5/4/2026	1.0	Addendum to additional/updated requirements from the IT walkthrough last April 28-30, 2026	Roda Lyn Gallardo

Addendum¹: Business Requirements for New Business

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and clarify specific New Business BRD requirements identified during the IT walkthrough sessions conducted on April 28–30. This addendum serves as a supplemental reference to the approved BRDs to address items that require further elaboration, alignment, or technical clarification following detailed discussions with IT, Solution Architecture, and relevant stakeholders.

Specifically, this addendum aims to:

- Provide clear and unambiguous clarification of identified requirements to ensure consistent understanding across business and technical teams;
- Resolve gaps, assumptions, or ambiguities surfaced during the walkthrough sessions without altering the originally approved scope unless explicitly stated;
- Support requirement traceability by documenting clarifications and refinements in a controlled manner, in alignment with established BRD governance and documentation standards.

This addendum does not replace or supersede the original BRDs; rather, it complements them and shall be read in conjunction with the respective BRDs to guide solution design, development, testing, and implementation activities.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of Updated Business Requirements

Updated Requirement, Expected Result/Acceptance Criteria columns to add more details.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
BRNB.100	BRNB.100	Processing User	Include EOPT details in the placement details sent to the Insurer	Expected Result: Placement details generated and sent to the Insurer includes complete and accurate EOPT information (i.e. taxpayer name, TIN number, registered address, etc.). Acceptance Criteria: 1. Placement details sent to the insurer include EOPT details when EOPT information is available. 2. Any updates made to EOPT details prior to final placement submission are reflected in the placement details sent to the insurer.	Must have
BRNB.100.1	BRD NB Addendum (Workshop)	Processing Users	I want the generated service invoice to be sent to identified recipients	Expected Results: Service invoices are successfully sent to intended recipients. Acceptance Criteria: 1. User will get notification on the successfully and unsuccessfully sent service invoice 2. For unsuccessfully sent service invoice, user should be advised of the reason 3. Status, ownership, and time stamp are fully traceable for audit and reporting.	Must have
BRNB.107	BRNB.107	System	I must mark booked and fully paid transactions with an incentive eligibility indicator so incentive processing and reporting are accurate and auditable.	Expected Result: 1. Each booked and fully paid transaction clearly shows whether it qualifies for applicable incentives, considering any related endorsements. 2. Incentive eligibility is determined consistently based on	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				defined, rule-based criteria, including mother policy attributes and applicable endorsements. 3. Downstream incentive computation and reporting rely on this indicator. Acceptance Criteria: 1. The system evaluates booked and fully paid transactions against predefined incentive qualification rules including the presence of applicable endorsements. 2. An incentive qualification indicator is assigned and stored once the account is booked and fully paid, after applicable endorsement consideration is applied. 3. The incentive indicator is visible in transaction details, reports, and downstream processes. 4. The indicator is deterministic (rule-based) and not manually inferred or overridden unless authorized. 5. The qualification decision and applied rules are logged for audit and traceability. Negative Scenario: 1. Booked and fully paid transactions do not display incentive eligibility status due to missing or unprocessed endorsement information. 2. Incentives are computed without considering applicable endorsements, resulting in incorrect qualification tagging or payouts. 3. Endorsements that affect incentive eligibility are applied after booking but are not reflected in the incentive indicator. 4. Incentive qualification is manually assigned without system validation of endorsement impact, leading to inconsistency.	

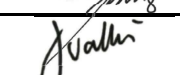

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.042	BRNB.042	Marketing	Create Quotation/Proposal for Bulk Processing - Create individual Quotation/proposal (i.e. IDF - Insurance declaration Form, FFYMI - Free first year motor Insurance, etc.) - Generate a Quotation/proposal reference number - Send single or multiple Quotation/proposal to the intended recipient/s - Send single or multiple supporting document to the intended recipient/s	Expected Result: The system allows users to create individual or bulk quotations/proposals, each with a unique reference number, and supports sending single or multiple quotations/proposals and their supporting documents to the intended recipients accurately and efficiently. Acceptance Criteria: - The system supports bulk creation of multiple or individual quick quotations/proposals (e.g. IDF, FFYMI, etc.), with each generated as a separate document. - Each quotation/proposal is automatically assigned a unique reference number. - Users can send a single or multiple quotation/proposal to one or more intended recipients in one action. - Users can attach and send single or multiple supporting documents together with, or independently from, the quotation/proposal. - Quotation/proposal distribution provides confirmation or status of successful delivery. - Bulk processing allows partial success, ensuring valid quotations/proposals are processed even if some records fail. - Submission is blocked and the user is notified if required information or mandatory supporting documents are missing or invalid.	Must have
BRNB.060	BRNB.060	Marketing /System	IV. Access generated Insurance Advice - Access the system generated Insurance Advice - Search Insurance advice - View list Insurance advice - View the details of the Insurance advice	Result: - User should be able to access system-generated insurance advice. - User should be able to search system-generated insurance advice. - User should be able to view the list of generated insurance advice.	Must have

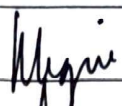

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
			b. Download the system generated Insurance Advice 1. Select single or multiple system generated Insurance Advice 2. Download single or multiple system generated Insurance Advice c. Save single or multiple system generated Insurance Advice to a designated location d. Send single or multiple system generated Insurance Advice to intended recipient/s 1. Encrypt and add password before sending Recipient for System-triggered sending of Insurance Advice (IA) should be available on the MIS level set up.	4. User should be able to view the details of generated insurance advice. 5. User should be able to download the generated insurance advice. 6. User should be able to select single or multiple insurance advice. 7. User should be able to download single or multiple insurance advice. 8. User should be able to save single or multiple system-generated insurance advice to a designated location. 9. User should be able to send single or multiple system-generated insurance advice to intended recipient/s. 10. User should be able to encrypt and add password before sending. 11. System to automatically send IA to the intended recipient if enrolled to a system-triggered set up. Negative Scenario: 1. User cannot access system-generated insurance advice. 2. User cannot search system-generated insurance advice. 3. User cannot view the list of generated insurance advice. 4. User cannot view the details of generated insurance advice. 5. User cannot download the generated insurance advice. 6. User cannot select single or multiple insurance advice. 7. User cannot download single or multiple insurance advice. 8. User cannot save single or multiple system-generated insurance advice to a designated location. 9. User cannot send single or multiple system-generated insurance advice to intended recipient/s. 10. User cannot encrypt and add password before sending. 11. System does not automatically send IA to the intended recipient even if enrolled to a system-triggered set up.	

Approval

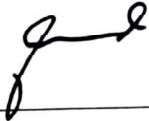

This document has been approved as the official Business Requirements Document for the New Business Fire and Motor.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

NEW BUSINESS – ADDENDUM (Workshop)
Business Requirements Document (BRD)
Prepared by: Business Project Services (BPS)

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/10/2026	1.0	Addendum to additional/updated requirements from the workshop last March 23-27, 2026	Roda Lyn Gallardo

Addendum¹: Business Requirements for New Business

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 23 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of New Business Requirements

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
BRNB.090		Marketing /Operations User	I want a clear and standard way to onboard new clients before we start any new business, so client details are set up correctly from the beginning, and we don't have to rely on manual or last-minute record creation later.	Expected Result: 1. Client onboarding is standardized and traceable as a prerequisite step. Acceptance Criteria: 1. System supports a defined onboarding step before NB quotation/booking begins. 2. Onboarding outcome is a created/verified client record. 3. Audit trail records onboard, when, and what key data was captured.	Must have
BRNB.091		All Users	I want client-level and account-level tags and special instructions to be captured and maintained at the client level, so that all business handling activities (servicing, collections, processing, etc.) consistently follow recorded client instructions.	Expected Result: The system allows controlled capture and maintenance of client-level and account-level tags and special instructions. Special instructions are available to authorized users and consistently applied across relevant business processes. Client and account handling follow recorded tags and instructions to ensure consistent treatment. Acceptance Criteria: 1. The system allows the tagging of clients and accounts using defined and controlled values. 2. Client-level and Account-level special instructions can be captured, updated, and viewed by authorized roles. 3. Tags and special instructions are enforced or referenced during relevant business processes. 4. Changes to tags and special instructions are logged, including who made the change, when, and from/to values. 5. Historical tags and instructions remain accessible for audit and compliance purposes.	Must have

² User could be but not limited to Marketing AO, TSU, Processing. User roles and authorization will be further defined in succeeding documentations.

