

Alternate and exception flows

- The handler excludes an account with a reason; it stays on record as EXCLUDED.
- The handler re-validates an account after the ledger changed.

Business rules

Rule	Statement	Kind	Maintained in
R1	Only confirmed, fully paid, valid accounts are billed.	Fixed	-
R2	Premium tolerance 1.00 between the list and the booking.	Fixed	-

Validations and messages

Check	Message shown	Code
Action on an account in another tag	Account <invoice> (<tag>) cannot be <action>	DP_ITEM_STATE
Account already in the target tag	Account <invoice> is already <tag>	DP_ITEM_STATE

Notifications

- None.

Audit

- Rule results, confirmations, exclusions and their reasons are kept per account.

Acceptance criteria

- An account whose invoice is not tagged direct payment is INVALID with the failed rule shown.
- The same invoice on two branch lists is DUPLICATE on the second.
- Confirming a valid account moves it to DP for billing.

FR-OP-092 Bill the insurer for DP commission

BRD trace	CMRID.009 (p.110-111), CMRID.012 (p.111-112)	Actor	Commission Handler
Priority	Must have	Fit	NEW (CMRID.009), CHANGE (CMRID.012)
Screens	DP Accounts (Prepare Billing); DP Billings; DP Billing (Send)	API	POST / GET .../dp/billings; GET .../dp/billings/{id}; GET .../dp/billings/{id}/items, /file; POST .../dp/billings/{id}/send, /cancel

Description

The handler prepares billings from the accounts for billing: one billing CRB-yyyy-n per insurer, assigned to the handler (workflow OPS_DP BILLING, section 5). The billing workbook lists the accounts with premium, commission, VAT, withholding tax and net. **Send Billing to Insurer** e-mails it as a password-protected file with the password in a separate e-mail, logs the request and sets the answer due date 10 working days later on the head office calendar.

Preconditions

- The user has COMMREC_PROCESS; accounts are DP for billing.

Main flow

- The handler clicks **Prepare Billing**; BIBS creates one billing per insurer.
- The handler opens a billing and clicks **Send Billing to Insurer**.
- BIBS sends it, tags the accounts BILLED and moves the billing to AWAITING_INSURER.

Alternate and exception flows

- Cancel a billing before it is sent; its accounts return to DP for billing.

Business rules

Rule	Statement	Kind	Maintained in
R1	Answer due in 10 working days.	Configurable	Parameter CMR_FEEDBACK_WORKING_DAYS
R2	Billing layout to be confirmed (OQ38).	Configurable	Billing columns

Validations and messages

Check	Message shown	Code
Nothing to bill	No account is confirmed for billing	DP_NOTHING_TO_BILL
Account not confirmed	Account <invoice> is not confirmed for billing (<tag>)	DP_ITEM_STATE
Already sent	Billing <no> was already sent	DP_BILLING_SENT
No insurer e-mail	Enter the e-mail address of <insurer>	DP_NO_RECIPIENT
Account removed while on billing	Account <invoice> is on a billing: cancel the billing first	DP_ITEM_BILLED

Screens and fields: Send Billing

Field	Type	Mand.	Source / LOV	Validation
To	Text	Yes	Insurer e-mail	Valid e-mail

Field	Type	Mand.	Source / LOV	Validation
Cc	Text	No	-	Valid e-mail

Notifications

- E-mails to the insurer with the protected billing and the password.

Audit

- The billing keeps file, recipients, sent time and due date.

Acceptance criteria

- Accounts of two insurers produce two billings.
- A sent billing shows its due date 10 working days later.

FR-OP-093 Record insurer answers and flag late feedback

BRD trace	CMRID.008 (p.109-110), CMRID.009 (p.110-111), CMRID.011 (p.111)	Actor	Commission Handler; System (job DP_FEEDBACK_SLA)
Priority	Must have	Fit	NEW (CMRID.008, 009), CHANGE (CMRID.011)
Screens	Insurer Responses (answers upload); DP Billing (answers); DP Billings (SLA)	API	POST .../dp/billings/{id}/answers; POST .../dp/responses; feed INSURER_DP_RESPONSE; job DP_FEEDBACK_SLA

Description

The insurer approves or rejects each account. Answers are entered on the billing or uploaded (columns Billing No., Invoice No., Decision, Reason, Comment). A rejection needs a reason from DP_FEEDBACK_REASON. Approved accounts go to collection; rejected accounts are returned to the Collection team through the COLLECTION_DP_RETURNED extract with the time and reason. A billing whose accounts were all rejected moves to RETURNED_TO_COLLECTION.

The job DP_FEEDBACK_SLA (daily) raises DP_FEEDBACK_OVERDUE for billings without an answer after the due date; the billing list shows the SLA countdown.

Preconditions

- The billing is AWAITING_INSURER.

Main flow

- The handler enters or uploads the answers.
- BIBS tags the accounts APPROVED or REJECTED and moves the billing.

Alternate and exception flows

- No answer in time. BIBS flags the billing overdue and notifies.

Business rules

Rule	Statement	Kind	Maintained in
R1	Feedback reasons (values from BDOI, OQ40; Others until then).	Configurable	LOV DP_FEEDBACK_REASON

Validations and messages

Check	Message shown	Code
Rejection without reason	Give the insurer's reason for rejecting <invoice>	DP_REASON_REQUIRED
Billing not waiting	Billing <no> is not waiting for the insurer	DP_BILLING_NOT_AWAITING
Invoice not on the billing	Invoice <no> is not on billing <no>	DP_NOT_ON_BILLING
Unknown billing in the file	Billing <no> does not exist	DP_BILLING_UNKNOWN
Decision not APPROVED or REJECTED	Decision '<value>' is neither APPROVED nor REJECTED	DP_RESPONSE_DECISION
Column missing	The insurer's answer has no '<column>' column	DP_RESPONSE_LAYOUT

Notifications

- DP_FEEDBACK_OVERDUE to the handlers and TLs.

Audit

- Each answer keeps decision, reason, comment, user and time; returned accounts keep the return time.

Acceptance criteria

- A rejection without a reason is refused.
- A billing sent 11 working days ago without answer shows overdue and raises the alert.
- Rejected accounts are in the COLLECTION_DP_RETURNED extract.

FR-OP-094 Collect DP commission and reverse the premium receivable

BRD trace	CMRID.010 (p.111), MKTID.012 (p.75-76)	Actor	Commission Handler; System
Priority	Must have	Fit	NEW
Screens	DP Billing (Collect); DP Accounts (Reverse, Reinstate)	API	POST .../dp/billings/{id}/collect; POST .../dp/items/{id}/reverse, /reinstate

Description

When the insurer pays the commission of an approved billing, the handler records the collection with the bank account, collection date and BIR certificate number. BIBS posts OPS_DP_COMMISSION_COLLECT (cash and CWT against the commission receivable; realisation of commission and output VAT), requests the commission OR from Cashiering and, for each approved account, records the DP_REVERSAL of the premium receivable and DTIP and the APPLIED commission. The billing moves to COLLECTED and then CLOSED.

The reversal is made only for accounts tagged direct payment by Marketing (MKTID.011) and confirmed collected; an account that fails the tag check blocks and is notified.

A reversed account can be reinstated with a direct payment reason from REINSTATEMENT_REASON (CSHID.004 group b), then reversed again. The DP_CANCELLATION reason also sends the collected commission to Unapplied Payments.

Preconditions

- The billing is APPROVED; the user has COMMREC_PROCESS.

Main flow

- The handler clicks **Collect** and enters the collection details.

2. BIBS posts the collection, requests the OR and reverses the PR of each approved account.
3. The billing shows the OR number and status.

Alternate and exception flows

- Reinstate an account with a reason.

Business rules

Rule	Statement	Kind	Maintained in
R1	The GL entry of the PR reversal is posted only when DP_PR_REVERSAL_POSTING is on; the ledger reversal is always recorded (OQ07).	Configurable	Parameter DP_PR_REVERSAL_POSTING (false)
R2	Proposed collection bank account.	Configurable	Parameter CMR_DP_COLLECTION_BANK

Validations and messages

Check	Message shown	Code
Nothing approved	Billing <no> has no approved account to collect	DP_BILLING_NOT_APPROVED
No bank account	Choose the bank account the commission was received in	DP_BANK_REQUIRED
Account not tagged DP	Invoice <no> is not tagged direct payment by Marketing: its premium receivable cannot be reversed (MKTID.012)	DP_TAG_INVALID
Reinstate without reason	Choose a direct payment reinstatement reason	DP_REINSTATE_REASON

Screens and fields: Collect

Field	Type	Mand.	Source / LOV	Validation
Bank Account	List	Yes	GL bank accounts	Default CMR_DP_COLLECTION_BANK
Collection Date	Date	Yes	-	Not in the future
BIR Certificate No.	Text	No	-	-

Notifications

- None.

Audit

- The collection journal, OR number and every reversal and reinstatement are recorded.

Acceptance criteria

1. Collecting an approved billing posts the collection, shows the commission OR and records DP_REVERSAL on each account.
2. An account not tagged direct payment is not reversed and the message names it.
3. A reinstated account can be reversed again.

Difference from the BRD. MKTID.012 asks to reverse the DP premium receivable automatically. Booking posts no premium receivable for direct payment invoices, so the GL entry of the reversal is off until the DP accounting is agreed (OQ07); the reversal is recorded in the invoice ledger in all cases.

FR-OP-095 Compute and post incentives

BRD trace	CMRID.003 (p.107), CMRID.005 (p.108-109), CMRID.006 (p.109)	Actor	Commission TL (INCENTIVE_MANAGE, COMMREC_APPROVE)
Priority	Must have	Fit	NEW
Screens	Incentive Schemes (tier editor); Incentive Runs (compute, lines, post, cancel)	API	GET / POST ../incentives/schemes; GET / PUT ../incentives/schemes/{id}; GET / POST ../incentives/runs; POST ../incentives/runs/{id}/post, /cancel

Description

A scheme has a type (No Touch, Top Up, Motor Mania, Other), a calculation (TARGET_TIERED or FIXED_PER_POLICY), a period (for example June to December, quarterly, yearly), beneficiary (BDOI or branch), insurer, segments, product lines, effective dates and tiers. Target tiers hold a production target, rate and multiplier; fixed tiers hold a minimum basic premium and a fixed amount per policy.

A run INR-yyyy-n computes a scheme on a booking period. TARGET_TIERED applies the rate of the highest target reached times the multiplier to every eligible invoice; FIXED_PER_POLICY pays each policy the amount of the highest minimum premium it meets (Motor Mania). Negative amounts and erroneous bookings (cancelled or written off) are excluded when the exclusion rule is active and raise INCENTIVE_EXCLUSION.

Posting (COMMREC_APPROVE) publishes OPS_INCENTIVE_ACCRUE per insurer and, for branch schemes, OPS_INCENTIVE_PASS_ON per sales unit with a PASS_ON request to Disbursement.

Preconditions

- The scheme has tiers.

Main flow

- The TL maintains the scheme and its tiers.
- The TL computes a run for a period and reviews the lines and exclusions.
- The TL posts the run.

Alternate and exception flows

- Cancel a computed run.

