Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
March 3, 2026	1.0	Case Management Initial Version Discussion with BU and IT SA	Zean C. Ibay
March 5, 2026	1.0	Updated as per comments during the call. Sending copy as final for review.	Zean C. Ibay
March 26, 2026	1.0	Updated BRD Addendum to show that every “Before” item has a clear, traceable “After” counterpart, satisfying BRD completeness. Updated BRCSFCM.006 as based on the agreed requirement and discussion to ensure that audit logs capture what changed, who changed it, and when. BRCSFCM.008 and BRCSFCM.011 - Clarified where the metrics are surfaced (dashboard), explicit linkage between reports and dashboards, reinforces dashboards as views, not a separate system or feature.	Zean C. Ibay

Purpose of the Addendum

This Addendum documents Case Management requirements identified during the Core Modernization discussions that are not covered in the approved CSF BRD. The intent is to formally define the scope, business objectives, and functional requirements for a Case Management module within CSF, while preserving the original CSF scope.

Business Needs and Requirements

I. Executive Summary (What do you need?)

The business requires the introduction of a Case Management capability within the Customer Servicing Facility (CSF) to enable structured logging, tracking, and resolution of customer inquiries, requests, problem and complaints.

At present, customer cases are tracked in Microsoft SharePoint which is an interim solution to the business unit's case management solution requirement. The Case Management module will provide a centralized, auditable, and integrated mechanism for managing customer cases, aligned with CSF's servicing mandate and the Core Modernization target state.

II. Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement *(attach the related law being addressed)*
- ☐ Customer Experience
- ☒ Others:
 1. Establish a single system of record for customer service cases within CSF.
 2. Ensure consistent tracking, follow-ups, and resolution of customer inquiries.
 3. Eliminate reliance on parallel manual tracking tools.
 4. Improve accountability through defined case ownership and audit trails.
 5. Enable management visibility through standardized case reporting.

b. Benefits

1. Improved customer experience through timely and consistent resolution.
2. Reduced operational risk from lost or untracked inquiries.

3. Better workload management and transparency.
4. Stronger auditability and compliance readiness.
5. Alignment with Core Modernization and enterprise servicing standards.
6. Increased efficiency of contact center agents with the use of a single system.

III. What is the current process? (Before)

1. Customer inquiries are received via hotline, email, and web channels.
2. Cases are logged manually in SharePoint or offline trackers.
3. Follow-ups depend on individual agents.
4. Limited reporting and performance visibility.
5. Majority of cases discussed are retail-related, with many tied to policy renewals.
6. Client servicing and routing typically flow through business units and assigned account officers, depending on market segment.

IV. What is the envisioned process? (After)

1. All customer inquiries are logged as Cases within CSF. Regardless of entry channel, inquiries are captured as formal case records in a single system of record.
2. Each case has a unique Case ID, defined case type/category with corresponding turn-around-time, nature of transaction product type, market segment and fulfillment unit.
3. Cases follow a standardized lifecycle from creation to closure. (Open/In Progress/Pending/Escalated/Closed) with SLA tracking, escalation rules, and supervisor oversight.
4. Supervisors and Management have real-time visibility into case volume, aging, and performance metrics via system views and reports. Dashboard to ensure visibility of case volume, aging, SLA status, and overall case performance to support monitoring, workload management, and timely decision-making.
5. Case categorization captures market segment and transaction nature, enabling renewals and retail cases to be explicitly tagged, tracked, and reported.
6. Routing is system-driven based on case category, market segment, and fulfillment unit, while still reflecting BU/AO ownership rules

V. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1. #)