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.092		Business Unit	I want each key data element (such as client, vehicle, property, address, policy, etc.) to have a clearly defined system that acts as the official source of truth, so that data conflicts across systems and teams are avoided, and data can be trusted, tracked, and audited.	Expected Result: 1. Defined a single authoritative source of truth for each key data element (i.e. client, vehicle, property, address, policy, etc.), including primary and fallback sources. Acceptance Criteria: 1. Complete lists of authoritative sources per key data element (client, policy, invoice, etc.). 2. System enforces/reflects those rules where applicable (e.g., read-only vs editable). 3. Exceptions/conflicts are logged or flagged for resolution.	Must have
BRNB.093		Marketing User	I want data standards for risk information (e.g., vehicle, property, address, etc.) so that quotations are complete, and downstream processing is consistent.	Expected Result: Quotation capture enforces minimum required detail. Acceptance Criteria: 1. Product Matrix defines required Minimum fields per line/type 2. System flags incomplete data as validation failure before submission. 3. Required fields are configurable by product/Line of Business if needed.	Must have
BRNB.094		System	I want explicit lifecycle distinguishing cancellation versus internal reversal so that so that the correct lifecycle status is applied, and audit trails remain accurate and compliant.	Expected Result: The system must distinguish between true policy cancellation (post issuance) and internal process reversal (pre-issuance or process correction), with standardized status values and reporting treatment. Acceptance Criteria: 1. Defined status for cancellation vs reversal and usage conditions.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. System enforces correct status transition rules. 3. Each transition logs reason and user/date/time.	
BRNB.095		System	I want explicit Insurance Advice (IA) automation trigger rules so that IA is generated consistently and aligned with lifecycle status.	Expected Result: IA generation is criteria-driven and traceable. Acceptance Criteria: 1. Trigger point(s) for IA generation are defined. 2. IA is generated only when criteria are satisfied. 3. IA generation events are logged.	Must have
BRNB.096		System	I want to recognize requests submitted by the Marketing team as the primary trigger for Processing activities, so that Processing workflows are initiated, routed, and tracked in the same standardized, controlled, and auditable manner as existing GRF and ARF requests.	Expected Results: Marketing submissions trigger Processing workflows. Processing users can clearly see, validate, and track all initiated requests. Acceptance Criteria: 1. Marketing-submitted requests are the required and official trigger for Processing activities. 2. Processing users can view all initiated requests in one place. 3. Each request displays its status, submission date, and originating unit. 4. Processing users can validate and track requests through their lifecycle. 5. All actions and status changes are logged for audit and traceability.	Must have
BRNB.097		System	I want to distinguish New Business transactions from Renewal transactions before Processing begins, so that each transaction is	Expected Results: New Business and Renewal transactions are clearly identified and handled through separate processing paths.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
			routed to the correct workflow, queue, and trigger, preventing incorrect handling, delays, or rework.	Transactions are processed correctly the first time, with no cross-routing or misclassification. Acceptance Criteria: 1. Each transaction is clearly classified as New Business or Renewal before Processing begins. 2. New Business and Renewal transactions are routed to separate workflows and queues. 3. The system prevents cross-routing between New Business and Renewal paths. 4. The transaction type and routing decision are visible, logged, and auditable.	
BRNB. 098		TSU	I want my involvement in decision-making to be determined by clear, rule-based criteria, so that my engagement is consistent, predictable, and not dependent on ad-hoc or manual routing.	Expected Result: TSU engagement rules are documented and enforceable. The system must define rule-based criteria for TSU involvement, including package products, fleet thresholds, and endorsement scenarios. Early Product Classification must be considered (i.e. fleet vs non-fleet, package vs non-package, single vs multiple locations, etc.) Acceptance Criteria: 1. Criteria for TSU involvement are defined (by product/risk/threshold etc.). 2. System routes/flags cases requiring TSU validation. 3. TSU actions and outcomes are logged.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB. 099		Processing User	I want visibility of CRM, policy, and account linkages so that updates and validation checks are performed consistently, and data inconsistency risk is reduced.	Expected Result: 1. The system must support CRM-like capabilities to manage leads, prospects, and client-level special instructions that are reusable across New Business and Renewal workflows. 2. Users can view linkage and changes as part of the processing context. Acceptance Criteria: 1. System shows linked identifiers across client/account/policy where applicable. 2. Changes to key identifiers are logged and viewable in history. 3. Missing linkage is flagged for follow-up	Must have
BRNB.100		Processing User	I want the service invoice to be generated based on the defined template. Triggers and ownership are also defined so that invoice handling is consistent and auditable.	Expected Result: Service invoices are generated based on clearly defined system triggers. The ownership of each service invoice is clearly assigned and visible. Invoice handling is consistent across all Processing scenarios. All the required details are captured based on the service invoice type (i.e. Insurer service invoice, internal service invoice, etc.) Acceptance Criteria: 1. Service invoices are generated only when approved system trigger rules are met. 2. Each invoice has a clearly assigned and visible owner within Processing. 3. Invoice handling follows a consistent, standard process across all scenarios.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. All required details are captured based on the service invoice type (e.g., insurer vs internal). 5. Invoice triggers, ownership, and updates are fully traceable for audit and reporting.	
		Processing Users	I want the generated service invoice to be sent to identified recipients	Expected Results: Service invoices are successfully sent to intended recipients. Acceptance Criteria: 1. User will get notification on the successfully and unsuccessfully sent service invoice 2. For unsuccessfully sent invoice, user should be advised of the reason 3. Status, ownership, and time stamp are fully traceable for audit and reporting.	
BRNB.101		Marketing User	I must have an identifier for Prospect clients and confirmed clients.	Expected Criteria: Each client record is clearly identified as either a Prospect Client or a Confirmed Client. Prospect and confirmed clients have distinct identifiers, allowing the system and users to differentiate them easily. Client status and identifiers are consistently recognized across all workflows, reporting, and downstream processes. Conversion from prospect to confirmed client is traceable without losing historical information. Acceptance Criteria: 1. Prospect clients and confirmed clients each have a clear, distinct identifier. 2. Client status (prospect vs confirmed) is explicitly set and visible	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. The system supports a controlled conversion from prospect to confirmed client without losing history. 4. All processes and reports consistently recognize the correct client identifier and status. 5. Client creation and conversion actions are logged for audit and traceability.	
BRNB.102		Marketing User/Operations User	The system must generate and maintain a single unique reference number for each account starting at Quotation and reuse it across all succeeding steps to support tracking and reconciliation.	Expected Result: 1. A single unique reference number is generated at the quotation stage for each account. 2. The same reference number is reused and retained across all succeeding steps (e.g., processing, booking, issuance, invoicing, etc.). 3. Users can track and reconcile each account end-to-end using one reference number. Acceptance Criteria: 1. The system automatically generates one unique reference number upon quotation creation. 2. The reference number persists unchanged throughout all downstream processes. 3. The reference number is visible to Marketing and Operations users across screens and reports. 4. Reports and downstream systems reference the same identifier consistently.	Must have
BRNB.103		Marketing	I want to receive hold cover confirmation from Insurers	Expected Result: Hold cover confirmation from the Insurer is captured and stored in the system. Hold cover status is clearly visible to Marketing and relevant downstream users. Acceptance Criteria:	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. The system allows entry or recording of insurer hold cover confirmation details (i.e. Insurer name, confirmation reference, and confirmation date) 2. Hold cover confirmation status is explicitly set. 3. Confirmation details, including user and timestamp, are logged for audit purposes.	
BRNB.104		System	I must automatically extract relevant details from uploaded documents and update the corresponding account to reduce manual data entry and ensure data accuracy.	Expected Result: 1. Relevant data is automatically captured from uploaded documents. 2. Extracted details are applied to the correct account records. 3. Manual re-keying is minimized, improving accuracy and efficiency. 4. User confirmation of the captured details is required prior to saving. Acceptance Criteria: 1. The system supports automatic extraction of key data fields from the document. 2. Extracted data is mapped correctly to the corresponding account fields. 3. Users can review and confirm extracted data before final update, where applicable. 4. Updates to account records are logged with source document reference, user (if applicable), and timestamp.	Must have
BRNB.105		System	I must have the functionality to trigger the defined business process based on uploaded documents	Expected Result: Uploaded documents automatically initiate the correct downstream process. Document-driven processing follows defined rules and is applied consistently. Acceptance Criteria: 1. The system evaluates uploaded documents using predefined trigger rules. 2. The correct workflow or process is automatically initiated based on the evaluation results.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Each triggered process is linked to the originating document and associated account. 4. Trigger events, including document reference, process initiated, and date/time, are logged for audit purposes.	
BRNB.106		System	I must have the capability to apply a retention policy to quotations, accounts, or client records even to those that did not proceed or were voided.	Expected Results: Quotations, accounts, and client records are eligible for retention policy application regardless of whether they proceeded or were voided. Retention handling (i.e. retain, archive, purge, etc.) is consistent and compliant with defined rules. Records remain available for reference or audit during the retention period. Acceptance Criteria: 1. The system identifies records with statuses (i.e. Not Proceeded, Abandoned, Voided, etc.) 2. Retention rules are automatically applied based on record type and status. 3. Retained or archived records remain accessible until the retention period expires. 4. Retention actions are logged with date/time and system action for audit purposes.	Must have
BRNB.107		System	I must mark booked transactions with an incentive eligibility indicator so incentive processing and reporting are accurate and auditable.	Expected Result: 1. Each booked transaction clearly shows whether it qualifies with applicable incentives. 2. Incentive eligibility is determined consistently based on defined criteria. 3. Downstream incentive computation and reporting rely on this indicator. Acceptance Criteria: 1. The system evaluates booked transactions against predefined incentive qualification rules. 2. An incentive qualification indicator is assigned and stored at	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				booking. 3. The incentive indicator is visible in transaction details, reports, and downstream processes. 4. The indicator is deterministic (rule-based) and not manually inferred or overridden unless authorized. 5. The qualification decision and applied rules are logged for audit and traceability. Negative Scenario: 1. Booked transactions do not display incentive eligibility status. 2. Incentives are computed without a clear qualification indicator, resulting to incorrect payouts.	
BRNB.108		System	I must ensure cost center details are captured as part of MIS information for every booked transaction, so downstream processing and reporting remain accurate and consistent.	Expected Result: 1. Cost center is captured and stored for every booked transaction as part of MIS data. 2. Downstream processes (e.g. accounting, disbursement, incentives, etc.) can reliably use cost center information. 3. MIS and management reports include cost centers as a standard reporting dimension. Acceptance Criteria: 1. The system requires cost center capture at booking for all applicable transactions. 2. Cost center values follow standardized and predefined master data. 3. Booked transactions cannot proceed if mandatory cost center information is missing. 4. Cost center details are visible in transaction views, MIS outputs, and reports. 5. Cost center data is consistently passed to downstream systems and processes. 6. Capture and updates of cost center information are logged for audit purposes.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. Booked transactions are completed without cost center information. 2. Inconsistent or free-text cost center values result in reporting and reconciliation issues.	
BRNB.109		Marketing User	I want to be able to use the account level contact details (i.e. mailing address, email address, mobile, contact person name, and contact person's mobile number) in communicating with the client. If there are no account level contact details. The system should automatically capture the client-level account details.	Expected Result: User can view and use the account level contact details in communicating with the client. Client level contact details are automatically captured when there are no defined account level contact details. Acceptance Criteria: 1. Account level contact details are used in communication with the client (emails, letters, etc.) 2. User can view/update the account level contact details as needed 3. Actions are logged with name/date/time and system of action for audit purposes.	Must have
BRNB.110		Marketing User	I want to view the list and details of Non-Bank Client is due for KYC review	Expected Result: User can view whether the client is due to KYC review. System to send a list of clients due for KYC review monthly. Acceptance Criteria: 1. User received a notification once the list is available 2. User can view the list in a shared path 3. User can download and print the list as needed 4. User can filter the list based on criteria	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.111		Marketing User/Processing User	I want to bypass the placement step and book the account directly so that I can efficiently complete bookings for accounts where policies have already been issued directly to client by the Insurer.	Expected Result: 1. Users can successfully bypass the placement process for accounts with policies issued prior to booking. 2. The system enforces the upload of issued policy documentation (i.e. policy copy, Official Receipt, etc.) before allowing booking completion. 3. The account is booked accurately without placement data while maintaining compliance and audit requirements. 4. Uploaded policy documents are securely stored, retrievable, and clearly associated with the booked account. Acceptance Criteria: 1. Users can bypass the placement step for accounts where a policy has already been issued prior to booking. 2. The system allows direct booking without completing placement-related fields. 3. Uploading at least one issued policy document is mandatory before booking can be completed. 4. The system prevents booking and shows an error if no policy is uploaded. 5. Uploaded policy documents are validated, stored, and linked to the booked account for audit and traceability.	Must have
BRNB.112		Marketing User/Processing User	I must be able to book a multi-year insurance policy so that policy coverage, billing, and financial processing are correctly established over the policy term.	Expected Result: Multi-year insurance policies are booked accurately and consistently. Acceptance Criteria: 1. The system supports policy booking of multi-year accounts. 2. The policy is identified and stored as a multi-year policy.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. All policy numbers are linked to the booking reference number (Example. 5-year term equals 5 policy numbers) 4. Booking details are traceable with audit history.	
BRNB.113		Marketing User	I must be able upload, maintain (add, edit, cancel), and view a list of Free First-Year (FFY) accounts in the system by tagging eligible accounts as "Free First Year," so that these accounts can be clearly identified for tracking, reporting, and downstream renewal processing.	Expected Result: A single, accurate, and auditable list of Free First-Year accounts is maintained in the system, with all eligible accounts consistently tagged and available for operational, reporting, and renewal processes. Acceptance Criteria: 1. The system allows users to upload a list of accounts to be designated as Free First-Year (FFY) using a supported file format. 2. Uploaded accounts are validated against existing account records using an identified unique reference number (i.e. serial number, motor number, etc.) to prevent duplicates and ensure data accuracy. 3. Users can add FFY tagging to eligible accounts manually or via bulk upload. 4. Users can edit FFY account attributes, including free-period start date and end date, subject to role-based access controls. 5. Users can cancel or deactivate FFY status for an account without deleting the account record, and the system clearly reflects the cancelled FFY status. 6. All FFY accounts are clearly tagged with a standardized "Free First Year" indicator at the account level. 7. The system automatically calculates and maintains the FFY end date based on the start date. 8. Users can view a consolidated FFY account list that is searchable, filterable, and sortable by key attributes such as account status, FFY start date, and FFY end date, etc. 9. All FFY status changes (add, edit, cancel) are audit-logged, capturing the user, date, and type of change. 10. Only active and eligible accounts can be tagged as FFY; ineligible or cancelled accounts are restricted from FFY tagging.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				11. The FFY tag and list are available for downstream processes, including renewal identification, reporting, and revenue forecasting. 12. FFY tagging persists across account updates unless explicitly removed.	
BRNB.114		Marketing User	I must be able to identify and tag accounts that are directly paid with Insurers in the system based on defined criteria so that these accounts can be clearly recognized for billing operations, reporting, and downstream financial processes.	Expected Result: Direct Payment accounts are accurately identified and consistently tagged at the account level, enabling reliable billing execution, reporting, and operational handling. Acceptance Criteria: 1. The system supports configurable criteria to identify Direct Payment accounts 2. Accounts meeting the Direct Payment criteria are automatically or manually tagged with a standardized indicator at the account level. 3. Users can add, update, or remove the Direct Payment tag when account payment arrangements change, subject to role-based access controls. 4. Tagging logic prevents Direct Payment tagging for ineligible or incompatible account types. 5. Users can view a consolidated list of Direct Payment accounts that is searchable, filterable, and sortable by key attributes (e.g., account status, payment method). 6. All changes to Direct Payment tagging are audit-logged, capturing the user, date, and nature of the change. 7. The Direct Payment tag is visible across relevant billing, accounting, and reporting views. 8. Tagged Direct Payment accounts are available for downstream processes, including billing, reconciliation, and financial reporting.	Must have