Business rules

Rule	Statement	Kind	Maintained in
R1	Schemes are inactive without tiers until BDOI gives targets, rates and amounts (OQ39).	Configurable	Incentive Schemes
R2	Exclusion rules NEGATIVE_AMOUNT and ERRONEOUS_BOOKING.	Configurable	LOV INCENTIVE_EXCLUSION_RULE

Validations and messages

Tier incomplete (tiered)	Each tier needs a production target and a rate above zero	INCENTIVE_TIER_INVALID

Check	Message shown	Code
Tier incomplete (fixed)	Each tier needs a minimum basic premium and a fixed amount above zero	INCENTIVE_TIER_INVALID
Scheme dates	The scheme ends before it starts	INCENTIVE_SCHEME_DATES
Run period	The period ends before it starts	INCENTIVE_RUN_PERIOD
Run earned nothing	Run <no> earned no incentive to post	INCENTIVE_RUN_NOTHING
Run already posted or cancelled	Run <no> is <status> and cannot change	INCENTIVE_RUN_STATE

Screens and fields: Incentive Scheme

Field	Type	Mand.	Source / LOV	Validation
Code / Name	Text	Yes	-	Unique code
Scheme Type	List	Yes	No Touch, Top Up, Motor Mania, Other	-
Calculation	List	Yes	TARGET_TIERED / FIXED_PER_POLICY	-
Period	List	Yes	Monthly, quarterly, half-year, yearly	-
Beneficiary	List	Yes	BDOI / Branch	-
Insurer Code	Look-up	No	Insurer master	-
Segments / Product Lines	Multi-select	No	Segments / product lines	-
Effective From / To	Date	Yes / No	-	To >= From

Notifications

- INCENTIVE_EXCLUSION alert when lines are excluded.

Audit

- Scheme changes, runs, exclusions and postings are recorded.

Acceptance criteria

1. A Motor Mania scheme with tiers 10,000 / 500 and 50,000 / 1,000 pays 1,000.00 for a policy of basic premium 60,000.00 and nothing below 10,000.00.
2. A cancelled invoice is excluded from a run and listed with the reason.

FR-OP-096 Submit BIR certificates to Comptrollership

BRD trace	CMRID.015 (p.113), CMRID.010 (p.111)	Actor	Commission Handler (submit); Comptrollership (acknowledge)
Priority	Must have	Fit	NEW
Screens	BIR Certificates; BIR Certificate (workflow panel, ORs, scanned copy)	API	GET / POST .../certificates; GET / PUT .../certificates/{id}; GET .../certificates/receipts; POST .../certificates/{id}/acknowledge, /reject

Description

The handler records a withholding tax certificate received from an insurer (BIR form, certificate number, period, tax withheld, scanned copy) and tags it to the ORs issued by the Cashier that it covers. The submission BCS-yyyy-n goes to Comptrollership (workflow OPS_BIR_CERT, section 5), which acknowledges it or rejects it with a reason; a rejected submission is corrected and resubmitted. Submission and acknowledgment dates are kept.

Preconditions

- The user has BIR_CERT_SUBMIT.

Main flow

- The handler adds the certificate, attaches the scan and selects the ORs.
- The handler submits; Comptrollership is notified.
- Comptrollership acknowledges.

Alternate and exception flows

- Reject with a reason; the handler resubmits.

Business rules

Rule	Statement	Kind	Maintained in
R1	A certificate covers at least one OR.	Fixed	-

Validations and messages

Check	Message shown	Code
No OR tagged	Tag the certificate to at least one official receipt (CMRID.015)	CERT_NO_OR
Tax zero	The tax withheld must be above zero	CERT_AMOUNT
Period	The certificate period ends before it starts	CERT_PERIOD
No insurer	Choose the company and the insurer of the certificate	CERT_INSURER_REQUIRED
Reject without reason	Give the reason of the rejection	CERT_REASON_REQUIRED
Resubmit a submission not rejected	Only a rejected submission can be resubmitted	CERT_NOT_REJECTED

Screens and fields: BIR Certificate

Field	Type	Mand.	Source / LOV	Validation
Insurer Code	Look-up	Yes	Insurer master	-
BIR Form	List	Yes	2307, others	-
Certificate No.	Text	Yes	-	-
Period From / To	Date	Yes	-	To >= From
Tax Withheld	Amount	Yes	-	> 0
Official receipts	Multi-select	Yes	ORs of the insurer	At least one

Notifications

- The approvers of BIR_CERT_ACK on submission; the handler on rejection.

Audit

- Each submission keeps its history with dates and reasons.

Acceptance criteria

- A certificate without an OR cannot be submitted.
- Comptrollership rejects a certificate with a reason; the handler resubmits it and it is acknowledged.

FR-OP-097 Track estimated items and yearly production

BRD trace	RMTID.037 (p.68), CMRID.014 (p.112-113)	Actor	Commission Handler
Priority	Must have	Fit	NEW
Screens	Estimated Items; Report CMR-PRODUCTION-YEARLY	API	GET / POST .../estimated; /api/v1/reports (CMR-PRODUCTION-YEARLY)

Description

The handler flags invoices as estimated items with a reason, or clears the flag; the ledger's ESTIMATED flag shows separately with its label on the production register and the yearly production report. CMR-PRODUCTION-YEARLY consolidates production per branch and insurer for the year, with total production, estimated items and performance against targets.

Preconditions

- The user has COMMREC_PROCESS.

Main flow

- The handler enters the invoice and reason and flags it.
- The reports show the item as estimated.

Business rules

Rule	Statement	Kind	Maintained in
R1	Definition of estimated items to be confirmed (OQ27).	Configurable	-

Screens and fields: Estimated Items

Field	Type	Mand.	Source / LOV	Validation
Invoice No.	Text	Yes	Invoice ledger	Booked invoice
Reason	Text	Yes	-	-

Notifications

- None.

Audit

- Flag changes are recorded as ledger status changes.

Acceptance criteria

- A flagged invoice appears as estimated on CMR-PRODUCTION-YEARLY and on the production register.
- The yearly report includes every branch and insurer with production.

FR-OP-098 Report commission receivables

BRD trace	CMRID.004 (p.108)	Actor	Commission Handler; TL
Priority	Must have	Fit	NEW
Screens	Reports (category Operations)	API	/api/v1/reports (CMR-*)

Description

CMR-COMMISSION-RECEIVABLE shows commission booked, collected and outstanding per insurer, separating DP / direct bill from regular commissions, with partial remittances and net commission. The other Commission reports are CMR-DP-STATUS, CMR-INCENTIVE, CMR-FEEDBACK-SLA and CMR-BIR-CERT (section 6.5).

Preconditions

- The user has OPS_REPORT_VIEW.

Main flow

- The user generates the report for a period.

Business rules

Rule	Statement	Kind	Maintained in
R1	Final layout to be confirmed (OQ42).	Configurable	Report layouts

Notifications

- None.

Audit

- Runs are archived.

Acceptance criteria

- A DP account collected and a regular invoice remitted appear in separate groups with their net commission.

4.7 Marketing Collection items

The MKTID requirements are activities of Marketing (Marketing Collection HO and branches, Marketing TL / UH) that feed Operations. BRD-4 Collections confirmed that MKTID.001-009 and MKTID.011 stay in Operations as built; the 2307 and DP tagging (MKTID.010, 012, 013) move to the Collections dispositions (OQ45).

Table 11: Marketing items and where they are specified

BRD ID	Activity	FR	Status after BRD-4
MKTID.001	Request to send the remittance schedule to the insurer	FR-OP-110	Stays in Operations
MKTID.002-007	Hold requests: tag, remove, assign, create / cancel / extend, approve, reference numbers	FR-OP-111	Stays in Operations
MKTID.008	Endorsement slip for external endorsements	FR-OP-114	Stays in Operations
MKTID.009	Special remittance request	FR-OP-112	Stays in Operations
MKTID.010, 013	BIR 2307 tagging and reinstatement requests	FR-OP-113	Collections disposition "PR 2307 for reversal"

BRD ID	Activity	FR	Status after BRD-4
MKTID.011	DP tag at quotation and policy	FR-OP-004	Stays (booking flag)
MKTID.012	DP premium receivable reversal after valid tagging	FR-OP-094	Collections disposition "DP PR for reversal"

FR-OP-110 Send the remittance schedule to the insurer

BRD trace	MKTID.001 (p.70-71)	Actor	Remittance Processor on the request of Marketing
Priority	Must have	Fit	CHANGE
Screens	Remittance Batch (Send via Email)	API	POST /api/v1/remittance/batches/{id}/send-schedule

Description

Once a batch is approved, the remittance schedule with the client details (client, amount, dates) is e-mailed to the insurer as a password-protected Excel file, with the password in a separate e-mail. The send is confirmed on the batch and allowed once per batch.

Preconditions

- The batch is approved; the user has REMIT_PROCESS.

Main flow

- The processor clicks **Send via Email** and confirms To, subject and message.
- BIBS sends the protected schedule and records the send.

Business rules

Rule	Statement	Kind	Maintained in
R1	One send per batch.	Fixed	-

Validations and messages

Check	Message shown	Code
Batch not approved	The schedule of <batch> can be sent once the batch is approved	REMIT_SCHEDULE_NOT_APPROVED
Already sent	The schedule of <batch> was already sent	REMIT_SCHEDULE_ALREADY_SENT

Screens and fields: Send via Email

Field	Type	Mand.	Source / LOV	Validation
To	Text	Yes	Insurer e-mail	Valid e-mail
Subject	Text	Yes	-	-
Message	Text	No	-	-

Notifications

- E-mails to the insurer.

Audit

- The send is logged on the batch and in the messaging log.

Acceptance criteria

1. The schedule of an approved batch is sent once; a second send is refused.

Difference from the BRD. MKTID.001 describes a Marketing request to send the schedule. The request is made outside BIBS (why the schedule goes through Marketing is OQ22); the Remittance processor sends it from the batch.

FR-OP-111 Request, approve, extend, cancel and release remittance holds

BRD trace	MKTID.002 (p.71), MKTID.003 (p.71-72), MKTID.004 (p.72), MKTID.005 (p.72-73), MKTID.006 (p.73), MKTID.007 (p.73-74), RMTID.021 (p.61)	Actor	Marketing Collection (request); Marketing TL / UH (approve); System (expiry)
Priority	Must have	Fit	NEW (MKTID.002, 003, 005, RMTID.021), CHANGE (MKTID.004, 006), CONFIGURE (MKTID.007)
Screens	Remittance Holds; Remittance Hold (workflow panel)	API	GET / POST /api/v1/remittance/holds; GET / PUT .../holds/{id}; POST .../holds/{id}/submit, /cancel, /decision, /extend, /extension-decision, /request-cancel, /cancel-decision, /release, /assign; POST .../holds/upload; feed COLLECTION_HOLD; job HOLD_EXPIRY

Description

Marketing raises a hold request HLD-yyyy-n on an invoice with a reason, hold-until date and remarks, singly or by file (invoiceNo, reasonCode, holdUntil, remarks). One live request per invoice. Submission makes the invoice REQUESTED_FOR_HOLD; approval by another user sets the HOLD flag, which excludes the invoice from extraction (FR-OP-031). The approver assigns the hold to an active remittance processor, who is notified.

An active hold is extended (new hold-until date, with approval), cancelled (with approval) or released by Marketing; release makes the invoice eligible again. The job HOLD_EXPIRY (daily 08:15 PHT) releases holds whose date has passed and notifies holds that reach their date the next day. Holds from Collection arrive through the feed COLLECTION_HOLD.

Preconditions

- The user has HOLD_REQUEST (request) or HOLD_APPROVE (decide, assign).

Main flow

1. Marketing creates the hold request and submits it.
2. The Marketing TL approves it; the invoice is on hold.
3. The TL assigns the hold to a remittance processor.
4. On the hold-until date the job releases the hold.

Alternate and exception flows

- Reject. The hold is rejected; the invoice returns to its previous status.
- Extension. Marketing requests an extension; the TL approves or rejects it.
- Cancellation. Marketing requests the cancellation; the TL approves (released) or rejects (still active).
- Release. Marketing releases the hold before its date.