Business Requirements					
BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCSECM.001	1	BDO Contact Agent	Log a customer's transaction as a case	1. Case is created successfully upon submission. 2. A unique Case ID is automatically generated. 3. Case is linked to the correct customer and account. 4. Mandatory fields (channel, case type, nature of transaction, product type, market segment and fulfillment unit) are validated before creation. 5. System prevents duplicate case creation for the same transaction, where applicable. 6. Case creation date/time and creator are captured in the audit trail. 7. Notifications shall be sent to appropriate recipients. The notification will contain the necessary information about the created / logged case. (e.g. case ID, policy number).	Must Have
BRCSECM.002	2	BDO Contact Agent	Categorize the case (e.g., inquiry, request, complaint)	1. Agent can select a case type/category from predefined values. 2. Selected category is saved and displayed on the case record. 3. Category drives downstream handling rules (e.g., routing, SLA). 4. Category can be updated only by authorized users. 5. Category changes are logged with timestamp and user ID.	Must Have
BRCSECM.003	3	System	Manage case lifecycle statuses (Open - With fulfillment unit, Closed by fulfillment unit, Closed by CSR, Open - Returned to Agent and Open – CSR Action Required)	1. Case status transitions follow predefined lifecycle rules. 2. Current case status is clearly visible at all times. 3. Status changes are automatically timestamped. 4. Invalid status transitions are prevented by the system.	Must Have

Strictly Confidential and for Internal Use of BDO only

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				5. All status changes are logged and traceable for audit purposes.	
BRCFSFCM.004	4	BDO Contact Agent	Insure/ Add notes and updates to a case Center	1. Agents can add notes and updates throughout the case lifecycle. 2. Notes are displayed in chronological order. 3. Each note captures author, date, and time. 4. Notes cannot be altered once saved (append-only). 6. Notes are visible to authorized users only.	Must Have
BRCFSFCM.005	5	BDO Contact Agent	Insure/ Attach supporting documents to a case Center	1. Agents can attach supporting documents to a case. 2. Documents are successfully uploaded and retrievable. 3. Attached documents are linked to the correct case and customer. 4. File type restrictions and size limits are enforced. 5. Document access follows role-based permissions. 5. All upload and access actions are logged.	Must Have
BRCFSFCM.006	6	System	Maintain a complete audit trail of case actions	1. All case-related actions are automatically logged, including: a. Case creation b. Updates c. Status changes d. Priority changes e. Escalations f. From value g. To value h. User ID i. Timestamp j. Attachments 2. Audit trail captures user ID, action performed, date, and time. 3. Audit records are read-only and cannot be modified. 6. Audit logs are retained based on defined retention policies.	Must Have

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCSFCM.007	7	Contact Center Supervisor	Reassign or escalate a case	- Supervisors can maintain resolution and close the case or reassign cases to another agent or team. - Escalation actions require selection of an escalation reason. (i.e. Past TAT, Due for Resolution) - Case ownership is updated immediately upon reassignment. - Escalation status is clearly reflected in the case lifecycle. - Reassignment and escalation actions are fully logged.	Must Have
BRCSFCM.008	8	System	Track case aging and SLA thresholds	- Case aging is calculated automatically from case creation time. - SLA timers start based on case type/category. - SLA breach indicators are clearly visible on both the case record and supervisory dashboard views. - Escalation rules can be triggered based on SLA thresholds. - The system shall automatically generate notifications when: - An SLA threshold is approaching breach - An SLA has been breached - Notifications shall be sent to appropriate recipients based on role (e.g., assigned agent, supervisor, fulfillment unit or designated escalation group). - Notifications shall be system generated and auditable, with the notification event logged - The system shall capture SLA and case aging data for monitoring and analysis. - SLA and case aging metrics (e.g., SLA compliance rate, average case aging, breached vs non-breached cases) shall be available through dashboard views to support real-time operational monitoring and supervisory oversight.	Must Have
BRCSFCM.010	9	System	The system shall support the closure, and return of an existing customer case when required information or action from the client is pending, and the creation of a	- The system allows an authorized user to close a case with a status (i.e. Closed by Fulfillment Unit, Closed by CSR) - Upon closure for pending client items, the system allows the user to create a new case that references the original case.	Must Have