Table of Updated Business Requirements

Updated Requirement, Expected Result/Acceptance Criteria columns to add more details.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
BRNB.004	BRNB.004	Marketing User	As a user, I want a standard intake or data capture template for quotation/Proposal so that data quality is consistent across channels and rework is reduced.	Expected Result: Intake data is standardized considering all package and non-packaged products with flexibility for Marketing to input or adjust terms. Quotations are created from a consistent minimum dataset. Acceptance Criteria: 1. System supports a standardized capture template for intake. 2. Validation checks confirm completeness prior to quotation creation/submission. 3. Template versioning is maintained.	Must have
BRNB.022	BRNB.022	System	I want workflow stage definitions and allow transitions (i.e. placement, booking, issuance) so that workflow routing, ownership, and reporting are consistent.	Expected Result: Each workflow stage (e.g., placement, booking, issuance, etc.) has a clearly defined meaning and purpose. Only approved and valid transitions between stages are allowed. Workflows are automatically routed to the correct team or owner based on the current stage. Workflow routing, ownership responsibilities, and reporting accuracy are clear and consistent across stages without ambiguity or misinterpretation. Acceptance Criteria: 1. Stage list is defined (i.e. placement, booking, issuance, endorsement, etc.). 2. Allowed transitions are defined and enforced. 3. Current stage is visible and reportable. 4. Each stage/status change is automatically timestamped. 5. Each stage/status change records the responsible user or system action that triggered the change.	Must have
BRNB.115	BRNB.022	All users	I want to be able to see and track the status of each account so that I have clear visibility of progress, know where each account currently stands, and can act promptly when needed.	Expected Results: Each account has a clear, up-to-date status at every stage from quotation to booking. Users can easily see the status and progression history of an account. Status information is consistent across screens, reports, and downstream processes. Delays or stalled accounts are easily	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				identified. Status reports should be available for download and audit, showing all status changes per quotation/proposal and activities. Acceptance Criteria: 1. Account status is visible at all stages 2. Status updates automatically as the account progresses through the lifecycle. 3. Users can view both current and previous statuses for an account. 4. Status definitions are consistent and clearly understood across the system. 5. Each status change is timestamped and records the responsible user or system action. 6. Status tracking is included in system-generated reports (e.g., report showing current status of each account, placement summary report, matched/unmatched payments report). 7. Users can download status reports. 8. Only authorized users can view or modify status information.	
BRNB.069	BRNB.069	Processing User	I want to be able to generate placement files/slips. I want explicit rules on when placement may be generated so that premature placement and insurer rejection leading to rework are avoided.	Expected Result: System should be able to automatically generate placement file. Placement is generated only when prerequisites are satisfied. System must allow users to re-generate placement slip as needed (i.e., for returned account/s, etc.). System must allow batch or individual placement file/Slip generation. Acceptance Criteria: 1. Workflow defines prerequisites for placement generation. 2. System prevents placement generation when conditions are unmet. 3. Placement creation is auditable.	Must have

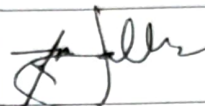

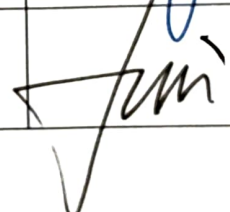

Approval

This document has been approved as the official Business Requirements Document for the New Business

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

NEW BUSINESS – ADDENDUM (Workshop)

Business Requirements Document (BRD)

Prepared by: Business Project Services (BPS)

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/10/2026	1.0	Addendum to additional/updated requirements from the workshop last March 23-27, 2026	Roda Lyn Gallardo

Addendum¹: Business Requirements for New Business

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 23 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of New Business Requirements

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
BRNB.090		Marketing /Operations User	I want a clear and standard way to onboard new clients before we start any new business, so client details are set up correctly from the beginning, and we don't have to rely on manual or last-minute record creation later.	Expected Result: 1. Client onboarding is standardized and traceable as a prerequisite step. Acceptance Criteria: 1. System supports a defined onboarding step before NB quotation/booking begins. 2. Onboarding outcome is a created/verified client record. 3. Audit trail records onboard, when, and what key data was captured.	Must have
BRNB.091		All Users	I want client-level and account-level tags and special instructions to be captured and maintained at the client level, so that all business handling activities (servicing, collections, processing, etc.) consistently follow recorded client instructions.	Expected Result: The system allows controlled capture and maintenance of client-level and account-level tags and special instructions. Special instructions are available to authorized users and consistently applied across relevant business processes. Client and account handling follow recorded tags and instructions to ensure consistent treatment. Acceptance Criteria: 1. The system allows the tagging of clients and accounts using defined and controlled values. 2. Client-level and Account-level special instructions can be captured, updated, and viewed by authorized roles. 3. Tags and special instructions are enforced or referenced during relevant business processes. 4. Changes to tags and special instructions are logged, including who made the change, when, and from/to values. 5. Historical tags and instructions remain accessible for audit and compliance purposes.	Must have

² User could be but not limited to Marketing AO, TSU, Processing. User roles and authorization will be further defined in succeeding documentations.