Business rules

Rule	Statement	Kind	Maintained in
R1	Only invoices UNPROCESSED, WITH_OUTSTANDING_BALANCE or PARTIALLY_REMITTED, not direct payment, can be held.	Fixed	-
R2	The approver is never the requester.	Fixed	-
R3	Hold reasons (values from BDOI, OQ24); no maximum hold period.	Configurable	LOV HOLD_REASON

Validations and messages

Check	Message shown	Code
Invoice not holdable	Invoice <no> cannot be held: remittance status <status>	HOLD_INVOICE_NOT_HOLDABLE
Hold already open	Invoice <no> already has hold <no>	HOLD_DUPLICATE
Date not in the future	The hold-until date must be in the future	HOLD_DATE
Extension not later	The extension must be later than <date>	HOLD_EXTENSION_DATE
Approver is the requester	Hold <no> must be approved by another user	HOLD_FOUR_EYES
Assignee not a processor	<user> is not an active remittance processor	HOLD_ASSIGNEE_NOT_ELIGIBLE
Action in another stage	Hold <no> is <stage>, not <expected>	HOLD_STAGE

Screens and fields: Hold request

Field	Type	Mand.	Source / LOV	Validation
Invoice No.	Look-up	Yes	Invoice ledger	Holdable invoice
Reason	List	Yes	LOV HOLD_REASON	-
Hold Until	Date	Yes	-	In the future
Remarks	Text	No	-	-
Remittance Processor (User ID)	Look-up	Cond.	Users with REMIT_PROCESS	On assignment

Notifications

- The approvers on submission; the requester on decision; the processor on assignment; HOLD_EXPIRING the day before the hold date.

Audit

- The hold history keeps every action, date and user; REM-HOLD reports the holds.

Acceptance criteria

- An approved hold excludes the invoice from the next extraction with reason ON_HOLD.
- The requester cannot approve their own hold.
- A hold whose date passed is released by the job and the invoice is extracted by the next run.
- Hold numbers HLD-2026-n are unique and searchable.

FR-OP-112 Request a special remittance

BRD trace	MKTID.009 (p.74)	Actor	Marketing Collection; Marketing TL
Priority	Must have	Fit	NEW
Screens	Special Remittance (New request, upload)	API	POST /api/v1/remittance/special; POST .../special/upload; feed COLLECTION_SPECIAL_REMIT

Description

Marketing requests a special remittance SPR-yyyy-n for an invoice with a condition (Claims, Renewal, Installment due, Immediate OR issuance) and remarks, singly or by file (invoiceNo, conditionCode, remarks). BIBS validates the request on creation - the invoice is UNPROCESSED or PARTIALLY_REMITTED with paid AR applied, the checks are cleared (holding period) and it is not on hold - and sends it for approval. Once approved, the request is processed in Remittance (FR-OP-040).

Preconditions

- The user has SPECIAL_REMIT_REQUEST.

Main flow

- Marketing enters the invoice, condition and remarks.
- BIBS validates the eligibility and records the validation note.
- The request moves to FOR_APPROVAL; the approvers are notified.

Alternate and exception flows

- Not eligible. BIBS refuses the request with the reason.

Business rules

Rule	Statement	Kind	Maintained in
R1	Conditions from the list.	Configurable	LOV SPECIAL_REMIT_CONDITION
R2	Claims condition confirmed through the Claims feed CLAIMS_SPECIAL_REMIT when connected; otherwise a note (OQ46).	Configurable	-

Validations and messages

Check	Message shown	Code
Invoice not eligible	Invoice <no> cannot be remitted specially: <reason>	SPECIAL_REMIT_NOT_ELIGIBLE
Request already open	Invoice <no> already has request <no>	SPECIAL_REMIT_DUPLICATE

Screens and fields: Special remittance request

Field	Type	Mand.	Source / LOV	Validation
Invoice No.	Look-up	Yes	Invoice ledger	Eligible invoice
Condition	List	Yes	LOV SPECIAL_REMIT_CONDITION	-
Remarks	Text	No	-	-

Notifications

- REMIT_BATCH_FOR_APPROVAL to the holders of SPECIAL_REMIT_APPROVE.

Audit

- The request and its validation note are recorded.

Acceptance criteria

1. A request on an invoice paid by a check deposited yesterday is refused with the holding reason.
2. A valid request moves to For approval with the note "Validated - paid AR ... applied and cleared".

FR-OP-113 Tag BIR 2307 reversals and reinstatement requests

BRD trace	MKTID.010 (p.74-75), MKTID.013 (p.46)	Actor	Marketing Collection (CWT_TAG)
Priority	Must have	Fit	NEW
Screens	BIR 2307 (Tag 2307); bulk CWT_TAGS	API	POST /api/v1/cashiering/cwt; bulk CWT_TAGS; feed COLLECTION_CWT2307

Description

Marketing tags the 2307 of an invoice with a reference CWT-yyyy-n generated at tagging, the path (certificate or cash), the certificate number and period and the amount, singly or by file. The tag flows to Cashiering by its reference (FR-OP-026). Marketing also submits reinstatement requests with the reason and payment details (FR-OP-014); when the premium was already remitted, the case goes to Adjustment with the insurer's written confirmation of refund as a mandatory attachment.

Preconditions

- The user has CWT_TAG; the invoice has a 2% CWT portion outstanding.

Main flow

1. Marketing enters the invoice, path, certificate and amount.
2. BIBS checks the invoice and issues the reference.
3. The tag appears in the Cashiering 2307 queue.

Alternate and exception flows

- Marketing cancels a tag before Cashiering receives it.

Business rules

Rule	Statement	Kind	Maintained in
R1	One tag in process per invoice.	Fixed	-

Validations and messages

Check	Message shown	Code
Unknown invoice	Unknown invoice <no>	CWT_INVOICE_UNKNOWN
Tag already in process	Invoice <no> already has a 2307 tag in process	CWT_ALREADY_TAGGED
No 2% outstanding	Invoice <no> has no 2% CWT portion outstanding	CWT_AMOUNT
Certificate path without number	A certificate tag needs the BIR 2307 certificate number	CWT_CERTIFICATE_REQUIRED

Screens and fields: Tag 2307

Field	Type	Mand.	Source / LOV	Validation
Invoice No.	Look-up	Yes	Invoice ledger	2% CWT outstanding
Path	Option	Yes	Certificate / Cash	-
Certificate No.	Text	Cond.	-	Required for certificate
Period From / Period To	Date	Cond.	-	Certificate path
Amount	Amount	Yes	-	> 0
Remarks	Text	No	-	-

Notifications

- None.

Audit

- The tag history keeps every action with user, time and reason.

Acceptance criteria

1. A certificate tag receives a reference CWT-2026-n that Cashiering finds by that reference.
2. A second tag on the same invoice is refused while the first is in process.

FR-OP-114 Generate the endorsement slip for Marketing

BRD trace	MKTID.008 (p.114)	Actor	Marketing Collection / TL (ADJ_REQUEST)
Priority	Must have	Fit	NEW
Screens	Endorsement Request page (Endorsement Slip)	API	GET /api/v1/adjustment/requests/{id}/endorsement-slip

Description

Marketing generates the endorsement slip of its external endorsement requests with the function of FR-OP-060 (same fields, same number ES-yyyy-n). No slip is produced for internal adjustments.

Preconditions

- The request is external.

Main flow

1. The Marketing user opens the request and downloads or prints the slip.

Validations and messages

Check	Message shown	Code
Internal adjustment	Internal adjustments have no endorsement slip (ADJID.015)	ADJ_NO_SLIP_FOR_INTERNAL

Notifications

- None.

Audit

- As FR-OP-060.

Acceptance criteria

1. A Marketing user prints the slip of a partial cancellation request; the slip number is the one Adjustment sees.

4.8 Disbursement queue

Until the Disbursement module of BRD-5 is delivered, Operations sends its payment requests to an in-app Disbursement queue. API paths are under /api/v1/ops/disbursements.

FR-OP-120 Work payment requests in the Disbursement queue

BRD trace	DBMID.001 (p.46), RMTID.034 (p.67)	Actor	Disbursement (DISB_PROCESS)
Priority	Must have	Fit	NEW
Screens	Disbursement Queue	API	GET .../; GET .../{id}; POST .../{id}/acknowledge, /dv, /paid, /return, /cancel

Description

Payment requests DSQ-yyyy-n of type REMITTANCE (remittance batches), REFUND (unapplied refunds), CWT2307 (2307 batches) and PASS_ON (incentive pass-on) arrive with their payee, amount, source and documents. Disbursement acknowledges a request, enters the DV number, marks it paid, or returns it with a reason. Each status (SENT, ACKNOWLEDGED, DV_ASSIGNED, PAID, RETURNED, CANCELLED) is sent back to the source module (event DisbursementStatusChanged): Remittance updates the invoices (FR-OP-036), Cashiering completes the refund or releases the 2307 batch.

Preconditions

- The user has DISB_PROCESS.

Main flow

1. Disbursement opens the queue and a request.
2. Disbursement acknowledges it, then enters the DV number, then marks it paid.
3. BIBS notifies the source module and its users at each step.

Alternate and exception flows

- Return with a reason; the source team is notified.

Business rules

Rule	Statement	Kind	Maintained in
R1	A request moves only forward through its statuses.	Fixed	-

Validations and messages

Check	Message shown	Code
Amount not positive	A payment request needs a positive amount	DISBURSEMENT_AMOUNT
Action not allowed in the status	Payment request <no> is <status> and cannot be <action>	DISBURSEMENT_STATUS
Too many references	Too many references on one payment request	DISBURSEMENT_REFERENCES

Screens and fields: Disbursement Queue (DV)

Field	Type	Mand.	Source / LOV	Validation
DV No.	Text	Yes	-	-
Reason	Text	Cond.	-	Required to return

Notifications

- OPS_DISBURSEMENT_STATUS to the users of the source module.

Audit

- Each status change is kept with user and time.

Acceptance criteria

1. Entering the DV number of a remittance request makes its invoices FULLY_REMITTED.
2. A paid request cannot be returned.

FR-OP-121 Release BIR 2307 certificates to insurers

BRD trace	DBMID.001 (p.46)	Actor	Disbursement
Priority	Must have	Fit	NEW
Screens	Disbursement Queue; BIR 2307 (batches)	API	POST /api/v1/cashiering/cwt/batches/{id}/route, /release

Description

Disbursement receives the BIR 2307 transaction report and the certificates sorted per insurer as a CWT2307 request. When it is paid, the batch is released to the insurer (**Release to Insurer**) and BIBS posts Dr DTIP / Cr PR2307, which reverses the DTIP of the 2% and completes the zeroing of the PR (FR-OP-026).

Preconditions

- The 2307 batch is WITH_DISBURSEMENT.

Main flow

1. Disbursement processes the request as in FR-OP-120.
2. On payment the batch is released and the DTIP offset is posted.

Business rules

Rule	Statement	Kind	Maintained in
R1	One batch per insurer.	Fixed	-

Validations and messages

Check	Message shown	Code
Batch already routed or released	<batch> is <status>	CWT_BATCH_ROUTED

Notifications

- OPS_DISBURSEMENT_STATUS to Cashiering.

Audit

- Release and posting are in the batch history.

Acceptance criteria

- Releasing a paid 2307 batch posts the DTIP offset for each tag of the batch.

Superseded by BRD-5. The Disbursement module of BRD-5 implements the same gateway (OQ02 answered); the in-app queue is the default until it is delivered.

4.9 Interfaces and flow-in**FR-OP-130 Integrate with other systems through ports**

BRD trace	BRQID.004 (p.18)	Actor	System
Priority	Must have	Fit	NEW
Screens	Interfaces; Hand-offs and Extracts	API	/api/v1/ops/flow-in; /api/v1/ops/extracts; /api/v1/ops/handoffs

Description

Operations exchanges data with the systems it depends on through ports with a default adapter: CollectionFeed (check pick-up, 2307 tags, commission payments, holds, special remittances, DP lists, returned DP accounts, refunds), DisbursementGateway (payment requests and statuses), InsurerFileInbox (insurer files), FileDropPort (shared drive), MarketingFeed and ClaimsFeed. The defaults are manual uploads, the in-app Disbursement queue and the in-system extract repository; no integration is simulated. Section 7 lists each interface and its status.