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			new case that is explicitly linked to the original (closed) case.	3. The original case remains read-only after closure and cannot be modified. 4. The newly created case must be system linked to the original case via a unique reference. 5. Users can view the relationship between cases from both the original and new case records. 6. The linkage clearly identifies: - Original (closed) case - New (active) case - Reason for closure and re creation	
BRCFCM.011	10	Contact Center Management	Generate case management reports	1. Case management reports are generated accurately. 2. Reports include metrics such as: - Case volume - Aging - SLA compliance - Case status distribution 3. The same metrics shall be available via management dashboard views for real-time and summarized performance monitoring. 4. Reports and dashboards support filtering by date, category, priority, and status. 5. Reports are exportable as per agreed and defined formats (e.g., Excel, CSV, PDF). f. Only authorized users can access dashboards and generate or export reports.	Must Have
BRCFCM.012	11	Fulfillment Unit	Case Resolution and Closure	a. Receive the logged case will be able to maintain the resolution of the case then close it b. If case has an error or needs further handling, case can be returned to the contact center for correction or further handling	

Approval

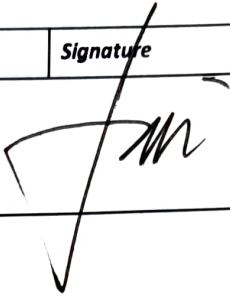

This document has been approved as the official Business Requirements Document for the **Customer Servicing Facility (CSF) – Case Management**.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
June 04, 2025	1.0	Initial Version	Zean C. Ibay
June 09, 2025	1.0	Business Key Capabilities Business Requirements Usage Requirements	Zean C. Ibay

Business Needs and Requirements

I. Executive Summary (What do you need?)

The business requires the development of a comprehensive Customer Service System to enhance interactions with Clients¹. This system aims to streamline the process of answering Client inquiries, resolving support issues, and maintaining updated client contact details. By integrating with existing data source systems², the new system will ensure that client contact details are consistently accurate and up-to-date. Additionally, the system will support updates to client contact details and synchronize these changes back to the original data sources³.

II. Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement (*attach the related law being addressed*)
- ☐ Customer Experience
- ☒ Others:

1. To improve customer experience by creating a system that allows users to view insurance accounts and contact details and update contact details from data source systems, ensuring data consistency and accuracy.
2. To provide a seamless and efficient platform for Client interactions that will enhance overall customer satisfaction and loyalty.
3. To enhance process efficiency, speed, and quality of data retrieval and updates.
4. To speed up response times to Client.

b. Benefits

1. Faster response times and consistent communication channels contribute to enhanced customer experience and satisfaction.
2. Higher efficiency via automating tasks to save time and reduce errors.
3. Streamlined support processes enable quicker and more effective resolution of customer issues.
4. Systematic tracking of modifications ensures transparency and accountability across operations.
5. Comprehensive data access to view the needed information.

¹ These are the BDOI Customers that BDOI serves.

² Current sources – QPS and EBIX

³ QPS and EBIX

6. Detailed reports support analysis and planning.
7. Simplified document handling processes support compliance and audit readiness.

III. What is the current process? (Before)

The current system, known as BDO-Insure Front-End System, is a web-based application developed by BDO IT for the BDO Insure Contact Center Agents. It is used by BDO Insure Contact Center Agents to view details of customers' insurance accounts, but it is limited to Consumer Banking Group (CBG) accounts. For non-CBG accounts, only contact details, account number, and expiry date can be viewed. In the current process, updating is limited to client contact details.