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.092		Business Unit	I want each key data element (such as client, vehicle, property, address, policy, etc.) to have a clearly defined system that acts as the official source of truth, so that data conflicts across systems and teams are avoided, and data can be trusted, tracked, and audited.	Expected Result: 1. Defined a single authoritative source of truth for each key data element (i.e. client, vehicle, property, address, policy, etc.), including primary and fallback sources. Acceptance Criteria: 1. Complete lists of authoritative sources per key data element (client, policy, invoice, etc.). 2. System enforces/reflects those rules where applicable (e.g., read-only vs editable). 3. Exceptions/conflicts are logged or flagged for resolution.	Must have
BRNB.093		Marketing User	I want data standards for risk information (e.g., vehicle, property, address, etc.) so that quotations are complete, and downstream processing is consistent.	Expected Result: Quotation capture enforces minimum required detail. Acceptance Criteria: 1. Product Matrix defines required Minimum fields per line/type 2. System flags incomplete data as validation failure before submission. 3. Required fields are configurable by product/Line of Business if needed.	Must have
BRNB.094		System	I want explicit lifecycle distinguishing cancellation versus internal reversal so that so that the correct lifecycle status is applied, and audit trails remain accurate and compliant.	Expected Result: The system must distinguish between true policy cancellation (post issuance) and internal process reversal (pre-issuance or process correction), with standardized status values and reporting treatment. Acceptance Criteria: 1. Defined status for cancellation vs reversal and usage conditions.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. System enforces correct status transition rules. 3. Each transition logs reason and user/date/time.	
BRNB.095		System	I want explicit Insurance Advice (IA) automation trigger rules so that IA is generated consistently and aligned with lifecycle status.	Expected Result: IA generation is criteria-driven and traceable. Acceptance Criteria: 1. Trigger point(s) for IA generation are defined. 2. IA is generated only when criteria are satisfied. 3. IA generation events are logged.	Must have
BRNB.096		System	I want to recognize requests submitted by the Marketing team as the primary trigger for Processing activities, so that Processing workflows are initiated, routed, and tracked in the same standardized, controlled, and auditable manner as existing GRF and ARF requests.	Expected Results: Marketing submissions trigger Processing workflows. Processing users can clearly see, validate, and track all initiated requests. Acceptance Criteria: 1. Marketing-submitted requests are the required and official trigger for Processing activities. 2. Processing users can view all initiated requests in one place. 3. Each request displays its status, submission date, and originating unit. 4. Processing users can validate and track requests through their lifecycle. 5. All actions and status changes are logged for audit and traceability.	Must have
BRNB.097		System	I want to distinguish New Business transactions from Renewal transactions before Processing begins, so that each transaction is	Expected Results: New Business and Renewal transactions are clearly identified and handled through separate processing paths.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
			routed to the correct workflow, queue, and trigger, preventing incorrect handling, delays, or rework.	Transactions are processed correctly the first time, with no cross-routing or misclassification. Acceptance Criteria: 1. Each transaction is clearly classified as New Business or Renewal before Processing begins. 2. New Business and Renewal transactions are routed to separate workflows and queues. 3. The system prevents cross-routing between New Business and Renewal paths. 4. The transaction type and routing decision are visible, logged, and auditable.	
BRNB. 098		TSU	I want my involvement in decision-making to be determined by clear, rule-based criteria, so that my engagement is consistent, predictable, and not dependent on ad-hoc or manual routing.	Expected Result: TSU engagement rules are documented and enforceable. The system must define rule-based criteria for TSU involvement, including package products, fleet thresholds, and endorsement scenarios. Early Product Classification must be considered (i.e. fleet vs non-fleet, package vs non-package, single vs multiple locations, etc.) Acceptance Criteria: 1. Criteria for TSU involvement are defined (by product/risk/threshold etc.). 2. System routes/flags cases requiring TSU validation. 3. TSU actions and outcomes are logged.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB. 099		Processing User	I want visibility of CRM, policy, and account linkages so that updates and validation checks are performed consistently, and data inconsistency risk is reduced.	Expected Result: 1. The system must support CRM-like capabilities to manage leads, prospects, and client-level special instructions that are reusable across New Business and Renewal workflows. 2. Users can view linkage and changes as part of the processing context. Acceptance Criteria: 1. System shows linked identifiers across client/account/policy where applicable. 2. Changes to key identifiers are logged and viewable in history. 3. Missing linkage is flagged for follow-up	Must have
BRNB.100		Processing User	I want the service invoice to be generated based on the defined template. Triggers and ownership are also defined so that invoice handling is consistent and auditable.	Expected Result: Service invoices are generated based on clearly defined system triggers. The ownership of each service invoice is clearly assigned and visible. Invoice handling is consistent across all Processing scenarios. All the required details are captured based on the service invoice type (i.e. Insurer service invoice, internal service invoice, etc.) Acceptance Criteria: 1. Service invoices are generated only when approved system trigger rules are met. 2. Each invoice has a clearly assigned and visible owner within Processing. 3. Invoice handling follows a consistent, standard process across all scenarios.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. All required details are captured based on the service invoice type (e.g., insurer vs internal). 5. Invoice triggers, ownership, and updates are fully traceable for audit and reporting.	
		Processing Users	I want the generated service invoice to be sent to identified recipients	Expected Results: Service invoices are successfully sent to intended recipients. Acceptance Criteria: 1. User will get notification on the successfully and unsuccessfully sent service invoice 2. For unsuccessfully sent invoice, user should be advised of the reason 3. Status, ownership, and time stamp are fully traceable for audit and reporting.	
BRNB.101		Marketing User	I must have an identifier for Prospect clients and confirmed clients.	Expected Criteria: Each client record is clearly identified as either a Prospect Client or a Confirmed Client. Prospect and confirmed clients have distinct identifiers, allowing the system and users to differentiate them easily. Client status and identifiers are consistently recognized across all workflows, reporting, and downstream processes. Conversion from prospect to confirmed client is traceable without losing historical information. Acceptance Criteria: 1. Prospect clients and confirmed clients each have a clear, distinct identifier. 2. Client status (prospect vs confirmed) is explicitly set and visible	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. The system supports a controlled conversion from prospect to confirmed client without losing history. 4. All processes and reports consistently recognize the correct client identifier and status. 5. Client creation and conversion actions are logged for audit and traceability.	
BRNB.102		Marketing User/Operations User	The system must generate and maintain a single unique reference number for each account starting at Quotation and reuse it across all succeeding steps to support tracking and reconciliation.	Expected Result: 1. A single unique reference number is generated at the quotation stage for each account. 2. The same reference number is reused and retained across all succeeding steps (e.g., processing, booking, issuance, invoicing, etc.). 3. Users can track and reconcile each account end-to-end using one reference number. Acceptance Criteria: 1. The system automatically generates one unique reference number upon quotation creation. 2. The reference number persists unchanged throughout all downstream processes. 3. The reference number is visible to Marketing and Operations users across screens and reports. 4. Reports and downstream systems reference the same identifier consistently.	Must have
BRNB.103		Marketing	I want to receive hold cover confirmation from Insurers	Expected Result: Hold cover confirmation from the Insurer is captured and stored in the system. Hold cover status is clearly visible to Marketing and relevant downstream users. Acceptance Criteria:	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. The system allows entry or recording of insurer hold cover confirmation details (i.e. Insurer name, confirmation reference, and confirmation date) 2. Hold cover confirmation status is explicitly set. 3. Confirmation details, including user and timestamp, are logged for audit purposes.	
BRNB.104		System	I must automatically extract relevant details from uploaded documents and update the corresponding account to reduce manual data entry and ensure data accuracy.	Expected Result: 1. Relevant data is automatically captured from uploaded documents. 2. Extracted details are applied to the correct account records. 3. Manual re-keying is minimized, improving accuracy and efficiency. 4. User confirmation of the captured details is required prior to saving. Acceptance Criteria: 1. The system supports automatic extraction of key data fields from the document. 2. Extracted data is mapped correctly to the corresponding account fields. 3. Users can review and confirm extracted data before final update, where applicable. 4. Updates to account records are logged with source document reference, user (if applicable), and timestamp.	Must have
BRNB.105		System	I must have the functionality to trigger the defined business process based on uploaded documents	Expected Result: Uploaded documents automatically initiate the correct downstream process. Document-driven processing follows defined rules and is applied consistently. Acceptance Criteria: 1. The system evaluates uploaded documents using predefined trigger rules. 2. The correct workflow or process is automatically initiated based on the evaluation results.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Each triggered process is linked to the originating document and associated account. 4. Trigger events, including document reference, process initiated, and date/time, are logged for audit purposes.	
BRNB.106		System	I must have the capability to apply a retention policy to quotations, accounts, or client records even to those that did not proceed or were voided.	Expected Results: Quotations, accounts, and client records are eligible for retention policy application regardless of whether they proceeded or were voided. Retention handling (i.e. retain, archive, purge, etc.) is consistent and compliant with defined rules. Records remain available for reference or audit during the retention period. Acceptance Criteria: 1. The system identifies records with statuses (i.e. Not Proceeded, Abandoned, Voided, etc.) 2. Retention rules are automatically applied based on record type and status. 3. Retained or archived records remain accessible until the retention period expires. 4. Retention actions are logged with date/time and system action for audit purposes.	Must have
BRNB.107		System	I must mark booked transactions with an incentive eligibility indicator so incentive processing and reporting are accurate and auditable.	Expected Result: 1. Each booked transaction clearly shows whether it qualifies with applicable incentives. 2. Incentive eligibility is determined consistently based on defined criteria. 3. Downstream incentive computation and reporting rely on this indicator. Acceptance Criteria: 1. The system evaluates booked transactions against predefined incentive qualification rules. 2. An incentive qualification indicator is assigned and stored at	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				booking. 3. The incentive indicator is visible in transaction details, reports, and downstream processes. 4. The indicator is deterministic (rule-based) and not manually inferred or overridden unless authorized. 5. The qualification decision and applied rules are logged for audit and traceability. Negative Scenario: 1. Booked transactions do not display incentive eligibility status. 2. Incentives are computed without a clear qualification indicator, resulting to incorrect payouts.	
BRNB.108		System	I must ensure cost center details are captured as part of MIS information for every booked transaction, so downstream processing and reporting remain accurate and consistent.	Expected Result: 1. Cost center is captured and stored for every booked transaction as part of MIS data. 2. Downstream processes (e.g. accounting, disbursement, incentives, etc.) can reliably use cost center information. 3. MIS and management reports include cost centers as a standard reporting dimension. Acceptance Criteria: 1. The system requires cost center capture at booking for all applicable transactions. 2. Cost center values follow standardized and predefined master data. 3. Booked transactions cannot proceed if mandatory cost center information is missing. 4. Cost center details are visible in transaction views, MIS outputs, and reports. 5. Cost center data is consistently passed to downstream systems and processes. 6. Capture and updates of cost center information are logged for audit purposes.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. Booked transactions are completed without cost center information. 2. Inconsistent or free-text cost center values result in reporting and reconciliation issues.	
BRNB.109		Marketing User	I want to be able to use the account level contact details (i.e. mailing address, email address, mobile, contact person name, and contact person's mobile number) in communicating with the client. If there are no account level contact details. The system should automatically capture the client-level account details.	Expected Result: User can view and use the account level contact details in communicating with the client. Client level contact details are automatically captured when there are no defined account level contact details. Acceptance Criteria: 1. Account level contact details are used in communication with the client (emails, letters, etc.) 2. User can view/update the account level contact details as needed 3. Actions are logged with name/date/time and system of action for audit purposes.	Must have
BRNB.110		Marketing User	I want to view the list and details of Non-Bank Client is due for KYC review	Expected Result: User can view whether the client is due to KYC review. System to send a list of clients due for KYC review monthly. Acceptance Criteria: 1. User received a notification once the list is available 2. User can view the list in a shared path 3. User can download and print the list as needed 4. User can filter the list based on criteria	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.111		Marketing User/Processing User	I want to bypass the placement step and book the account directly so that I can efficiently complete bookings for accounts where policies have already been issued directly to client by the Insurer.	Expected Result: 1. Users can successfully bypass the placement process for accounts with policies issued prior to booking. 2. The system enforces the upload of issued policy documentation (i.e. policy copy, Official Receipt, etc.) before allowing booking completion. 3. The account is booked accurately without placement data while maintaining compliance and audit requirements. 4. Uploaded policy documents are securely stored, retrievable, and clearly associated with the booked account. Acceptance Criteria: 1. Users can bypass the placement step for accounts where a policy has already been issued prior to booking. 2. The system allows direct booking without completing placement-related fields. 3. Uploading at least one issued policy document is mandatory before booking can be completed. 4. The system prevents booking and shows an error if no policy is uploaded. 5. Uploaded policy documents are validated, stored, and linked to the booked account for audit and traceability.	Must have
BRNB.112		Marketing User/Processing User	I must be able to book a multi-year insurance policy so that policy coverage, billing, and financial processing are correctly established over the policy term.	Expected Result: Multi-year insurance policies are booked accurately and consistently. Acceptance Criteria: 1. The system supports policy booking of multi-year accounts. 2. The policy is identified and stored as a multi-year policy.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. All policy numbers are linked to the booking reference number (Example. 5-year term equals 5 policy numbers) 4. Booking details are traceable with audit history.	
BRNB.113		Marketing User	I must be able upload, maintain (add, edit, cancel), and view a list of Free First-Year (FFY) accounts in the system by tagging eligible accounts as "Free First Year," so that these accounts can be clearly identified for tracking, reporting, and downstream renewal processing.	Expected Result: A single, accurate, and auditable list of Free First-Year accounts is maintained in the system, with all eligible accounts consistently tagged and available for operational, reporting, and renewal processes. Acceptance Criteria: 1. The system allows users to upload a list of accounts to be designated as Free First-Year (FFY) using a supported file format. 2. Uploaded accounts are validated against existing account records using an identified unique reference number (i.e. serial number, motor number, etc.) to prevent duplicates and ensure data accuracy. 3. Users can add FFY tagging to eligible accounts manually or via bulk upload. 4. Users can edit FFY account attributes, including free-period start date and end date, subject to role-based access controls. 5. Users can cancel or deactivate FFY status for an account without deleting the account record, and the system clearly reflects the cancelled FFY status. 6. All FFY accounts are clearly tagged with a standardized "Free First Year" indicator at the account level. 7. The system automatically calculates and maintains the FFY end date based on the start date. 8. Users can view a consolidated FFY account list that is searchable, filterable, and sortable by key attributes such as account status, FFY start date, and FFY end date, etc. 9. All FFY status changes (add, edit, cancel) are audit-logged, capturing the user, date, and type of change. 10. Only active and eligible accounts can be tagged as FFY; ineligible or cancelled accounts are restricted from FFY tagging.	Must have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				11. The FFY tag and list are available for downstream processes, including renewal identification, reporting, and revenue forecasting. 12. FFY tagging persists across account updates unless explicitly removed.	
BRNB.114		Marketing User	I must be able to identify and tag accounts that are directly paid with Insurers in the system based on defined criteria so that these accounts can be clearly recognized for billing operations, reporting, and downstream financial processes.	Expected Result: Direct Payment accounts are accurately identified and consistently tagged at the account level, enabling reliable billing execution, reporting, and operational handling. Acceptance Criteria: 1. The system supports configurable criteria to identify Direct Payment accounts 2. Accounts meeting the Direct Payment criteria are automatically or manually tagged with a standardized indicator at the account level. 3. Users can add, update, or remove the Direct Payment tag when account payment arrangements change, subject to role-based access controls. 4. Tagging logic prevents Direct Payment tagging for ineligible or incompatible account types. 5. Users can view a consolidated list of Direct Payment accounts that is searchable, filterable, and sortable by key attributes (e.g., account status, payment method). 6. All changes to Direct Payment tagging are audit-logged, capturing the user, date, and nature of the change. 7. The Direct Payment tag is visible across relevant billing, accounting, and reporting views. 8. Tagged Direct Payment accounts are available for downstream processes, including billing, reconciliation, and financial reporting.	Must have