Work that a default adapter cannot complete alone (an OR or an unapplied item requested while Cashiering is not installed, a quotation for a TSI increase) becomes an open hand-off for the responsible team on Hand-offs and Extracts; the team closes it with what was done.

Preconditions

- None.

Main flow

- A module calls a port.
- The adapter sends or receives the data (upload, queue, repository).
- Failures are recorded and alerted (FR-OP-131).

Business rules

Rule	Statement	Kind	Maintained in
R1	Transports are adapters; a new transport does not change the modules.	Fixed	-

Validations and messages

Check	Message shown	Code
Hand-off already closed	The hand-off is already closed	HANDOFF_CLOSED

Notifications

- OPS_FLOW_IN_FAILED on failures.

Audit

- Every exchange is a flow-in run with its records, or a queue entry.

Acceptance criteria

1. A remittance approval creates a request in the Disbursement queue.
2. An extract for the shared drive is stored in the extract repository and downloadable.

Superseded by BRD-4 and BRD-5. BRQID.004 names Collection, Accounting, Disbursement, Marketing and Claims. BRD-4 makes Collections a BIBS module that implements CollectionFeed in-app; BRD-5 keeps the GL in BIBS and implements DisbursementGateway; Claims (BRD-7) implements ClaimsFeed. Marketing remains parked (OQ45).

FR-OP-131 Fetch data through flow-in feeds with runs, logs and alerts

BRD trace	BRQID.005 (p.18)	Actor	System Administrator (FLOWIN_MANAGE); System
Priority	Must have	Fit	NEW
Screens	Interfaces (feeds, runs, records, upload)	API	GET .../flow-in/feeds; PUT .../flow-in/feeds/{code}; POST .../flow-in/feeds/{code}/upload; GET .../flow-in/runs; GET .../flow-in/runs/{id}/records

Description

Each feed (section 7) has a partner system, direction, transport, schedule and active flag. Each run FIR-yyyy-n records the trigger, start and end, records read, accepted and failed, status and errors. Each record is accepted once by its idempotency key and payload hash, so a file uploaded twice creates no duplicates. A failed run or failed records raise the alert OPS_FLOW_IN_FAILED.

The administrator activates a feed, sets its schedule and uploads files for feeds with a handler, and reads the runs and records.

Preconditions

- The user has FLOWIN_MANAGE.

Main flow

1. The administrator uploads a file to a feed, or the schedule starts it.
2. BIBS validates and maps each record through the module's handler.
3. BIBS records the run and its records and alerts on failure.

Business rules

Rule	Statement	Kind	Maintained in
R1	One record per idempotency key.	Fixed	-
R2	Schedules per feed (Spring cron, UTC).	Configurable	Interfaces

Validations and messages

Check	Message shown	Code
Feed inactive	Feed <code> is inactive	FLOW_IN_FEED_INACTIVE
Feed without handler	No module processes uploads of feed <code> yet	FLOW_IN_NO_HANDLER
Record failed	<message>	FLOW_IN_RECORD_FAILED

Screens and fields: Interfaces (feed settings)

Field	Type	Mand.	Source / LOV	Validation
Schedule (Spring cron, UTC)	Text	No	-	Valid cron
Active	Check box	Yes	-	-
File	File	Cond.	-	For an upload

Notifications

- OPS_FLOW_IN_FAILED (in-app and e-mail) to the administrators.

Audit

- Runs and records are kept with their outcome.

Acceptance criteria

1. Uploading a hold file with one invalid row records a run with one failed record and raises OPS_FLOW_IN_FAILED.
2. Uploading the same hold file again accepts no new record.

FR-OP-132 Confirm payments to the New Business payment gate

BRD trace	CSHID.020 (p.40-41)	Actor	System
Priority	Must have	Fit	CHANGE
Screens	New Business placement (payment gate); Pre-booked Payments	API	placement PaymentConfirmationSource (source CASHIERING)

Description

Cashiering is the single payment intake. The placement payment sweep of New Business reads the Cashiering applications (APP:<id>) and the payments waiting in the pre-booked queue (PRE:<id>) of each account, so a payment received before booking opens the payment gate. Cashiering does not call placement.

Preconditions

- None.

Main flow

1. A payment is applied or queued as pre-booked.
2. The placement sweep reads it and marks the placement paid.

Business rules

Rule	Statement	Kind	Maintained in
R1	Each application or pre-booked payment is one confirmation.	Fixed	-

Notifications

- None.

Audit

- The placement keeps the evidence reference.

Acceptance criteria

1. A payment by ARN before booking opens the payment gate with evidence CASHIERING PRE:<id>.

5 Workflows and accounting events

5.1 Workflows

Operations uses ten workflows of the BIBS workflow engine. Each record page shows its workflow panel with the current stage, owner, SLA and the actions the user may take. Stage owners are notified on stage entry; the SLA hours are placeholders until BDOI states them.

Table 12: *Operations workflows*

Workflow	Record	Stages (initial to terminal)	FR

5.2 Workflow diagrams

In the figures, solid arrows are the main path, dashed arrows are returns and optional paths, and dotted arrows close a record without completing it. The second line of a stage is its owner.

5.2.1 Receipt cancellation and reinstatement (OPS_RECEIPT_ACTION)

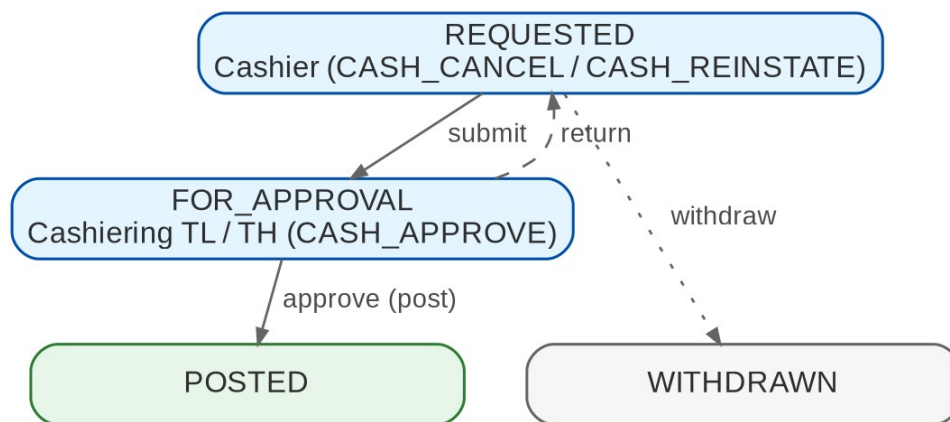

Figure 2: Workflow OPS_RECEIPT_ACTION (CSHID.001-005)

5.2.2 Unapplied payment disposition (OPS_DISPOSITION)

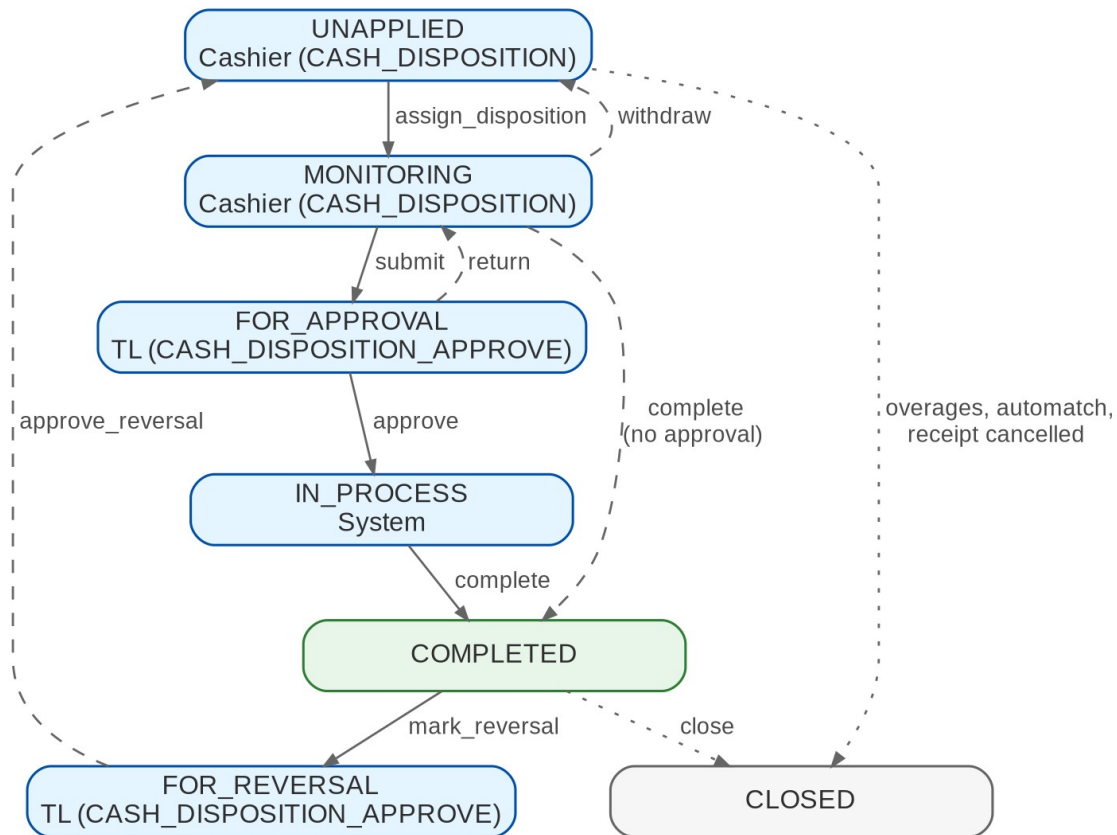

Figure 3: Workflow OPS_DISPOSITION (CSHID.024, 025)

5.2.3 BIR 2307 (OPS_CWT_2307)

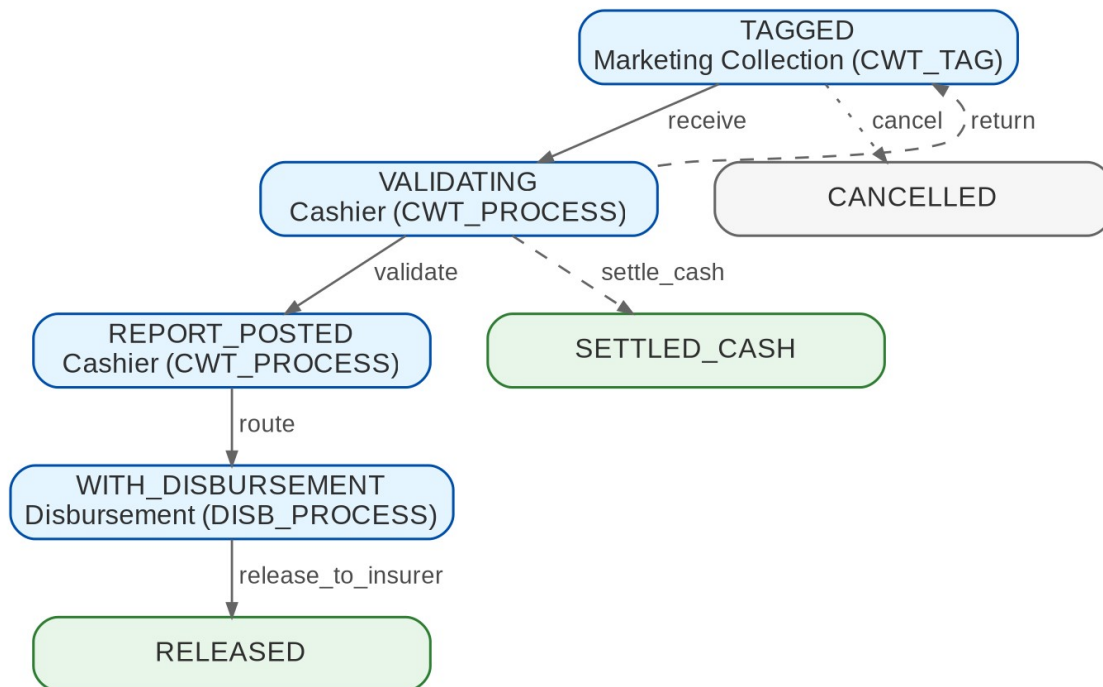

Figure 4: Workflow OPS_CWT_2307 (CSHID.026, 027; MKTID.010, 013; DBMID.001)