Identified Limitations and Challenges

- **Obsolete Infrastructure**

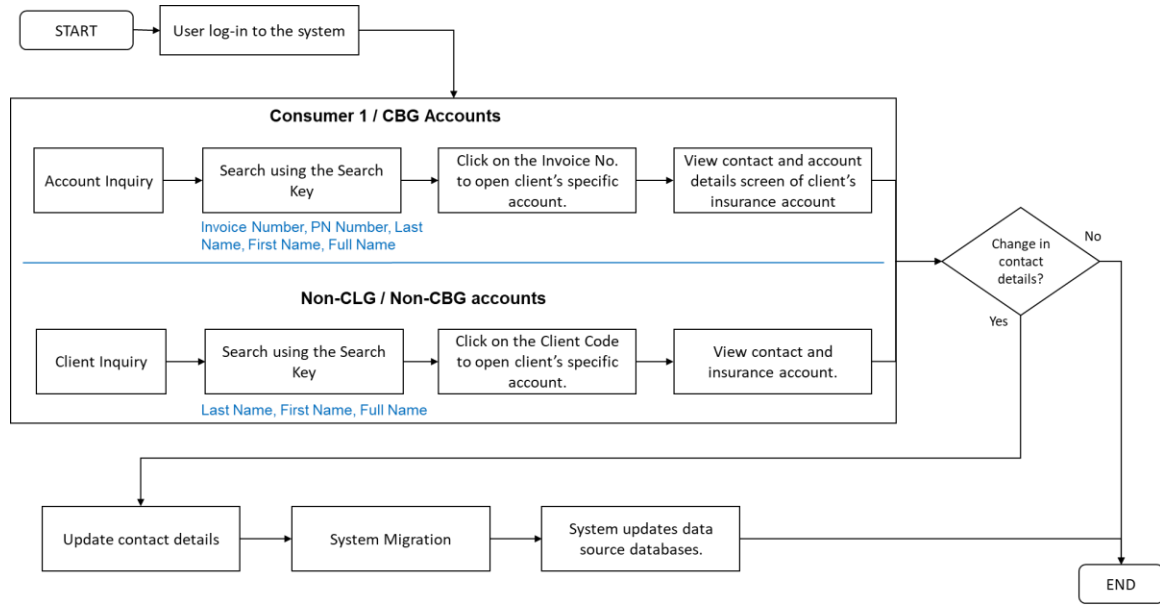

The system's underlying server, hardware, and associated components have reached end-of-life status and are due for replacement to ensure continued reliability and support.

- **Restricted Data Access**

The application provides limited visibility into non-CBG insurance accounts, which constrains agents' ability to deliver comprehensive support.

- **Lack of Role-Based Access Control**

There is a need to implement differentiated user roles to manage permissions for tasks such as updating records or uploading documents, ensuring secure and appropriate access.

IV. What is the envisioned process? (After)

The creation of a servicing facility will aid the BDO-Insure Contact Agent to efficiently interact with customers in order to answer questions, resolve support issues, improve credibility, and nurture relationships.

To create an application that will allow the users to view client contact details and account information from data sources.

The application should also support any update made to clients contact details and send the details back to data sources to update the core system.

V. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in

the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1. #)

Business Key Capabilities:

1. User Authentication
2. Access Client and Account Information
3. Search Facility
4. View, Add, or Update Client Contact Details
5. Show Payment History
6. View, and Download to Resend RA (Renewal Advise) to Clients
7. Attach or Upload Documents
8. View Current Client Information
9. View, and Download Policy to Clients
10. Record Changes to Client Information
11. Print or Save Audit Trail Report