Table of Updated Business Requirements

Updated Requirement, Expected Result/Acceptance Criteria columns to add more details.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
BRNB.004	BRNB.004	Marketing User	As a user, I want a standard intake or data capture template for quotation/Proposal so that data quality is consistent across channels and rework is reduced.	Expected Result: Intake data is standardized considering all package and non-packaged products with flexibility for Marketing to input or adjust terms. Quotations are created from a consistent minimum dataset. Acceptance Criteria: 1. System supports a standardized capture template for intake. 2. Validation checks confirm completeness prior to quotation creation/submission. 3. Template versioning is maintained.	Must have
BRNB.022	BRNB.022	System	I want workflow stage definitions and allow transitions (i.e. placement, booking, issuance) so that workflow routing, ownership, and reporting are consistent.	Expected Result: Each workflow stage (e.g., placement, booking, issuance, etc.) has a clearly defined meaning and purpose. Only approved and valid transitions between stages are allowed. Workflows are automatically routed to the correct team or owner based on the current stage. Workflow routing, ownership responsibilities, and reporting accuracy are clear and consistent across stages without ambiguity or misinterpretation. Acceptance Criteria: 1. Stage list is defined (i.e. placement, booking, issuance, endorsement, etc.). 2. Allowed transitions are defined and enforced. 3. Current stage is visible and reportable. 4. Each stage/status change is automatically timestamped. 5. Each stage/status change records the responsible user or system action that triggered the change.	Must have
BRNB.115	BRNB.022	All users	I want to be able to see and track the status of each account so that I have clear visibility of progress, know where each account currently stands, and can act promptly when needed.	Expected Results: Each account has a clear, up-to-date status at every stage from quotation to booking. Users can easily see the status and progression history of an account. Status information is consistent across screens, reports, and downstream processes. Delays or stalled accounts are easily	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				identified. Status reports should be available for download and audit, showing all status changes per quotation/proposal and activities. Acceptance Criteria: 1. Account status is visible at all stages 2. Status updates automatically as the account progresses through the lifecycle. 3. Users can view both current and previous statuses for an account. 4. Status definitions are consistent and clearly understood across the system. 5. Each status change is timestamped and records the responsible user or system action. 6. Status tracking is included in system-generated reports (e.g., report showing current status of each account, placement summary report, matched/unmatched payments report). 7. Users can download status reports. 8. Only authorized users can view or modify status information.	
BRNB.069	BRNB.069	Processing User	I want to be able to generate placement files/slips. I want explicit rules on when placement may be generated so that premature placement and insurer rejection leading to rework are avoided.	Expected Result: System should be able to automatically generate placement file. Placement is generated only when prerequisites are satisfied. System must allow users to re-generate placement slip as needed (i.e., for returned account/s, etc.). System must allow batch or individual placement file/Slip generation. Acceptance Criteria: 1. Workflow defines prerequisites for placement generation. 2. System prevents placement generation when conditions are unmet. 3. Placement creation is auditable.	Must have

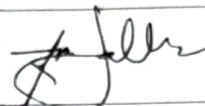

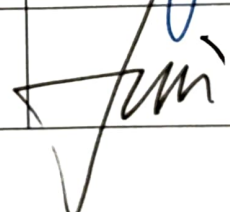

Approval

This document has been approved as the official Business Requirements Document for the New Business

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Addendum¹: Business Requirements for BDOI Other Lines

Purpose

This addendum extends the scope of the NB Fire and Motor BRD to include Other Lines products under BDOI. These products follow the same workflow and system architecture as Fire and Motor lines, with minor product-specific configurations.

No changes to the core workflow are required as all Other Lines products follow the same workflow as Fire and Motor:

- Policy creation and endorsement
- Risk assessment and underwriting
- Document issuance and client notification
- Integration with BDOI systems for tracking and reporting

Refer to [Annex](#) for the list of Other Lines Risk Codes and Product Lines.

The purpose of non-package product maintenance is to automate and secure the placement process, allowing marketing to submit and track requests directly in the system. This ensures efficient preparation, validation, and approval of proposals, enhances reporting and document security, maintains a complete audit trail, and integrates seamlessly with BDOI systems to reduce manual work and improve data accuracy.

Summary of Key Changes and Additions:

- **Scope Extension:**
The addendum expands the coverage of the original BRD to include Other Lines products, ensuring these follow the same workflow and system architecture as Fire and Motor, with only minor product-specific configurations.
- **New and Enhanced Requirements:**
 - **Inclusion of Other Lines:** System must now support additional product lines (see Annex for full list of risk codes and product lines). - **Reviewed and agreed on November 17, 2025.**

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

- **Non-Package Product Maintenance:** Introduction of automated, secure placement processes for non-package products, allowing direct submission and tracking by Marketing. - **Reviewed and agreed on November 17, 2025.**
- **Updates/Additional Business Requirements:**
 - Addendums for record deletion, editing, approval workflows, status tracking, bulk processing, and enhanced audit trails.
 - Enhanced validation, approval, and notification mechanisms.
 - Expanded document security (encryption/password protection) for all outbound documents.
 - Improved dashboard and reporting features for real-time tracking and compliance.
 - Data retention and archiving policies clarified for logs and historical data.
- **Clarifications and Out-of-Scope Items:**
 - Override requests are now explicitly out-of-scope for New Business (applicable only for Renewals).
 - QPS-specific references have been removed, but unique reference numbers and required reports remain supported.
- **Detailed Revision Log:**

All changes, additions, and review comments are documented in the revision log for traceability.

Table of Business Requirements

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement> for Other Lines					
BRNB.001		System	There must be a capability to include Other Lines products with same workflow as Fire and Motor. See below: 1. Quotation/Proposal Request → Creation → Acceptance 2. Account/Client Creation → Document Upload 3. Search/Update Client & Account 4. Bulk/Individual Processing → Status Tagging 5. Placement File Generation → Sending to Insurer 6. Billing Report Generation → Payment Confirmation 7. Policy Issuance → E-policy Management 8. Reporting & Monitoring	Expected Result: 1. System correctly identifies and categorizes each product line, ensuring that Other Lines products follow the same workflow as Fire and Motor. Acceptance Criteria: 1. Product codes are correctly mapped and validated during policy creation. 2. Workflow steps (quotation, proposal, approval) mirror those for Fire and Motor. Negative Scenario: 1. Report or activity log is created due to incorrect mapping or misclassification.	Must have.
BRNB.002		System	There must be a capability to capture critical fields.	Expected Result: 1. All required fields are captured and stored in the system. Acceptance Criteria: 1. System accepts and stores all product-specific fields without error. 2. No missing or incorrect field entries allowed. Negative Scenario: 1. Missing or incorrect field capture leads to incomplete records.	Must have.
BRNB.003		System	There must be a capability to apply rules based on product type.	Expected Result: 1. System enforces correct validation rules per product type and triggers them appropriately based on input data. Acceptance Criteria: 1. Validation rules are dynamically applied according to product type.	Must have.

² User could be but not limited to Marketing AO, TSU, Processing. User roles and authorization will be further defined in succeeding documentations.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Incorrect data entry is prevented by rule enforcement Negative Scenario: 1. Rules are not applied correctly, allowing invalid data entry.	
BRNB.004		System	There must be a capability to use shared templates with dynamic fields for product-specific data.	Expected Result: 1. Shared templates can be reused across products, with dynamic fields populated based on product-specific data. 2. Documents are generated with accurate product-specific information. Acceptance Criteria: 1. Templates populate correctly with relevant data for each product line. 2. Dynamic fields auto-populate without manual intervention. Negative Scenario: 1. Templates fail to populate fields, resulting in incomplete documents.	Must have.
As a <Persona>, I must be able to <Requirement> for Non-Package					
BRNB.005		User	Create Proposal Request Form with complete information and risk details for quotation to Insurers.	Expected Result: 1. Marketing AO can create and track PRFs in real time, attaching all required supporting documents. 2. PRF is reviewed and approved by Marketing TL/TH/UH before submission to TSU. 3. TSU receives a standardized, complete, and approved PRF; system prevents progression if required details/attachments are missing. 4. PRF is integrated into the TSU workflow for quotation slip generation and negotiation. 5. Deduplication is enforced via unique, sequential reference numbers. 6. Validation rules and shared templates ensure product-specific accuracy and completeness.	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				7. All actions and status changes are logged and notified via the system. Acceptance Criteria: 1. System allows creation, editing, and status tracking of PRFs. 2. All required fields and attachments are present and validated before submission. 3. PRFs cannot be submitted if any required information is missing or if a duplicate reference number is detected. 4. Dynamic validation rules are applied per product type. 5. Shared templates auto-populate product-specific data. 6. System-based notifications are sent for all key actions and status changes. Negative Scenario: 1. PRF is missing required details or attachments, or duplicates exist. 2. TSU cannot proceed due to incomplete or invalid PRF. 3. System allows submission of PRF with missing/incorrect data or without a unique reference number. 4. Manual email notifications are used instead of system-based notifications. 5. Insurer access to the BDOI system is mistakenly enabled.	
BRNB.006		System	Automated generation of reference numbers for Proposal Request Forms.	Expected Result: 1. Each proposal request form is automatically assigned a unique, sequential marketing reference number upon creation. 2. Reference numbers are visible to all relevant users for tracking and management. 3. The assignment process eliminates the need for manual input and ensures traceability across all requests. Acceptance Criteria:	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. The system generates a unique and sequential marketing reference number for every new proposal request form. 2. Reference numbers are automatically assigned without any manual intervention. 3. No two forms are assigned the same reference number. 4. Reference numbers are clearly displayed and accessible to all users involved in the process. 5. The system prevents the creation of a new request if a unique reference number cannot be generated. 6. All reference number assignments are logged for audit purposes. Negative Scenario: 1. Two or more proposal request forms are assigned the same reference number, causing confusion and tracking issues. 2. Reference numbers are skipped, duplicated, or not generated, leading to gaps in traceability. 3. Users are unable to view or retrieve the reference number for a request. 4. Manual editing or override of reference numbers is possible, resulting in inconsistencies. 5. The system allows submission of a request without a reference number.	
BRNB.007		User	Facility to receive/view requests for proposal slip, amend, update, return, or deletion.	Expected Result: 1. Authorized users can view and manage all incoming requests for proposals. 2. Users can receive, review, and track requests. 3. Users can review the reason for return, draft necessary changes, and resubmit as needed. 4. Data is synchronized in real time. 5. Notifications are sent to responsible users when a request is received or actioned. Acceptance Criteria: 1. Users can filter, search, and view requests by type and status.	Must .Ohave.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- View all return requests for quotation slips, including details and reasons for return. - Edit and update the quotation slip as per the feedback or reason for return. - Notifications are sent for new or updated requests. Negative Scenario: - A user cannot see a newly submitted request due to system errors or missing permissions.	
BRNB.008		User	Prepare and send Quotation Slip (QS) to Insurers with applicable terms and conditions.	Expected Result: - The full QS must be generated using complete and validated data from the Proposal Request Form (PRF) submitted by Marketing. - TSU reviews, edits, and approves the QS before sending. - All relevant terms, conditions, and pricing details are included. - The full QS is sent directly to selected insurers via email. - All communications are recorded for audit and compliance. Acceptance Criteria: - QS is generated from validated request data, incorporating all terms, conditions, and pricing. - TSU can edit or enhance QS content before issuance. - QS is reviewed and approved internally before sending. - QS can be sent directly to selected insurers via system email integration. - Audit trail records all communications, including recipient, timestamp, and message content. - Users receive confirmation of successful transmission; QS history is accessible for review and resend if needed. Negative Scenario: - QS is sent missing key terms, conditions, or pricing, leading to insurer confusion or rejection. - QS is sent without internal review or approval. - Communications are not logged, or QS is sent without audit trail.	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. QS is sent to incorrect recipients, or confirmation of transmission is not received. 5. System fails to record or track communications, resulting in compliance gaps.	
BRNB.009		System, User	Facility to key-in terms/feedback from Insurers, editable by authorized Users.	Expected Result: 1. Authorized Users can enter and update feedback or terms received from insurers. 2. Insurer responses are keyed-in, reviewed, and approved. 3. Comparative tables attached and available to authorized Users. Acceptance Criteria: 1. The system allows entry and editing of insurer feedback. 2. Changes are tracked and auditable. Negative Scenario: 1. The system does not save edits, or feedback is overwritten without audit trail.	Must have.
BRNB.010		System	Compile Insurers feedback / approved terms automatically.	Expected Result: 1. System compiles all Insurer responses into a single, accurate, exportable comparative table. Acceptance Criteria: 1. Comparative tables are accurate, reflecting the latest insurer feedback and approved terms. 2. Comparative tables are always up-to-date with any new or amended insurer responses. 3. Comparative tables can be exported in standard formats (e.g., Excel, PDF) for further analysis or sharing. Negative Scenario: 1. Comparative tables are incomplete, missing some insurer responses or approved terms.	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Comparative tables contain inaccuracies, such as outdated or incorrect information. 3. Comparative tables are not generated or cannot be exported, preventing users from reviewing or sharing the compiled feedback.	
BRNB.011		System, User	Generate Placement Update Reports (individual and collective).	Expected Result: 1. Marketing, TSU can generate reports. Acceptance Criteria: 1. Reports include all required data, are timely, and access is restricted by role. Negative Scenario: 1. Reports missing, delayed, or accessible to unauthorized users.	Must have.
BRNB.012		System, User	Dashboard for real-time tracking and reporting.	Expected Result: 1. Dashboard displays request status, reports, and comparative tables. Acceptance Criteria: 1. Users can filter, customize, and export data as per their access level. Negative Scenario: 1. Dashboard not updating, inaccessible, or data is incorrect.	Must have.
BRNB.013		System	Check for document security (password protection/encryption). Example of documents: Quotation Slips (QS) • Proposal Slips (PS) • Advisories • Comparative Tables • Placement Update Reports • Renewal Requests Reports	Expected Result: 1. All outbound documents shared externally from the BDOI system are encrypted or password protected. Acceptance Criteria: 1. Only authorized users can open/download documents. Negative Scenario: 1. Documents are accessible without security, or authorized users are locked out.	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
			Any other supporting documents sent to insurers, clients, or external parties		
BRNB.014		System	Validation and approval workflow enforcement	Expected Result: - System enforces validation checks and multi-level approvals before sending documents. Acceptance Criteria: - Requests or documents cannot be sent without passing validation and approval steps. Negative Scenario: - Request or documents bypass validation, or approval workflow is not enforced.	Must have.
BRNB.015		System	Notification and integration for seamless data flow.	Expected Result: - System notifies users of status changes and integrates with BDOI tracking/reporting. Acceptance Criteria: - Notifications are timely, and data is synchronized with BDOI systems. Negative Scenario: - Notifications not sent, or data not integrated.	Must have.
BRNB.016		System	Ensure audit trail for all actions and changes.	Expected Result: - System logs all actions (creation, edits, approvals, sharing) for traceability. Acceptance Criteria: - Users can review a complete audit trail for any request or document. Negative Scenario: - Actions are not logged, or audit trail is incomplete.	Must have.