5.2.4 Remittance batch (OPS_REMITTANCE)

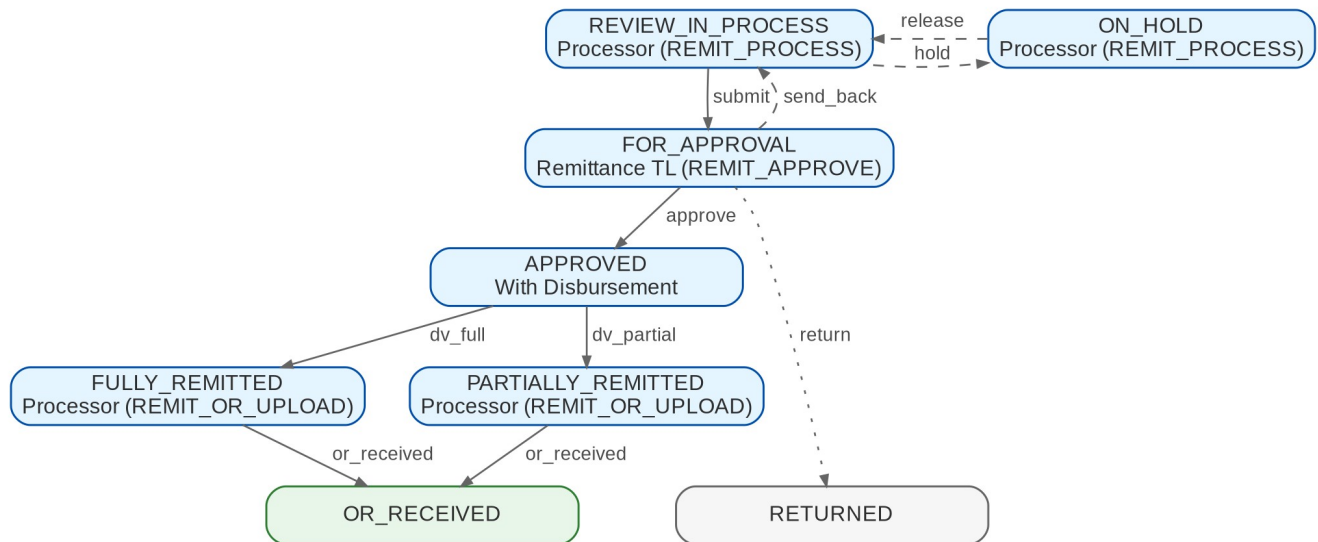

Figure 5: Workflow OPS_REMITTANCE (RMTID.009-011, 019, 029, 036)

5.2.5 Remittance hold (OPS_HOLD)

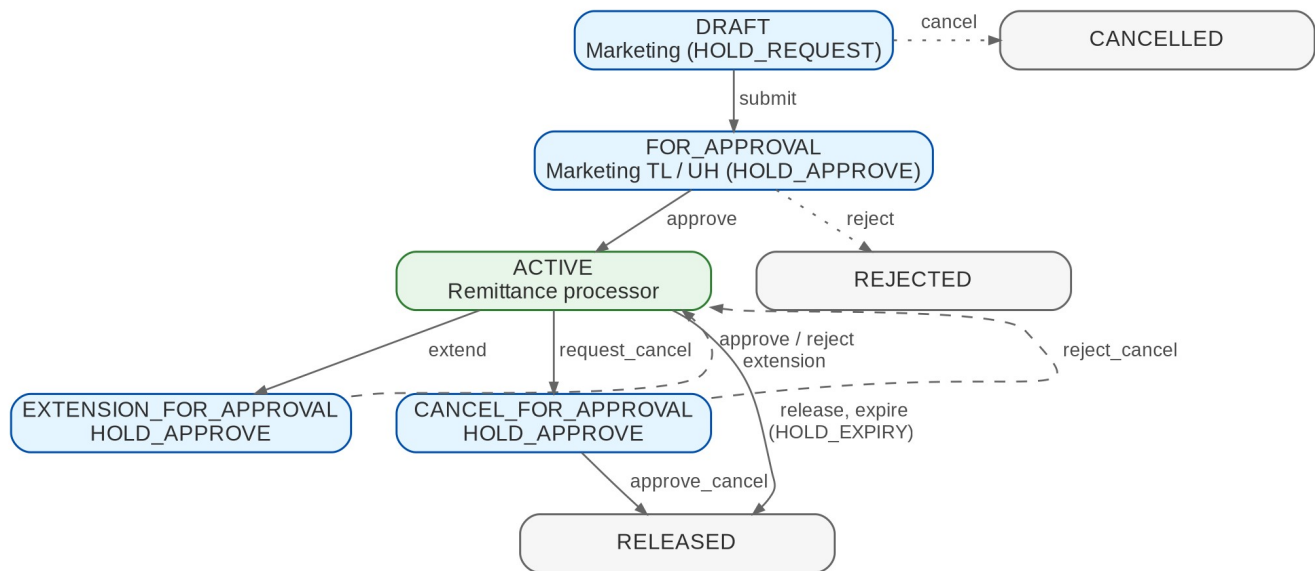

Figure 6: Workflow OPS_HOLD (MKTID.002-007, RMTID.021)

5.2.6 Special remittance (OPS_SPECIAL_REMIT)

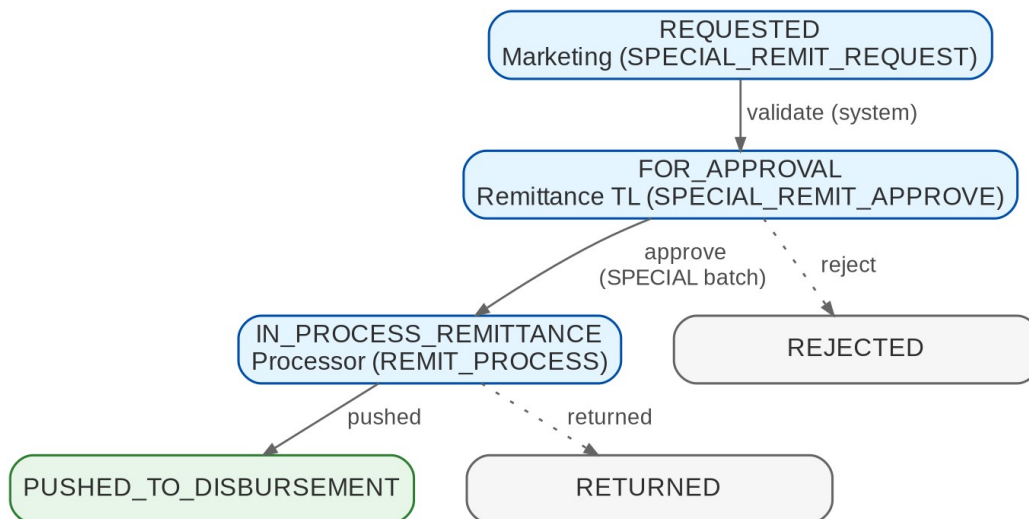

Figure 7: Workflow OPS_SPECIAL_REMIT (MKTID.009, RMTID.030, 033)

5.2.7 Reconciliation cycle (OPS_RECON)

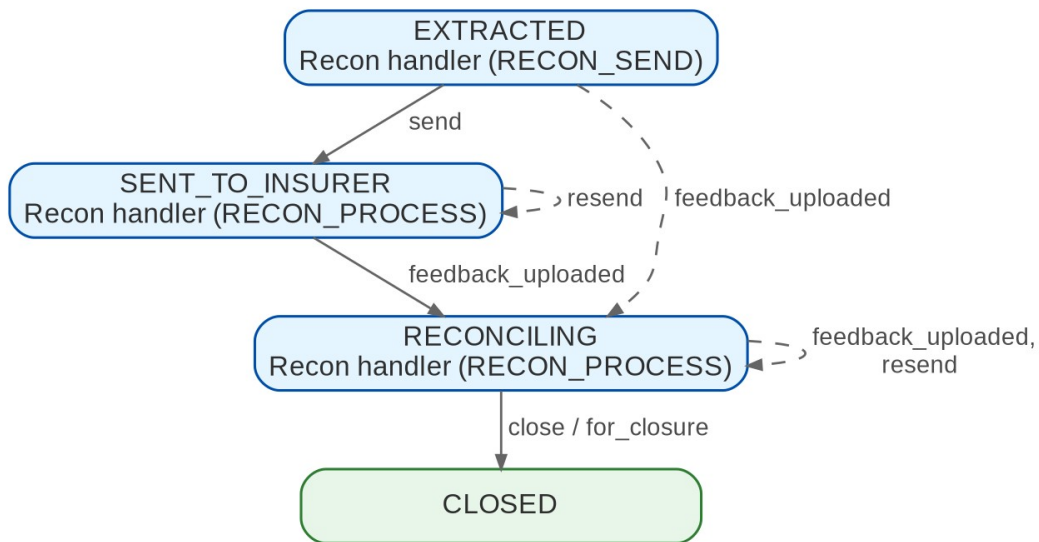

Figure 8: Workflow OPS_RECON (PRCID.001-039)

5.2.8 Endorsement request (OPS_ENDORSEMENT)

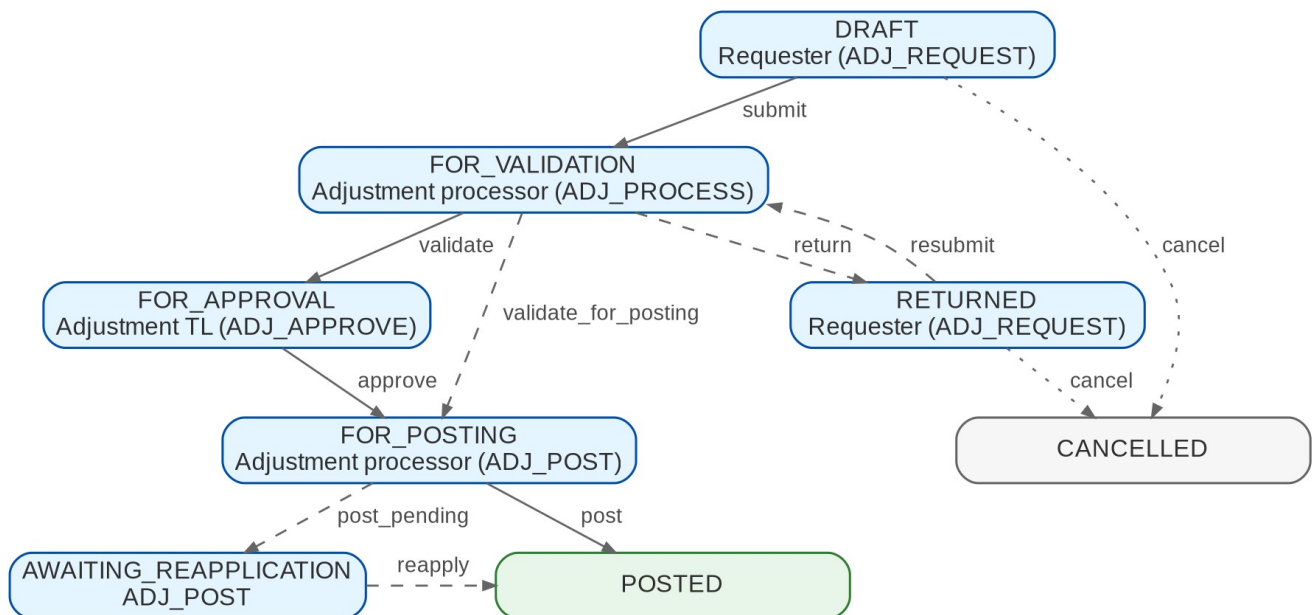

Figure 9: Workflow OPS_ENDORSEMENT (ADJID.001-010)