Business Requirements

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As an Admin, I must be able to					
BRCsf-001	1	System Admin	Restrict access to authorized users so that only authorized personnel can access the Customer Service Facility	Result: - Secure access control. Acceptance Criteria: - Only authorized users can log in. - Users must enter a valid user ID and password to log in. - The system should deny access if the credentials are incorrect. Negative Scenario: - Cannot log in to the system. - Unauthorized users attempt to access the system.	Must have.
As a BDO Insure Contact Center Agents, I must be able to					
BRCsf-001	1.001	BDO Insure Contact	To log-in to the system via entering user ID and password	Result: Credentials entered correctly Acceptance Criteria:	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
		Center Agents		- User accesses system Negative Scenario: - Incorrect credentials entered - Access denied	
As a System, I must be able to					
BRCSF-001	1.002	System	Validates credentials and grant access if valid entry.	Result: - Credentials validated - Access granted Acceptance Criteria: - System accepts valid credentials - System grants access Negative Scenario: - System denies access	Must have.
As a BDO Insure Contact Center Agents, I must be able to					
BRCSF-002	2	BDO Insure Contact Center Agents	Access client and account information from data source systems so that I can view and update customer details.	Result: - Accurate and updated client information. Acceptance Criteria: - Client information is correctly retrieved and viewed. - Client information is correctly retrieved, updated and saved. - The system must retrieve client and account information from the data source systems. - Any updates to client contact information must reflect in the Client Database or Account Database automatically. Negative Scenario: - Failure to retrieve or update client information.	Must have.
BRCSF-003	3	BDO Insure Contact Center Agents	Search for client details using the following: - Name, - Client ID Number, - Account Number,	Result: - Efficient search functionality Acceptance Criteria: - Search results are accurate and relevant.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			<i>Promissory Number or Application Number</i> so that I can quickly find customers relevant information	- The system should return accurate results based on the search criteria. Negative Scenario: - Search returns incorrect or no results.	
BRCsf-003	3.001	BDO Insure Contact Center Agents	Search for client.	Result: - Client found. Acceptance Criteria: - Accurate display of client details. Negative Scenario: - Client not found - Inaccurate display	Must have.
BRCsf-004	4	BDO Insure Contact Center Agents	View, add, or update client contact details so that customer information is current and accurate.	Result: - Updated client contact information Acceptance Criteria: - Users must be able to view, add, or update client contact details. - Changes are correctly saved and reflected. Negative Scenario: - Failure to save or reflect changes.	Must have.
BRCsf-005	5	BDO Insure Contact Center Agents	View payment history so that I can provide accurate information to customers	Result: - Accurate payment history Acceptance Criteria: - Payment history is correctly displayed. Negative Scenario: - Payment history is incorrect or missing	Must have.
BRCsf-005	5.001	BDO Insure Contact Center Agents	View status so that I can provide accurate information to customers Status: - Pending - Awaiting	Result: - Latest status is shown Acceptance Criteria: - Status is correctly displayed. Negative Scenario: - Status is incorrect or missing	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCsf-006	6	BDO Insure Contact Center Agents	View and download to Resend RA (Renewal Advise) to Clients so that customers receive renewal information when requested / needed.	Result: - Faster turn-around-time on RA resend process. Acceptance Criteria: - RA is correctly viewed and resent. Negative Scenario: - Failure to view or resend RA.	Must have.
BRCsf-006	6.001	BDO Insure Contact Center Agents	- Access renewal advise - Select resend option - Confirm resend	Result: - Advise accessed - Option selected Acceptance Criteria: - RA sent successfully Negative Scenario: - Advise not accessed - Option not selected	Must have.

				- Documents are correctly stored and accessible. Negative Scenario: - Failure to attach/upload documents	
BRCSF-008	8	BDO Insure Contact Center Agents	View current client information so that I can provide accurate support	Result: - Accurate client information Acceptance Criteria: - Client information is correctly displayed Negative Scenario: - Client information is incorrect or missing	Must have.
BRCSF-009	9	BDO Insure Contact Center Agents	View, retrieve or download all uploaded policy-related documents so that I can access necessary information	Result: - Documents are correctly retrieved Acceptance Criteria: - Users must be able to retrieve all uploaded policy-related documents, including quotations, renewal advises, and claims reports. - Documents are correctly displayed and accessible. Negative Scenario: - Failure to retrieve documents.	Must have.
BRCSF-009	9.001	BDO Insure Contact Center Agents	- Search for client - Access uploaded documents - Retrieve document	Result: - Client found - Documents accessed - Document retrieved Acceptance Criteria: - System retrieves documents - System displays documents - Accurate document retrieval Negative Scenario: - Client not found - Documents not accessed - Document not retrieved	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a System, I must be able to					
BRCsf-010	10	System	Record changes to client information so that there is an audit trail	Result: - Accurate audit trail Acceptance Criteria: - Changes are correctly recorded. Negative Scenario: - Failure to record changes	Must have.
BRCsf-011	11	System	Print or save the audit trail report so that there is a record of changes	Result: - Accurate audit trail report Acceptance Criteria: - Users must be able to print or save an electronic copy of the Audit Trail Report. - Report is correctly printed/saved Negative Scenario: - Failure to print/save report	Must have.
BRCsf-011	11.001	System	Initiate a back-up every 15minutes and stored in a designated secure location. This is to minimize data loss.	Result: - Backups are successfully created every 15 minutes. - Each backup is timestamped and stored in a secure location. Acceptance Criteria: - Backups are created every 15 minutes without fail. - Each backup must be complete and restorable. - Backup process must not degrade system performance. Negative Scenario: - Backup Failure. - Corrupted Backup. - Performance Degradation	Must have.
As Contact Center Management Personnel, I must be able to					