BR ID	Process Step #	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.017		User	Generate Proposal Slip for Non-Package placement.	Expected Result: - The Proposal Slip retains all original content, including terms and conditions from the original quotation slip. - TSU (Technical Support Unit) can generate and send Proposal Slips for Non-Package placements only after all required approvals are completed. - All generated Proposal Slips are stored in the system and are easily retrievable for future reference or audit. Acceptance Criteria: - The Proposal Slip is sent to Marketing only after all required approvals and validations have been completed. - All archived Proposal Slips are searchable within the system and are properly tagged for easy identification and retrieval. Negative Scenario: - The Proposal Slip is not generated, is missing required approvals, or is not logged in the system. - Proposal Slips are lost or inaccessible, making it impossible to retrieve them when needed.	Must have.
BRNB.018		System, User	Generate Late Renewal Requests Report.	Expected Result: - System auto-generates reports on late renewals, flags those needing documentation, and restricts access by role. Acceptance Criteria: - Report includes all late renewals, is generated on schedule, and access is restricted by user role. Negative Scenario: - Report is missing, delayed, or accessible to unauthorized users	Must have.

Updates

Table of Business Requirements

Updated column Expected Result/Acceptance Criteria to add more details.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.019		System, User	The system must allow authorized users to delete prospect or account records, provided the records are not yet finalized, posted, or part of an active workflow.	Expected Result: - Authorized users can delete prospect or account records that are still in-process (not validated, posted, or finalized). - The system logs all deletion actions, including user, timestamp, and reason. - Deleted records are removed from active views but retained in the audit trail for compliance. Acceptance Criteria: - Only users with the appropriate role/permission can access the delete function. - The record to be deleted is in an "in-process" state (not finalized, posted, or linked to downstream workflows). - Upon deletion, the system prompts confirmation and reason for deletion. - The system updates the audit log with details of the deletion. - Deleted records do not appear in standard searches or reports but are accessible in audit logs. - Attempting to delete a finalized or posted record is blocked, with a clear error message. Negative Scenario: - A user attempts to delete a record that is already finalized, posted, or part of an active workflow. - A user without proper authorization tries to delete a record. - System fails to log the deletion action.	Must have.
BRNB.020		System	The system must allow authorized users to edit an existing quotation/proposal before it is approved or finalized.	Expected Result: Users can retrieve a draft or unapproved quotation/proposal, make changes to any editable fields (such as coverage, client details, premium, etc.), and save the updated version.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The system tracks all changes and maintains version history. - Edited quotations/proposals remain subject to validation and must be re-submitted for approval. Acceptance Criteria: - Only quotations/proposals in agreed status (i.e. "Draft" or "For Review" status) can be edited. - All mandatory fields must be validated upon editing; errors are flagged and must be resolved before saving. - The system logs the user, timestamp, and details of each edit. - After editing, the quotation/proposal status is updated accordingly to – e.g. "Edited" or "For Review" - and is routed for approval. Negative Scenario: - The system does not allow editing of quotations/proposals. (e.g. in "Approved" or "Finalized" status) - If a user attempts to save with missing or invalid data, the system blocks the save and displays error messages. - If the system fails to save changes or loses version history, the edit is not completed and an error is logged.	
BRNB.021		System	The system must allow authorized approvers to review and approve or reject a quotation/proposal before it is sent to the client or used for account creation.	Expected Result: - Approvers can view the full details and edit history of a quotation/proposal. - Approvers can approve or reject the quotation/proposal, optionally adding comments. - Upon approval, the quotation/proposal status is updated and it becomes available for the next workflow step (e.g., sending to client, account creation). Acceptance Criteria: - Only users with approval rights can access the approval function.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. The system displays all relevant details and edit history for review. 3. Approval or rejection is logged with user, timestamp, and comments. 4. Approved quotations/proposals are locked from further editing and routed to the next workflow. Negative Scenario: 1. Authorized users cannot access the approval function.	
BRNB.022	BRD 1.3.13.1.2	System	The system must automatically track and update the status of each quotation/proposal and all related activities throughout the workflow. Statuses should include, but are not limited to: - Received - In Process - Sent to Client - Accepted - Rejected - Account Created - Submitted for Placement - Booked - Cancelled - Endorsed Each status change must be timestamped and associated with the responsible user or system action. The status history should be viewable in the system for audit and monitoring purposes.	Expected Result: - Users and system should be able to view the current status and full status history of any quotation/proposal or related activity at any time. - Statuses should update automatically based on workflow actions (e.g., sending, acceptance, account creation). - Status reports should be available for download and audit, showing all status changes per quotation/proposal and activity Acceptance Criteria: - The current status and status history for each quotation/proposal and related activity is visible to authorized users. - Statuses are updated automatically by the system when workflow actions occur (e.g., proposal sent, accepted, account created). - Each status change is timestamped and records the responsible user or system action. - Status tracking is included in system-generated reports (e.g., report showing current status of each account, placement summary report, matched/unmatched payments report). - Users can download status reports. - Only authorized users can view or modify status information. Negative Scenario:	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The system fails to update the status after a workflow action (e.g., a quotation is accepted but the status remains "Sent to Client"). - Status history is incomplete or missing timestamps/user information. - Users are unable to view or download status reports. - Unauthorized users can access or modify status information.	
BRNB.023	BRD 1.1.2.1 BRD 1.1.2.1.1 BRD 1.1.2.1.2 BRD 2.1.2.1 BRD 2.1.2.1.1 BRD 2.1.2.1.2	User	II. Receive Quotation/Proposal Request	Expected Result: - The system receives a quotation request for home insurance directly from the HLS. - The received request contains all required data fields. - The system automatically creates a quotation record for each valid request received from HLS. - The process is traceable, with logs showing the source of the request as HLS. Acceptance Criteria: - The system can accept and process quotation requests sent from HLS. - Each quotation request from HLS contains all mandatory fields. - Upon receipt, the system creates a new quotation record. - The system validates the data format and completeness before processing the request. - The process supports both bulk and individual quotation creation as per requirements. Negative Scenario: - A user attempts to upload a quotation request file that is not generated by HLS. - The system checks the source and fails to recognize it as HLS. - The system either rejects the request or flags it for manual review. - No quotation record is created.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.024	BRD 1.1.4.1	User	Receive single or multiple accepted quotation/proposal.	Expected Result: 1. Users can receive one or more accepted quotations/proposals in the system. 2. Users have the capability to upload a file containing updates for single or multiple accepted quotations/proposals. 3. The system allows Users are able to perform manual updating of client status. 4. The system processes the uploaded file and applies the edits to the corresponding quotations/proposals, updating their details as specified. 5. All changes are validated for completeness and correctness before being finalized. 6. The system provides confirmation for each successful update and flags any records with errors for user review. Acceptance Criteria: 1. The system allows users to receive and view single or multiple accepted quotations/proposals. 2. Users can upload a file (e.g., .xlsx) containing updates for one or more accepted quotations/proposals. 3. Each record in the uploaded file is matched to an existing accepted quotation/proposal using a unique identifier (e.g., reference number). 4. The system updates the details of each matched quotation/proposal with the new information from the file. 5. If any record in the file has missing or invalid mandatory fields, the system provides a clear error message and does not update those records. 6. A summary report is generated showing which quotations/proposals were successfully updated and which failed, with reasons for failure. 7. Users can immediately view the updated details in the system.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: - The uploaded file contains records with missing mandatory fields, invalid data types, or unmatched quotation/proposal identifiers. - The system does not update those problematic records and generates an error report listing each failed record and the reason for failure (e.g., "Quotation reference not found," "Mandatory field missing," "Invalid data format"). - Only records that pass validation are updated; others remain unchanged and are flagged for user review. - The user must correct the errors and re-upload the file to update the affected quotations/proposals.	
BRNB.025	BRD 1.1.8.1 BRD 1.2.4.1 BRD 2.1.10.1 BRD 1.1.8.1.1 BRD 2.1.10.1.1 BRD 1.1.8.2 BRD 2.1.10.3 BRD 1.1.8.4 BRD 2.1.10.5 BRD 2.2.1.4.1.1	User	Update Account Edit account/s details Validation of mandatory fields before workflow Save draft of the update Submit update and push to next workflow	Expected Result: - Bulk Upload: - Users can upload a file containing multiple records for existing accounts or quotations. - The system processes the file and updates the details for all matched accounts/quotations in one batch operation. - Confirmation is provided for each successful update, and any records with issues are flagged for review. - Individual Upload: - Users can upload a file (or enter data directly) to update the details of a single existing account or quotation. - The system updates the record immediately and confirms the successful update or flags any issues for correction. Acceptance Criteria: - Bulk Upload: - The system allows users to upload a file (e.g., .xlsx) with multiple account/quotation records for update.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				b. Each record in the file is matched to an existing account/quotation using a unique identifier. c. The system updates all matched records with the new details from the file. d. If any record in the file has missing or invalid mandatory fields, the system provides a detailed error report specifying which records failed and why, without updating those records. e. A summary report is generated showing the number of successful and failed updates. 2. Individual Upload: a. The system allows users to upload a file (or input data) for a single account/quotation update. b. The system matches the record and updates the details if all mandatory fields are present and valid. c. If there are missing or invalid fields, the system displays an error message and does not update the record until corrections are made. d. The user receives immediate confirmation of a successful update. Negative Scenario: 1. Bulk Upload: a. The uploaded file contains one or more records with missing mandatory fields, invalid data types, or unmatched account/quotation identifiers. b. The system does not update those problematic records and generates an error report listing each failed record and the reason for failure (e.g., "Account number not found," "Mandatory field missing," "Invalid data format").	