5.2.9 Direct payment billing (OPS_DP BILLING)

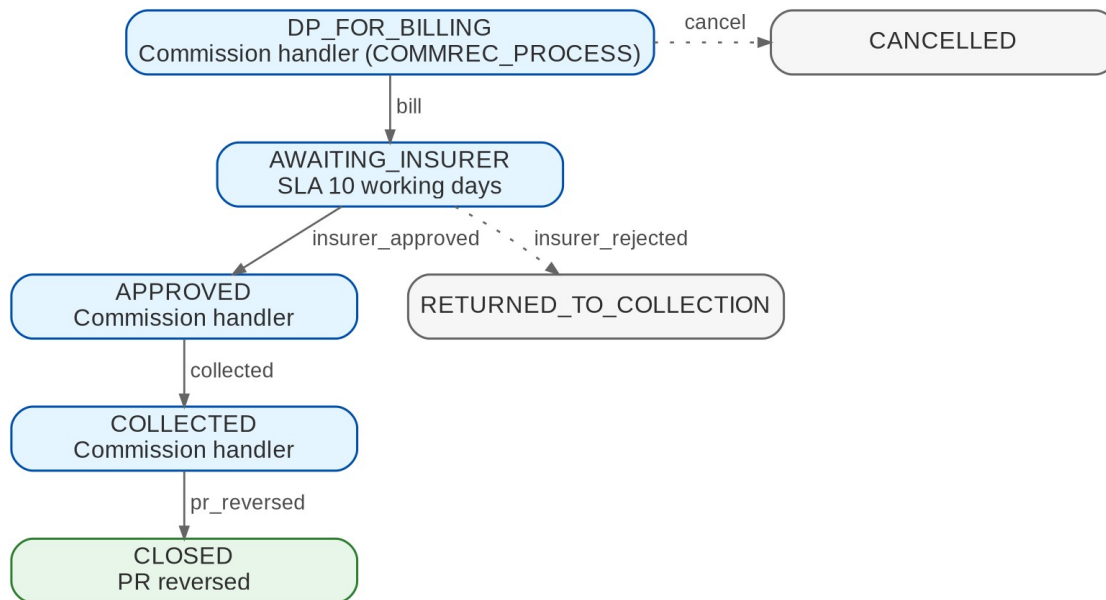

Figure 10: Workflow OPS_DP BILLING (CMRID.008-013)

5.2.10 BIR certificate submission (OPS_BIR_CERT)

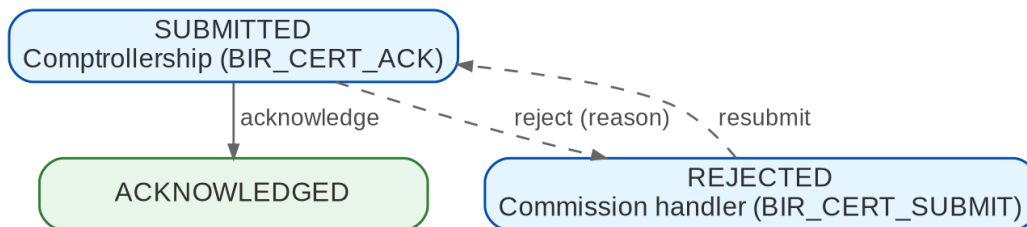

Figure 11: Workflow OPS_BIR_CERT (CMRID.015)

5.3 Accounting events

Every Operations posting is a business event; Comptrollership configures the GL rule of each event (maker-checker), and no GL account is chosen in code (OQ07). The entries below are the defaults of the build design with the demo chart of accounts. All events carry the party, cost centre and business line, and are priced at the BOOK rate when not in pesos.

Table 14: Operations accounting events and default entries

Event	Transaction	Default entry
OPS_AR_RECEIPT	AR issued (premium)	Dr bank / cash on hand / Cr unapplied collections (client)
OPS_PAYMENT_APPLY	Payment applied per component	Dr unapplied collections / Cr PR by component; commission realised on collection: Dr unrealised commission / Cr commission income, Dr deferred output VAT / Cr output VAT
OPS_CWT_RECLASS	2307 validated	Dr PR2307 / Cr PR by component
OPS_CWT_DTIP_OFFSET	2307 released to the insurer	Dr DTIP / Cr PR2307
OPS_EXCESS_TO_OVERAGES	Excess or unapplied <= 10.00	Dr unapplied collections / Cr AP overages

Event	Transaction	Default entry
OPS_MINIMAL_BALANCE_REVERSAL	PR <= 10.00	Dr minimal balance / write-off / Cr PR by component
OPS_UNAPPLIED_REFUND / OPS_UNAPPLIED_RECLASS	Refund / reclass or transfer	Dr unapplied collections / Cr refund payable; Dr unapplied (old) / Cr unapplied (new client or unit)
(reversal of the above)	AR or OR cancelled	Original events with negative amounts
OPS_RECEIPT_REINSTATE	Reinstatement	Dr bank / Cr unapplied collections, then OPS_PAYMENT_APPLY
OPS_AR_INSURANCE_RECEIPT	Insurer non-premium payment	Dr bank / Cr AR Insurer (insurer)
OPS_OR_ISSUE	OR (service fee, profit share, commission, incentive, others)	Dr bank, Dr CWT / Cr income by OR type, Cr output VAT; commission ORs make the deferred VAT due
OPS_REMITTANCE	Remittance batch approved, per invoice	Dr DTIP, Dr CWT / Cr commission receivable, Cr due to insurer for disbursement
OPS_REMIT_INCENTIVE	With Incentives batch	Dr due for disbursement / Cr incentive income, Cr output VAT
Booking endorsement posting	Financial endorsement or cancellation	Reversal or addition of the booking entry (booking's rules)
OPS_AR_INSURER_SETUP	Decrease after remittance	Dr AR Insurer / Cr DTIP (insurer)
OPS_ADJ_COMMISSION	Commission change without premium change	Dr commission receivable / Cr unrealised commission, Cr deferred output VAT (negative reverses)
OPS_WRITE_OFF	Minimal balance file	Debit balance: Dr write-off / Cr PR; credit balance: Dr PR / Cr other income
OPS_DP_PR_REVERSAL / OPS_DP_REINSTATE	DP premium receivable reversal / reinstatement	Dr DTIP / Cr PR by component (reinstatement reverses); posted only when DP_PR_REVERSAL_POSTING is on
OPS_DP_COMMISSION_COLLECT	DP commission collected	Dr bank, Dr CWT / Cr commission receivable; realisation of commission and output VAT
OPS_INCENTIVE_ACCRUE	Target incentive earned	Dr incentive receivable / Cr incentive income
OPS_INCENTIVE_PASS_ON	Motor Mania pass-on to branches	Dr incentive income / Cr due to branches, then Disbursement

6 Reports and documents

All Operations reports are in the report category Operations, need OPS_REPORT_VIEW to view and OPS_REPORT_EXPORT to download or print, export to PDF, XLSX and CSV, and are archived when run (FR-OP-009). "Draft" marks a layout the BRD does not give; BDOI confirms it through OQ42.

6.1 Cashiering reports

Table 15: *Cashiering reports (Annex II, p.125-127)*

Code	Name	Content
CSH-APPLIED-PREM	Applied Premium Report	AR no., date, amount paid, invoice no., payor / client, risk code, count, total (Annex II #1)
CSH-APPLIED-COMM	Applied Commission Report	OR no., invoice no., applied invoices, insurer, basic commission, WTAX, EVAT, net commission, total applied (#2)
CSH-PDC-WAREHOUSE	Post-dated Checks Warehousing	AR date, AR no., maturity date, client, amount, bank code, branch, check no., market segment (#3)
CSH-MINBAL-EXCESS	Minimal Balance of Unapplied Payments (Excess Payments)	AR no., AR date, market unit, section unit, minimal amount, count, total (#4)
CSH-CANCELLED-OR	Cancelled Official Receipts	Date issued, OR no., assured, gross, VAT, WTAX, amount, total (#5)
CSH-CANCELLED-AR	Cancelled Acknowledgment Receipts	Date issued, reason, AR no., assured, gross, VAT, WTAX, amount, total (#6)
CSH-CHECK-PICKUP	Check Pick-Up Requests	Date and time of request, AR no., date issued, amount, assured, collections handler / requestor, count, total (#7)
CSH-PRIORITY-POSTED	Priority Posted Accounts	OR no., payor, amount paid, date paid, encoder, branch, status, invoice, policy, risk code, corporate department (#8)
CSH-UNAPPLIED-COMM-MANCOM	Unapplied Commission Receivable Extract for Mancom	Draft (#9)
CSH-UNAPPLIED-COMM-YTD	Unapplied Commission Receivable YTD Balance	Draft (#10)
CSH-MINBAL-PREMIUM / CSH-MINBAL-COMMISSION	Premium / Commission Minimal Balance	Draft (#11, #12)
CSH-DAILY-CASH-REC	Daily Cash Reconciliation	Draft (#13)
CSH-ADVANCE-PAYMENT	Advance Payment Transactions (Auto-Credit)	Draft (#14)
CSH-PAYMENT-REVERSAL	Payment Reversals	Draft (#15)
CSH-DIRECT-PAYMENT	Direct Payment Accounts	Draft (#16)
CSH-REINSTATEMENT-MON / CSH-REINSTATEMENT	Reinstatement Monitoring / Reinstatements	Draft (#17, #20)
CSH-REAPPLICATION	Re-Application	Draft (#18)
CSH-CERT-OF-PAYMENT	Certification of Payment	AR no., policy no., requesting market unit, date issued, count (#19); also a PDF certificate
CSH-CWT	CWT	Draft (#21)
CSH-AR-OUTSTANDING	AR Outstanding with Ageing	Outstanding premium per client and invoice with ageing buckets (OQ43)
CSH-BATCH-RUN	Payment Batch Run Report	Successful, unsuccessful, applied, unapplied and failed records of a run (BRQID.006)

Code	Name	Content
CSH-2307-TXN	BIR 2307 Transaction Report	Tags of a 2307 batch per insurer with amounts and certificates (CSHID.027)