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCsf-011	11.002	Contact Center Management Personnel	• Access audit trail • Select print/save option in excel / pdf format. • Confirm print/save in excel / pdf format.	Result: • Audit trail accessed • Option selected • Print/save confirmed Acceptance Criteria: • System retrieves audit trail • System prompts for print/save • Report printed/saved Negative Scenario: • Audit trail not accessed • Option not selected • Print/save failed	Must have.

Usage Requirements

The system should be user-friendly, secure, and efficient. It should support high availability, scalability, and performance to handle large volumes of data and transactions. Non-functional requirements include:

- Security - Ensure data protection and secure access.
- Performance - Fast response times and efficient processing.
- Reliability - High availability and minimal downtime.
- Usability - Intuitive user interface and easy navigation.

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent			
BDO-Insure Contact Center Agents and Supervisors and BDO Contact Center Personnel	Concurrent user access	24	24	144,400	01%	< 3 seconds
BDO Insure Contact Center Agents	Data retrieval and updates	24	24	144,400	01%	< 3 seconds
BDO Insure Contact Center Agents	Search functionality	24	24	144,400	01%	< 3 seconds
BDO Insure Contact Center Agents	Document management	16	16	113,800	01%	5 seconds
BDO Insure Leads / Heads	Report generation	8	8	As needed		5 seconds

Questions	Response
When is the highest system demand expected (e.g., year-end)?	Per historical data, BDO-Insure Contact Center's transaction is highest during the first quarter of the year.
When are peak times for usage (e.g., 12:00 - 14:00 daily)?	10am to 12pm; 2pm to 4pm
Do mobile and desktop end users expect different levels of speed and performance?	No

Availability	
<i>Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.</i>	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	99.9%
When do people use the system (e.g., 9am-6pm daily, 24/7)?	Between 6:00 AM – 10:00 PM
How long can the system be down each month or year without causing issues?	RTO (recovery time objective): 4 hours RPO (recovery point objective): 4 hours
What times are acceptable for system maintenance?	During weekdays and Saturdays, 9:00 PM to 5:00 AM.
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	RTO: 4hrs RPO: 4hrs

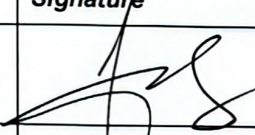

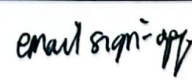

Data Retention & Archiving					
<i>Refer to how long data is stored, how it is managed overtime, and when it is moved to long-term storage or deleted, based on the business needs and legal/compliance requirements.</i>					
Data	Retention Period	Archival Period	Backup Frequency	Accessibility	Backup Retention Period
	(Data-In-Use / Online)	(Data-at-Rest / Offline)			
Client and Account Transactional Information	5 years	15 years	Every 4 hours		5 years
Contact Information Updates	5 years	15 years	Every 4 hours		5 years
Audit Trail	5 years	15 years	Every 4 hours		5 years
Document Attachments	5 years	15 years	Every 4 hours		5 years

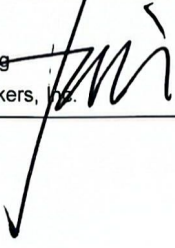

Questions	Response
Should certain data be anonymized over a particular period?	No.

Approval

This document has been approved as the official Business Requirements Document for the Customer Servicing Facility (CSF).