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				c. Only records that pass validation are updated; others remain unchanged and are flagged for user review. 2. Individual Upload: a. The uploaded file (or entered data) for a single account/quotation is missing mandatory fields or contains invalid data. b. The system displays an error message and does not update the account/quotation. c. The user must correct the errors and re-upload or re-enter the data before the update can proceed.	
BRNB.026	BRD 1.1.9.1 BRD 1.1.9.1.1 BRD 1.1.9.1.2 BRD 1.1.9.1.2.1 BRD 1.1.9.1.2.2 BRD 1.1.9.1.3 BRD 1.1.9.1 BRD 1.1.9.1.1 BRD 1.1.9.1.2 BRD 1.1.9.1.2.1 BRD 1.1.9.1.2.2 BRD 1.1.9.1.3 BRD 1.1.9.1.4 BRD 1.1.9.1.5 BRD 2.1.11.1 BRD 2.1.11.1.1 BRD 2.1.11.1.2 BRD 2.1.11.1.2.1 BRD 2.1.11.1.2.2 BRD 2.1.11.1.3 BRD 2.1.11.1.4 BRD 2.1.11.1.5 BRD 2.2.1.7.1 BRD 2.2.1.7.1.1	User	Upload files/documents (IDF, list of account/s details in excel, epolicy, etc.) I. Upload single or multiple files/documents (.jpg, .xlsx, .ods, .pdf, etc.) II. Create a file name aligned with the source file name ○ Inherit the source file name ○ Nominate a new file name (pre-defined syntax) III. Upload documents with file size aligned with the source file size IV. Link the uploaded files/documents to the designated account(s) V. Remove uploaded files	Expected Result: 1. The system allows authorized users to upload one or more files/documents (e.g., IDF, Excel, epolicy) per account or client. 2. Uploaded files are stored with either the original file name or a user-nominated name (following syntax rules). 3. Files are linked to the correct account/client and can be viewed, downloaded, or removed as needed. 4. The system supports common file types (jpg, .xlsx, .ods, .pdf, etc.) and enforces file size limits as per requirements. 5. Users can remove uploaded files if necessary. Acceptance Criteria: 1. User can upload single or multiple files/documents in supported formats. 2. The system validates file size and type before upload. 3. Uploaded files are correctly linked to the designated account/client. 4. The file name is either inherited from the source or follows the nominated syntax. 5. Users can view, download, and remove uploaded files. 6. The system prevents upload if the file type or size is not allowed, or if the user lacks permission.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
	BRD 2.2.1.7.1.2 BRD 2.2.1.7.1.2.1 BRD 2.2.1.7.1.2.2 BRD 2.2.1.7.1.3 BRD 2.2.1.7.1.4 BRD 2.2.1.7.1.5 BRD 2.3.3.1 BRD 2.3.3.1.1 BRD 2.3.3.1.2 BRD 2.3.3.1.2.1 BRD 2.3.3.1.2.2 BRD 2.3.3.1.3 BRD 2.3.3.1.4 BRD 2.3.3.1.5			7. Uploading files does not degrade system performance beyond the specified response time. Negative Scenario: 1. User attempts to upload an unsupported file type (e.g., .exe). 2. User tries to upload a file exceeding the maximum allowed size. 3. User tries to upload files without linking to an account/client. 4. System fails to link the uploaded file to the correct account/client, resulting in missing documentation. 5. User tries to remove a file but lacks permission. 6. System performance degrades (e.g., slow response, timeouts) when multiple users upload large files simultaneously.	
BRNB.027	BRD 1.2.10.1 BRD 1.2.10.2 BRD 1.2.10.4 BRD 2.2.1.10.1 BRD 2.2.1.10.2 BRD 2.2.1.10.4	System	Booking of accounts (individual or bulk) and processing endorsements (positive financial).	Expected Result: 1. Users can successfully book individual or bulk accounts and process endorsements. 2. Once booking is completed and approved: • GL entry is automatically created and posted on the same date as booking. • Service invoice is generated for applicable income on the same date as booking. 3. All actions (booking, GL entry, invoice generation) are linked and logged in the audit trail with user, timestamp, and transaction reference. Acceptance Criteria: 1. User can: • Book individual accounts manually. • Upload accounts in bulk for booking. • Process positive financial endorsements. 2. System: • Confirms successful booking with a message.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Creates and posts GL entry to correct accounts automatically. - Generates service invoice with correct references. - Records all actions in the audit trail (user ID, date/time, transaction details). 3. If any step fails (GL posting or invoice generation), system displays a clear error and does not finalize booking. Negative Scenario: - Missing or invalid required fields. - System error during GL entry creation or invoice generation. - Failure to post to correct GL account or generate invoice. - Users cannot book individual accounts. - Users cannot upload accounts in bulk. - Users cannot process endorsements.	
BRNB.028	BRD 1.3.1.1.2	System	2. Create bulk quotation/proposal based on source system request details	Expected Result: - Bulk requests source system (see list below) are received and processed by the system, resulting in the creation of multiple quotations/proposals in one operation. - All required fields and supporting documents are mapped and linked to the correct quotation/proposal records. - The system provides confirmation and status feedback for each processed request. - No manual re-entry is required; the process is automated or supported by manual upload as a fallback. Acceptance Criteria: - System can receive bulk requests from source system (e.g. via integration or manual upload). - Each request is mapped to the correct quotation/proposal fields in the system. - Supporting documents are linked to the respective quotations/proposals.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- System validates all required data before creating quotations/proposals. - Bulk upload results in the creation of multiple quotations/proposals in one operation. - Confirmation/status feedback is provided for each processed request. - Duplicate quotations/proposals are prevented (based on unique identifiers). - All integration activities are logged for audit and troubleshooting. - Only authorized users/systems can initiate or access bulk creation features. Negative Scenario: - Source sends bulk requests with missing or invalid fields. - Bulk upload contains duplicate requests. - Supporting documents fail to link to the correct quotation/proposal. - Unauthorized system/user attempts to initiate bulk creation.	
BRNB.029	BRD 1.3.1.1.3	System	Quotation/Proposal creation must require a client code.	Expected Result: - The system allows creation of client code with the minimum fields for client creation. (i.e. minimum data needed for prospect creation) - The system allows users to create and save a quotation/proposal as long as a client code is present, even if other client details are incomplete. - The quotation/proposal record is assigned a unique reference number and can be tracked in the system. - The system clearly flags or tags quotations/proposals where client information is incomplete, for later reconciliation or update. - The system allows users to update and complete the client information on the quotation/proposal record at any time.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				6. All other mandatory fields (e.g., product type, coverage details, property/vehicle information) must be completed at the time of creation. Acceptance Criteria: 1. The system requires a client code (existing or newly generated) before allowing creation and saving of a quotation/proposal. 2. The system allows creation and saving of a quotation/proposal even if other client details are incomplete, as long as the client code is present. 3. The system requires all other mandatory fields (besides full client info) to be completed before saving the quotation/proposal. 4. Quotations/proposals with incomplete client information are clearly flagged in the system. 5. The system provides a function to update and complete client information on the quotation/proposal record. 6. Users can search, view, and manage quotations/proposals with incomplete client information. 7. The system maintains an audit trail of creation and subsequent updates (e.g., when client information is completed). 8. The system prevents booking, policy issuance, or other downstream processes until the quotation/proposal is linked to a client code and all required client information is complete.	
BRNB.030	BRD 1.3.3.1 BRD 1.3.3.3 BRD 1.3.3.6 BRD 2.1.5.1 BRD 2.1.5.3 BRD 2.1.5.6	System	III. Create Client/s	Expected Result: 1. The system allows users to create a new client record if the client does not exist, or update details for existing clients. (e.g., client name, contact details, birthday, identification numbers) 2. All mandatory fields are validated for completeness and correct data type before proceeding. (e.g., client name, contact details, identification numbers)	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				a. Prospect creation b. Client record creation (e.g. before Placement, KYC) 3. The system checks for duplicates using defined deduplication criteria (e.g., Client ID or as per defined and agreed key identifiers). 4. The system flags any invalid or missing information and prevents progression until resolved. 5. Users can upload required supporting documents (e.g., ID, birth certificate), which are stored and linked to the client record. Uploaded files/documents can be received from both internal users (e.g., marketing, processing) and external sources (e.g., clients, insurers). 6. Users can save a draft of the client record and resume editing later. 7. The system generates a unique client code for each new client. 8. Upon successful validation, the client record is automatically pushed to the next workflow (e.g., account creation or quotation processing). Acceptance Criteria: 1. The system checks for existing clients and either creates a new record or updates an existing one, following bank standards. 2. All required fields are present and validated; errors are flagged and must be resolved before saving or progressing. 3. Uploaded documents are accepted in supported formats and linked to the client record. 4. Drafts can be saved, retrieved, and edited. 5. Unique client codes are generated and assigned without duplication. 6. The client record cannot proceed to the next workflow unless all validations pass. 7. The system logs all actions for audit and compliance.	

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. The system allows incomplete or invalid client records to be saved or progressed. 2. The system fails to flag missing or incorrect information. 3. Uploaded documents are not accepted or not linked to the client record. 4. Drafts cannot be saved or retrieved. 5. Duplicate or missing client codes are generated. 6. The client record is not pushed to the next workflow after validation. 7. Updates to existing client details are not performed according to bank standards.	
BRNB.031	BRD 1.1.11.4 BRD 1.2.5.4 BRD 2.1.13.4 BRD 2.2.1.5.4	System, User	Print the needed system generated reports.	Expected Result: 1. The user is able to print any system-generated report that they have access to, directly from the system. 2. The printed report matches the content, format, and filters (e.g., date range, criteria) as displayed or downloaded from the system. 3. The printout is clear, complete, and suitable for operational, audit, or regulatory purposes. 4. The system supports printing in both summary and detailed formats, as required by the business. 5. Printing is available for both standard and dynamically generated (customized) reports. 6. The print function is accessible only to users with the appropriate role-based permissions. Acceptance Criteria: 1. Only users with the appropriate role (e.g., Marketing, Processing, Approver, Admin) can access and print reports relevant to their access level. 2. The print option is visible and enabled only when a report is successfully generated or displayed on screen. 3. The printed report must reflect all data, columns, and formatting as seen in the system preview or download.	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. Any filters or criteria (such as date range, status, or custom fields) applied in the system are reflected in the printout. 5. The printout includes necessary headers, footers, and metadata (e.g., report name, generation date, user, applied filters). 6. The system supports printing from both standard (predefined) and dynamic (user-customized) reports. 7. Reports can be printed in both summary and detailed views, as selected by the user. 8. The print function is intuitive and does not require additional manual formatting by the user. 9. The system provides a print preview before final printing. 10. The printout is legible and formatted for standard paper sizes (e.g., A4, Letter). 11. Printed reports do not display data outside the user's access rights. 12. Sensitive information is handled according to company data privacy and compliance policies. Negative Scenario: 1. The print option is missing or disabled despite having the correct permissions. 2. The printed output is incomplete, missing data, or does not match the on-screen report (e.g., missing columns, incorrect filters). 3. The printout is garbled, poorly formatted, or unreadable. 4. The system prints data that the user should not have access to (security breach). 5. The print function causes the system to crash or freeze. 6. The printout does not include required metadata (e.g., report name, date, filters). 7. The system does not support printing for dynamic/custom reports.	
BRNB.032	BRD 1.3.4.1.3 BRD 1.3.4.1.3 BRD 1.3.14.2	User	The system must prevent the creation of duplicate client/ accounts. Duplicate checking should be applied to Fire, Motor and Other Lines.	Expected Result:	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
	BRD 2.1.8.1.5 BRD 2.3.10.2			- When a user attempts to create a new account, the system checks for existing accounts using unique identifiers (e.g., email, phone number, ID number). - If a duplicate is detected, the system blocks the creation and displays an error message. - If the account creation is part of an endorsement process, the system allows the duplicate creation with proper tagging or approval. Acceptance Criteria: - The system must compare key fields (e.g., Name + Date of Birth, Email, Phone, ID). Detection must occur before saving the new account. - For standard account creation, duplicates must be blocked. For endorsement scenarios, duplicates must be allowed but flagged for review. - Clear error message for blocked duplicates. Confirmation message for endorsement duplicates. - All duplicate attempts must be logged with timestamp, user ID, and reason. Negative Scenario: - A user tries to create a duplicate account without endorsement.	
BRNB.033	BRD 1.1.13.1	XIII. Handle returned placement request	a. Receive returned account/s from Processing user	Expected Result: - User (marketing) should be able to receive returned account/s from Processing. - Users should be able to update account/s details as needed. - Users should be able to add and save comments on the returned account/s. - User should be able to push the account/s to the next workflow after making necessary updates. Acceptance criteria:	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The system displays all returned accounts from the Processing user to the Marketing user. - The Marketing user can view, edit, and update the details of the returned account/s. - The Marketing user can add comments and save them. - The Marketing user can successfully push the updated account/s to the next workflow step. - System notifications are sent to relevant users when accounts are returned. - All actions are logged for audit purposes. Negative Scenario: - The Marketing user cannot see the returned account/s from the Processing user. - The Marketing user cannot update the account/s details. - The Marketing user cannot add or save comments. - The Marketing user cannot push the account/s to the next workflow. - The system fails to notify the Marketing user about the returned account/s. - The returned account/s remain in the Processing queue and are not visible to Marketing.	
BRNB.034	BRD 1.2.6.1	VI. Handle returned placement request	a. Receive returned placement requests from Insurer/s	Result: - Processing users should be able to receive returned placement requests/accounts from the Insurer. - Processing users should be able to update account/s details as required. - Processing users should be able to add and save remarks (e.g., reason for return, special instructions). - Processing users should be able to return the account/s to Marketing AO/TL if needed. - Processing users should be able to receive updated account/s details from Marketing AO/TL and push the account/s to the next workflow. Acceptance Criteria:	Must have