6.2 Remittance reports

Table 16: *Remittance reports (Annex III, p.127-129)*

Code	Name	Content
REM-TRACKER	Remittance Tracker	Insurer, remit type, batch no., accounts extracted, net due, incentive amount, due date (#1)
REM-SPECIAL-REGISTER	Special Remittance Register	Invoice, policy, insurer, assured, reason, processor, requestor, segment, date posted, date pushed to Disbursement, processed / checking / approval age (#2)
REM-SCHEDULE-NORMAL	Remittance Schedule Normal	Invoice, policy, endorsement, with COI, assured, risk code, record status, dates, OR delivery, paid AR, realised commission and VAT, WTAX, DTIP, net due, OR date / no. / amount; Mall Assurance columns draft (#3)
REM-SCHEDULE-SPECIAL	Remittance Schedule Special	As Normal without Mall Assurance (#4)
REM-DTIP-SUMMARY	DTIP Status Report - Summary	Insurer, no. of accounts, amount, remittance status (#5)
REM-DTIP-DETAIL	DTIP Status Report - Detailed	Invoice, assured, inception, expiry, insurer, risk code, product, basic premium, AR paid, for remittance, commission and CAT collected, last remittance and payment, ageing, outstanding DTIP and RA, uncollected commission and VAT (#6)
REM-SCHEDULE-INCENTIVE	Remittance Schedule with Incentives	As Normal with date of incentive expiry, net due before incentives, basic premium (#7)
REM-REMITTED-BATCH	List of Remitted Accounts with Batch Number	Draft (#8)
REM-PAIDAR-OVER-DTIP	Paid AR Higher than DTIP Balance	Invoice, insurer, paid AR, DTIP, excluded (RMTID.015)
REM-OR-EXCEPTION	OR vs Paid PR Exception Report	Reference, OR amount, paid PR, status, reason, summary per upload (RMTID.016)
REM-EXCLUDED	Accounts Excluded from Remittance	Invoices excluded by hold, pending negative adjustment and the other rules (RMTID.020)
REM-HOLD	Remittance Hold Register	Holds with status, dates and processor (MKTID.002-007)

6.3 Adjustment reports

Table 17: *Adjustment reports*

Code	Name	Content
ADJ-DAILY	Adjustment and Daily Endorsement Report	Requests raised or posted in the period by type and user; exported daily (ADJID.016)
ADJ-VALIDATION-LIST	Validation List	One row per GL line of posted requests with the BRD fields (ADJID.017)
ADJ-REGISTER	Adjustment Report	Type, amount, reason by account, segment, AO and risk type (ADJID.019)
ADJ-AGING	Transaction Aging	Requests with ageing buckets from request to completion (ADJID.021)
ADJ-MINBAL-FILE	Minimal Balance Write-off Summary	Invoices written off or credited per file (ADJID.026)

6.4 Production Reconciliation reports

Table 18: *Production Reconciliation reports (Annex IV, p.129-130)*

Code	Name	Content
PRC-SUMMARY	Production Reconciliation Summary	Insurer, matched items and amount, matched with discrepancies items and amount, unmatched items and amount, remarks (#1)
PRC-UNMATCHED-LOC	Unmatched Accounts per Location	Insurer, disposition, location, items, amount (#2)
PRC-UNMATCHED-AO	Unmatched Accounts per Marketing AO / AB	Insurer, disposition, items, amount; booked and pre-booked (#3)
PRC-DISPOSITION	Summary per Disposition	Disposition, insurer, Marketing AO / AB, items, amount (#4)
PRC-REGISTER	Production Register	Annex IV #5 columns; variants plain, insurer feedback, Marketing feedback, both (PRCID.017, 018, 020)
PRC-UNBOOKED	Unbooked Accounts and Status	Insurer-only lines with their status (PRCID.019, 033)
PRC-EXTRACT-LOG	Production Register Extraction Log	Item count and extraction time per extract (PRCID.034)
PRC-UNMATCHED-FEEDBACK	Unmatched Accounts with Feedback and Disposition	Company concerned, instruction, feedback, disposition (PRCID.038)
PRC-EARLY-INCENTIVE	Early Incentive Validation	Account, rule, rate, window, remittance date, result (PRCID.028)

6.5 Commission Receivables reports

Table 19: *Commission Receivables reports*

Code	Name	Content
CMR-COMMISSION-RECEIVABLE	Commission Receivable - Direct Payment vs Regular	Commission booked, collected and outstanding per insurer; DP / direct bill against regular; net after partial remittances (CMRID.004)
CMR-PRODUCTION-YEARLY	Production per Branch and Insurer - Yearly	Total production and commission per branch and insurer, estimated items (CMRID.014)
CMR-DP-STATUS	Direct Payment Accounts per Status	DP accounts by tag (CMRID.008)
CMR-INCENTIVE	Incentive Runs	Runs ending in the period with the incentive per invoice and exclusions (CMRID.005, 006)
CMR-FEEDBACK-SLA	Insurer Feedback Timeline	Billings with sent date, due date and answer date (CMRID.011)
CMR-BIR-CERT	BIR Certificate Submissions	Certificates with their ORs and status (CMRID.010, 015)

6.6 Documents

Table 20: *Operations documents*

Document	Output	Content
Acknowledgement Receipt / Official Receipt	PDF	Receipt number, date, payor, amount in words and figures, mode, invoice lines; OR with gross, VAT and WTAX (draft layout, OQ42)
Certification of Payment	PDF	AR, policy, requesting unit, date
REMITTANCE_SCHEDULE	PDF and XLSX	Batch, insurer, type, lines and totals (Annex III #3, #4, #7)

Document	Output	Content
REMITTANCE_PAYMENT_REQUEST	PDF	Payable, insurer, batch, approver
Production register	XLSX, protected	Annex IV #5 columns; Remarks and Incentive editable
PRODRECON_COVER_LETTER	E-mail	Insurer, extract, period, row count, instructions
DP billing workbook	XLSX, protected	Accounts with premium, commission, VAT, WTAX, net
ENDORSEMENT_SLIP	PDF	Annex V fields, number ES-yyyy-n
VALIDATION_SLIP	PDF	Validation status, before / after, insurer breakdown, GL entries
BIR 2307 transaction report	PDF	Tags of a batch per insurer

7 Interfaces and integration

Figure 12 shows the interfaces of Operations. The modules exchange data only through the invoice ledger, its events and its ports; each external system is behind a port whose default adapter is an upload, the in-app Disbursement queue or the extract repository.

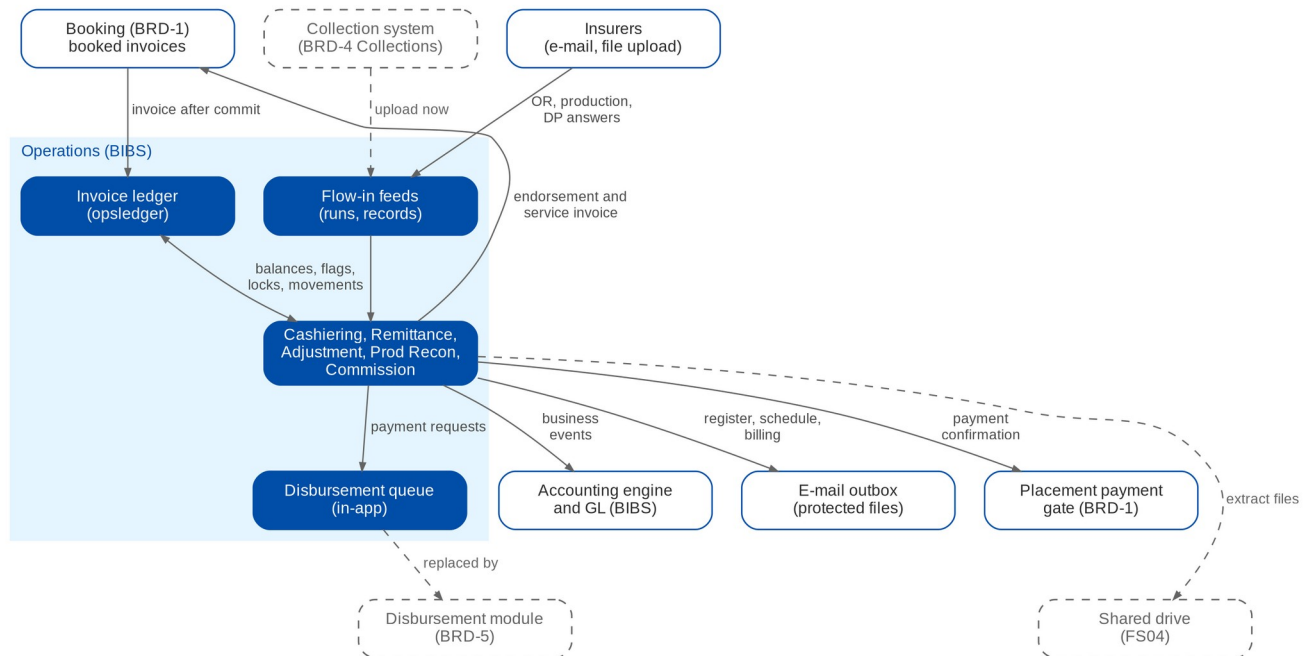

Figure 12: Interfaces of Operations (dashed = parked or replaced by a later BRD)

Table 21: Interfaces and flow-in feeds

Interface / feed	Direction	Content and trigger	BRD	Status
OPS_INVOICE_FEED (booking)	In	Booked invoices, endorsements and returns after commit; replay	RMTID.038	BUILT
Booking posting and service invoice	Out	Endorsement and cancellation posting; service invoice issue and credit	ADJID.011, 014	BUILT
Catalogue	In	Endorsement rating, commission rates, package limits	ADJID.008, 014	BUILT
Placement payment gate	Out	Applications and pre-booked payments per ARN	CSHID.020	BUILT
Accounting engine	Out	Business events of section 5.3	CSHID.012-014; ADJID.011	BUILT
E-mail outbox	Out	Protected register, schedule, billing; passwords separately	PRCID.007, 008; MKTID.001; CMRID.009	BUILT
INSURER_REMIT_OR	In (upload)	Insurer OR schedules	RMTID.012, 013	BUILT
INSURER_PRODUCTION	In (upload)	Insurer production reports	PRCID.009, 022	BUILT
INSURER_DP_RESPONSE	In (upload)	Insurer answers to DP billings	CMRID.009	BUILT
COLLECTION_CHECK_PICKUP	In (upload)	Checks for pick-up	CSHID.009	SUPERSEDED
COLLECTION_CWT2307	In (upload)	BIR 2307 tags	CSHID.026; MKTID.013	SUPERSEDED

Interface / feed	Direction	Content and trigger	BRD	Status
COLLECTION_COMMISSION_PAYMENT	In (upload)	Commission payment details	CSHID.007	BUILT
COLLECTION_HOLD	In (upload)	Hold requests	RMTID.021; MKTID.003	BUILT
COLLECTION_SPECIAL_REMIT	In (upload)	Special remittance requests	RMTID.030; MKTID.009	BUILT
COLLECTION_DP_LIST	In (upload)	DP lists of HO and branches	CMRID.001	SUPERSEDED
COLLECTION_DP_RETURNED, COLLECTION_REFUND	Out	Rejected DP accounts; refunds	CMRID.009; CSHID.024	BUILT
DISBURSEMENT_REQUEST / _STATUS	Out / In	Payment requests; DV and status (in-app queue)	RMTID.034; DBMID.001	SUPERSEDED
Shared drive (FileDropPort)	Out	Extract files	RMTID.001; PRCID.005	PARKED
MarketingFeed, ClaimsFeed	In	Marketing data; claims for special remittance	BRQID.004; MKTID.009	PARKED

SUPERSEDED means built as a seam in Operations, with the replacement designed in BRD-4 Collections or BRD-5 Accounting and Disbursement (R4). PARKED means the transport waits for BDOI's specification (OQ17, OQ45, OQ46).

Parked transports. Insurer SFTP / portal channels, BDO bank file transports (FS01 / FS04) and the shared drive are not specified in the BRD (OQ03, OQ17, OQ22, OQ29). Adding a transport is a new adapter of the existing port, with no change to the modules.