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Hi MS Myla,

Good day!

This email should be suffice to support inclusion of Items, #7 (two additional statuses) and #9 (E-policy sending).

For Items #10 and #11, both can be part of future enhancements. Creation of the requirement document shall undergo proper channel.

Thank you.

Project Team only...

Hi Ms Zai,

What is the next plan for CSF? Do we treat this email as the an attachment to the BRD, or do we still need another session (for those in red)?

Thank you.

Subject: Re: RE: Core Modernization: CSF

Hi Team,

The meeting focused on clarifying and validating the Customer Servicing Facility (CSF) requirements for the Core Modernization initiative, with emphasis on how BDO Insure contact center agents will access and manage client information. Key themes included client data retrieval, update processes, search functionality, account verification, payment history access, renewal advice resending, and integration with existing systems.

The CSF BRD aims to replace IBS. The BRD articulates the Business Unit's requirements by presenting the justification (why) and the defined business capabilities or expectations (what) that the initiative aims to address. The requirements in the BRD were discussed along with the Business Unit before the sign-off.

For the suggested requirements by the Solution Architects, we need to assess impact of those requirements (i.e. impact to scope, timeline, cost/resource).

Topics discussed:

- Customer Service Facility (CSF) Scope
 - CSF will log client inquiries, process requests, and provide agents visibility into updated client and account information.
 - Contact center agents must have access to accurate, real-time client data.
- Inquiry Channels
 - Clients can reach BDO Insure through the hotline, email, or website.
 - Dedicated hotline numbers and email teams exist for handling inquiries.
- Client Information Access & Update
 - Agents must retrieve and update client information from the source system.
 - Updates should automatically reflect in the core client and account databases.
 - Updates are limited to contact details only; changes like marital status require fulfillment unit handling.
- Search Functionality
 - Agents require a powerful search tool using:
 - Name
 - Client ID
 - Account number
 - PN (Promissory Note) number
 - Application number
 - Search results must be accurate; negative scenarios should be clearly indicated.
- Verification Requirements
 - Before modifying account information, agents must validate client identity using:
 - Address
 - Contact number
 - Email
 - Insured property details
- Payment History Viewing
 - Agents need access to recent payment history.
 - Systems typically show up to 11–12 months; older data may be archived.
 - Retention policies may vary based on performance and data volume.
- Policy Status Visibility
 - Agents must see status indicators such as:
 - Pending
 - Awaiting
 - Booked - Requested to be added
 - Open/Closed - Requested to be added
 - These statuses follow definitions set by Marketing, Processing, and Operations units.
- Renewal Advice (RA) Resending
 - Agents should be able to:
 - View RA
 - Download RA
 - Resend RA (usually via email)
 - RA files are often password-protected.
 - System must support viewing and resending with clear instructions.
- E-Policy Resending
- Case Management
 - Current case logging is being done via SharePoint. SharePoint is currently being used as an interim solution for the contact center.
 - Teams expressed need for enhanced case tracking and performance monitoring.
 - Future CSF solution might incorporate a more robust integrated case management feature.
- Open Items / Follow-ups
 - Need BU validation on:
 - Priority order for servicing (payments vs. claims)
 - Parameter alignment between Loan System and Insurance System
- Open Items / Follow-ups

Item	Description	Owner
1	Validate inclusion of new CSF capabilities into BRD revision	BU Heads
2	Review LOS integration needs	Systems Team
3	Align status definitions across departments	Marketing / Ops / Processing
4	Confirm implementation scope for case management	Project Team
5	Define verification and update restrictions	BU + Operations

Subject: Core Modernization: CSF

Hi Ms. @Zean C. Ibay,

May we request for a BU meeting to understand needed and required attachment to CSF.

Our initial question is:
1. What type of document is needed
2. Is it linked to a customer
3. Is it expected for retention for future use
4. What is the minimum requirement for the attachments
5. Can we download? Upload? After then upload?
6. Is there a matrix identified to keep it confidential?

Thank you.