8 Non-functional requirements

Table 22: Non-functional requirements (BRD annex p.115-120)

Topic	BRD value	BIBS target and approach	Status
Users	Cashiering HO 11 + branches 5, TL / TH 5 + 5; Remittance 4; Prod Recon 4; Adjustment 6; Commission 5 + 4 + 2	Within the BRD-1 sizing (145 concurrent); Operations adds fewer than 50 users	FIT
Volumes and growth	Not stated	Assumed within the BRD-1 sizing; to confirm (OQ44)	OPEN
Response time	Under 5 seconds for every function; section navigation under 5 s; batch print of 50 documents under 10 s	Online p95 under 3 seconds; extraction, matching, uploads and batch print run as background jobs with progress	FIT
Peak	15th and 30th (Cashiering, Remittance); 1st-2nd week (Prod Recon); Q4 (Adjustment, Commission); 07:30-18:00	Remittance extraction at 20:00 PHT and the minimal balance sweep at 04:00 PHT, outside the peak hours; the other jobs in section 9.3	FIT
Availability	99.9%; use 07:00-18:30 (07:30-18:00 Adjustment / Commission); maintenance per bank standard	Same deployment as BRD-1 (window 07:00-22:00 governs, OQ44)	FIT
Recovery	RTO 4 hours, RPO 24 hours	Platform backup and recovery; one BIBS-wide NFR set being agreed (XQ08)	FIT
Retention	Application, database, audit logs and history 5 years online, 15 years archive; backup every 4 hours kept 7 years	BRD-1 retention framework with backup retention 7 years	OPEN
Anonymisation	No	None	FIT
Devices	Same performance on mobile and desktop	Responsive screens	FIT
Security	Authorised users only; protected files	Role-based access, four-eyes rules, protected e-mails (FR-OP-002, 013, 035)	FIT
Audit	All actions logged	Append-only audit, workflow history, ledger movements (FR-OP-004, 024)	FIT

9 Configuration items owned by the System Administrator

The items below are changed in BIBS without a release. Changes to parameters and lists are audited.

9.1 Parameters

Table 23: Operations parameters

Parameter	Default	Meaning
REMIT_CHECK_HOLD_DAYS	3	Banking days a check is held before its payment is remitted (RMTID.017)
REMIT_PAIDAR_OVER_DTIP_MODE	EXCLUDE	EXCLUDE or CAP an invoice whose paid AR exceeds the DTIP (RMTID.014, OQ19)
REMIT_FILE_PATTERN	(blank)	File naming of remittance extracts (OQ17)
RECON_TOLERANCE	1.00	Reconciliation tolerance per amount field (PRCID.026)
RECON_MATCH_KEYS	INVOICE_NO, POLICY_NO	Keys pairing insurer lines with booked lines (OQ30)
PRODRECON_FILE_PATTERN	(blank = <INSURER>_PRODREG_<yyyyMM>_<seq>)	File naming of the production register (PRCID.004)
MIN_BALANCE_AUTO_MAX	10.00	Minimal balances reversed automatically (CSHID.016)
MIN_BALANCE_FILE_RANGE	10.00-100.00	Range of the minimal balance file (ADJID.026)
CWT_APPLICATION_PERCENT	98	Share of premium applied for 2% CWT clients (CSHID.020)
CMR_FEEDBACK_WORKING_DAYS	10	Working days for the insurer's DP answer (CMRID.011)
CMR_DP_COLLECTION_BANK	(blank)	Proposed bank account of DP commission collections
DP_PR_REVERSAL_POSTING	false	Post the GL entry of the DP PR reversal (MKTID.012)
ADJ_BASELINE_PERCENT	100	Over-adjustment baseline (ADJID.028)
OPS_BOOK_RATE_TYPE	BOOK	Exchange rate type of Operations postings (CSHID.012)
OPS_COMMISSION_REALIZATION	ON_COLLECTION	When commission is realised (seeded by booking)
CASH_BANK_ACCOUNT / CASH_ON_HAND_ACCOUNT	(blank)	GL accounts of the @BANK role (OQ07)

9.2 Lists of values

Table 24: Lists of values

List	Values delivered
AR_CLASS	Premium: Bills Payment; OTC; Trade; CLPC; PDC; Direct Credit. Non-premium: Refund; Other expenses; AR Insurance
OR_TYPE	Service Fee Income; Insurance Profit Share; Commissions (with VAT / withholding tax); Incentives; Others (discount)
RECEIPT_CANCEL_REASON	Premium: Discrepancy in check amount; No signature; Incorrect payee; Check not picked-up; Incorrect check details provided by the client or Insurer; Others. Commission: Incorrect payment details; Negative VAT; Discount not applied. PDC: retrieval / replacement - for replacement; pull out. General: Bounced or returned check; Error in issuance details; Error printing; Check not picked up; Double issuance; Others

List	Values delivered
REINSTATEMENT_REASON	Premium: Due to cancellation; Mis-application of payment; Withholding tax adjustment; Others. Direct payment: Due to double reversal; Due to wrong details of OR; Withholding tax adjustment; Due to cancellation; Others
DISPOSITION_TYPE	Apply to other invoice; DST payment application; Refund; Reclass; Transfer to other marketing unit; Others (customizable)
REMITTANCE_TYPE	With Incentives; Normal - Dollar; Normal - Peso
REMIT_EXCLUSION_REASON	Account on hold; Pending negative adjustment; Written off; Check within the holding period or not cleared; Paid AR greater than DTIP; Payment not yet applied and posted; Others
REMIT_RETURN_REASON, HOLD_REASON, DP_FEEDBACK_REASON, ENDORSEMENT_DOC_TYPE	Others only, until BDOI supplies the values (OQ24, OQ32, OQ40)
SPECIAL_REMIT_CONDITION	Claims; Renewal; Installment due; Immediate OR issuance
RECON_COMPANY_CONCERNED, RECON_DISPOSITION	Demo values until BDOI supplies them (OQ31)
ENDORSEMENT_TYPE	Financial: 8 types; non-financial: 5 types; internal adjustment (ADJID.002, 004)
ENDORSEMENT_REQUEST_TYPE	The 12 request types of Annex V
CANCELLATION_REASON	The 33 reasons of Annex V (shared with BRD-1)
ADJ_RETURN_REASON	Not qualified for posting; Incomplete supporting documents; Incorrect request details; Incorrect amounts; Duplicate request; Others
INCENTIVE_EXCLUSION_RULE	Negative production amounts; Erroneous bookings
OPS_EXTERNAL_LINK	Empty; links "Name"

9.3 Jobs

Table 25: Operations jobs (times in PHT)

Job	Default	Purpose
OPS_INVOICE_FEED_REPLAY	Manual	Rebuild or replay the invoice ledger from booking
PREBOOKED_REMATCH	Every 2 hours	Apply pre-booked payments of accounts now booked
PAYMENT_AUTOMATCH	Hourly	Match unapplied payments again
PDC_MATURITY	08:30 (00:30 UTC)	Turn matured PDCs into payments
MINIMAL_BALANCE_SWEEP	04:00 (20:00 UTC)	Minimal balance reversal and overages
REMITTANCE_EXTRACTION	20:00	Scheduled remittance extraction
HOLD_EXPIRY	08:15	Release expired holds; notify holds expiring the next day
PRODUCTION_EXTRACT	09:00	Extract registers of insurers due
RECON_AUTOMATCH	Manual	Match open cycles again (OQ30)
ADJ_DAILY_REPORT	18:00	Archive the daily endorsement report
DP_FEEDBACK_SLA	09:30	Flag overdue insurer answers

9.4 Masters and rules maintained by the business

Table 26: Masters and rules

Item	Maintained by (authorised by)	FR
Receipt series	Cashiering TL (another CASH_SERIES_MANAGE holder)	FR-OP-010

Item	Maintained by (authorised by)	FR
Payment file layouts, minimal balance rules	Cashiering TL	FR-OP-015, 023
Disposition type rules (action, approval)	System Administrator (change request until OQ15)	FR-OP-022
Early remittance incentive rules	Remittance TL	FR-OP-038
Extract schedules	Recon Handler	FR-OP-070
Incentive schemes and tiers	Commission TL	FR-OP-095
Accounting rules of the Operations events	Comptrollership (maker-checker)	FR-OP-027
Flow-in feeds (schedule, active)	System Administrator	FR-OP-131
Roles and permissions	Business Administrator via access request (BRD-11)	FR-OP-002

10 Assumptions, dependencies and open questions

10.1 Assumptions

Table 27: Assumptions

ID	Assumption	Related
A-OP-01	The main BRD (pp.8-132) and Addendum 1 (pp.1-7) are the baseline; the addendum governs RMTID.002 and ADJID.014	R1, R2
A-OP-02	Every Operations function starts from the invoice booked by BRD-1; Operations does not book	RMTID.038
A-OP-03	GL accounts stay in BIBS; Comptrollership configures the rules of the Operations events	OQ07 (BRD-5)
A-OP-04	Cancellations, reinstatements, refunds, reclasses and transfers need a TL approval	OQ06, OQ15
A-OP-05	Cashiering is the single payment intake; New Business placement consumes its result	OQ12
A-OP-06	Paid AR above DTIP is excluded from extraction until BDOI decides	OQ19
A-OP-07	Remittance batches are per lead insurer for co-insured invoices	OQ50
A-OP-08	The MKTID activities are performed in BIBS by Marketing users as described in section 4.7	OQ45

10.2 Dependencies

Table 28: Dependencies

ID	Dependency	Needed for
D-OP-01	BDOI provides the bank and channel file layouts (FS01, FS04, CLPC, PDC)	FR-OP-015 (OQ03, OQ04)
D-OP-02	BDOI provides the BIR ATP series and formats	FR-OP-010 (OQ05)
D-OP-03	Comptrollership provides the GL accounts and the BOOK rate source	FR-OP-027 (OQ07, OQ08)
D-OP-04	BRD-4 Collections delivers the in-app Collection feed; BRD-5 delivers the Disbursement module	Section 7 (OQ01, OQ02)
D-OP-05	BDOI gives the incentive schemes (targets, tiers, amounts) and the early remittance rates	FR-OP-038, 095 (OQ23, OQ39)
D-OP-06	BDOI gives the report layouts not in the annex	Section 6 (OQ42)
D-OP-07	The e-mail relay of the BIBS environment is available for insurer e-mails	FR-OP-073, 092, 110

10.3 Open questions

Table 29: Open questions on BRD-2 (status from R3 and the cross-BRD decisions, R7)

ID	Question	Affects	Status
OQ01	Systems of BRQID.004 (Collection, Accounting, Disbursement, Marketing, Claims): interface, data, frequency	FR-OP-130	PARTIAL
OQ02	Disbursement: payload, DV numbers and statuses	FR-OP-120	ANSWERED

11 Traceability

Every BRD-2 requirement ID (169) is met by at least one FR. The page is the page of the BRD-2 PDF ("add." = Addendum 1). The build status comes from the requirements traceability (R4): BUILT = built and tested; SEAM = built and tested, with a value, layout or integration BDOI has not given kept as a seam; SUPERSEDED = built as a seam, with the replacement designed in BRD-4 or BRD-5. API paths start with /api/v1.

11.1 General requirements (BRQID)

11.8 Coverage summary

Table 37: BRD-2 requirement IDs covered

Family	IDs	BUILT	SEAM	SUPERSEDED	Covered
BRQID	6	4	1	1	6
CSHID	27	8	18	1	27
DBMID	1	0	0	1	1
RMTID	40	18	21	1	40
MKTID	13	3	7	3	13

Family	IDs	BUILT	SEAM	SUPERSEDED	Covered
PRCID	39	15	24	0	39
ADJID	28	20	8	0	28
CMRID	15	7	7	1	15
Total	169	75	86	8	169

The non-functional requirements of the BRD annex (p.115-120) are traced in section 8.

12 Sign-off

By signing, BDOI confirms that this FRS describes the Operations functions it expects in BIBS, and accepts the assumptions in section 10.1 and the differences recorded in section 1.6. Open questions in section 10.3 stay open; their answers are applied as configuration or through a change request.