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- The system displays all returned placement requests/accounts from the Insurer to the Processing user. - The Processing user can view, edit, and update the details of the returned account/s. - The Processing user can add and save remarks. - The Processing user can return the account/s to Marketing AO/TL and receive updates back. - The Processing user can push the account/s to the next workflow step. - System notifications are sent to relevant users when accounts are returned from the Insurer. - All actions are logged for audit purposes. Negative Scenario: - The Processing user cannot see the returned account/s from the Insurer. - The Processing user cannot update the account/s details. - The Processing user cannot add or save remarks. - The Processing user cannot return the account/s to Marketing AO/TL. - The Processing user cannot receive updates from Marketing AO/TL. - The Processing user cannot push the account/s to the next workflow. - The system fails to notify the Processing user about the returned account/s. - The returned account/s remain in the Insurer queue and are not visible to Processing, causing process delays.	
BRNB.035	BRD 1.1.14.4.1 BRD 1.4.1.2.1.1.1 BRD 2.1.15.4.1 BRD 2.4.1.2.1.1.1	System, User	- Encrypt and add password before sending (IA) 1.1. Encrypt and add password before sending the e-policy 1. Encrypt and add password before sending (Insurance Advice (For mortgaged accounts)) 1.1. Encrypt and password protect e-policy	Expected Result: - File to be sent out is encrypted and protected by a password. - The password is either a standard assigned value (e.g., a default password) or system-generated following a defined syntax.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. The password is sent to the recipient via a separate email for security. 4. Users can view, download, and send single or multiple e-policies, and all sent documents are encrypted/password-protected. Acceptance Criteria: 1. The System / User must encrypt all e-policy documents before transmission. 2. The System / User must assign a password to each e-policy document, either using a standard convention or a system-generated syntax. 3. The password must be communicated to the recipient in a separately. 4. Users must be able to select single or multiple files for sending, and all selected documents must be encrypted/password-protected. 5. The process must work for both individual and bulk transmissions. 6. The password convention (standard or system-generated) must be documented and consistently applied. Negative Scenario: 1. File is sent without encryption or password protection. 2. The password is not sent to the recipient. 3. The password convention is not followed, resulting in confusion or inability to open the document. 4. Bulk sending fails to encrypt or password-protect all documents. 5. The system fails to generate or assign a password, or the password is incorrect. 6. Recipients are unable to access the e-policy due to missing or incorrect password information.	

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRNB.036	BRD 1.2.10.1 BRD 1.2.10.2 BRD 1.2.10.4 BRD 1.3.14.1 BRD 1.3.14.2 BRD 1.3.14.3 BRD 2.2.1.10.1 BRD 2.2.1.10.2 BRD 2.2.1.10.4 BRD 2.3.10.1 BRD 2.3.10.2 BRD 2.3.10.3	System, User	Distinction and process for individual versus batch account booking, including manual and bulk upload scenarios and related triggers.	Expected Result: - Users can manually select and book individual accounts one at a time. Each account is processed, validated, and posted as a distinct transaction. - Users can upload multiple accounts in bulk and book them together in a single batch process. The system allows selection of multiple accounts for batch booking, which can be triggered at specific times (e.g., end-of-day). - The system supports both manual and bulk booking, ensuring that all selected accounts are processed according to business rules and workflow requirements. Acceptance Criteria: - Book individual accounts manually, with each account validated and posted separately. - Upload and book multiple accounts in bulk, with the ability to select as many accounts as needed for batch processing. - Trigger batch booking at designated times (e.g., end-of-day or as scheduled). - Edit, delete, or modify accounts before booking, whether individually or in bulk. - The system must distinguish between booking for account creation and uploading for other purposes, ensuring correct workflow routing. - All booked accounts (individual or batch) must be processed, validated, and posted according to defined business rules. - The process must allow for confirmation and cancellation actions before final booking. Negative Scenario: - User cannot book an individual account due to system error, missing validation, or incorrect data entry.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Bulk upload fails to process all selected accounts, or some accounts are not booked due to system issues, incorrect formatting, or validation errors. - Batch booking does not trigger at the scheduled time, or accounts are not processed as expected. - Users are unable to edit, delete, or modify accounts prior to booking, or changes are not saved/applied correctly.	
BRNB.037	BRD 1.1.11.2 BRD 1.2.5.2 BRD 2.1.13.2 BRD 2.2.1.5.2 BRD 3.1.4.2	System	Facility to allow Users to download the needed system generated reports.	Expected Result: - The user should be able to download the needed system generated reports. (e.g. xlsx, xml, ods, csv) - The downloaded reports should contain accurate, up-to-date data as per the selected parameters (e.g., date range, report type). - The process should be seamless, with the file being saved to the user's chosen location without errors. - The report should be readable and formatted according to the organization's standards. Acceptance Criteria: - The system must allow users to download reports in the agreed and defined formats. - Only users with the appropriate role (e.g., Marketing User, Processing User, Approver, Business Administrator) can access and download the reports. - Users can select a date range for the report before downloading. - Upon request, the report is generated and downloaded without system errors or data loss. - The downloaded file opens correctly and contains the expected data. - Users can save the report to a designated folder/location. - The action of downloading reports is logged for audit purposes (if required by policy). Negative Scenario: - The system encounters an internal error during report generation.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. The file format is not supported or is corrupted. 3. The user does not have sufficient permissions due to a misconfigured role. 4. The report contains no data due to incorrect filters or system issues.	
BRNB.038		System	The system must support direct booking of accounts without requiring placement or intermediary steps, enabling users to create, upload, and book accounts individually or in bulk, with all necessary validations, document management, and reporting.	Expected Result: 1. Accounts are successfully created and booked directly in the system, with all required information and documents validated and attached. 2. Bulk uploads result in multiple accounts being booked in one operation, with each account linked to its supporting documents. 3. System generates confirmation and operational reports for all direct bookings, accessible by authorized users. 4. No manual intervention or placement process is required for direct booking. 5. All actions are logged for audit and compliance. Acceptance Criteria: 1. Users can create and book an account directly, without placement workflow. 2. Users can upload single or multiple supporting documents per account. 3. System validates all required fields (e.g., client info, account details, documents). 4. Bulk upload facility allows booking of multiple accounts in one operation. 5. Each uploaded document is correctly linked to its respective account. 6. System generates a confirmation message for each successful booking. 7. Reports on direct bookings are available, filterable by date, status, and user. 8. Only authorized users can access direct booking features. 9. All actions (create, upload, book) are logged for audit purposes.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				10. System prevents duplicate booking of the same account (based on unique identifiers). Negative Scenario: 1. User attempts to book an account with missing required fields or documents. 2. Users try to bulk upload accounts, but some records have invalid or incomplete data. 3. Unauthorized users try to access direct booking functionality. 4. Duplicate booking attempt (same account details). System fails to link uploaded documents to the correct account.	
BRNB.039	BRD 1.3.2.2	System	Accept manually uploaded account/s for bulk processing .	Expected Result 1. The system allows users to upload a standardized template file (e.g., Excel) containing multiple account records for bulk processing. 2. Each uploaded file is validated against the latest approved template, ensuring all required fields are present and formatted correctly. 3. The system processes all valid records in the file, creating or updating accounts in bulk, and provides a summary of successful and failed records. 4. Users receive immediate feedback on the upload status, including details of any errors for records that failed validation. Acceptance Criteria 1. The system only accepts uploads that use the current standardized template for bulk account processing. 2. All mandatory fields (as defined in the template) must be present and correctly formatted for each record in the file. 3. The system validates the uploaded file before processing: a. If all records are valid, the system processes the entire batch and confirms successful upload.	Must have.

BR ID	Source BRD #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				b. If some records are invalid, the system processes only the valid records and generates an error report listing the failed records and reasons for failure. 4. Users can download the standardized template directly from the system. 5. The system supports commonly agreed file formats (e.g., .xlsx, .csv) for uploads. 6. A summary report is generated after each upload, showing the number of accounts successfully processed and those that failed, with error details. Negative Scenario 1. A user attempts to upload a file that does not use the standardized template (e.g., missing required columns, incorrect headers, or wrong file format). 2. The system rejects the upload and displays a clear error message indicating the template mismatch or missing/invalid fields. 3. No accounts are processed from the rejected file. 4. If only some records in the file are invalid, the system processes the valid records but provides an error report specifying which records failed and why. 5. The user must correct the errors in the file and re-upload using the standardized template before the accounts can be processed.	

Usage Requirements

Data Retention and Archiving					
Refer to how long data is stored, how it is managed overtime, and when it is moved to long-term storage or deleted, based on the business needs and legal/compliance requirements.					
Data	Retention Period	Archival Period	Backup Frequency	Accessibility	Backup Retention Period
	(Data-In-Use / Online)	(Data-at-Rest / Offline)			
Application Logs	5 Years	15 years	Every 4 hours	Online (5 years) Offline (up to 15 years)	5 Years
Database Logs	5 Years	15 years	Every 4 hours	Online (5 years) Offline (up to 15 years)	5 Years
Audit Logs (System Level and Secure logs)	5 Years	15 years	Every 4 hours	Online (5 years) Offline (up to 15 years)	5 Years
Historical data within database	5 Years	15 years	Every 4 hours	Online (5 years) Offline (up to 15 years)	5 Years

Out-Of-Scope

1. Override is applicable for Renewal but not for New Business.

BRD 1.1.12.1 – 1.1.12.5: Request for an Override
a. Submit single or multiple override request
b. Select an approver
c. Add comment (e.g. reason for the override request, special instruction, etc.)
d. Save a comment
e. Push the account/s to the next workflow
BRD 1.2.9.1 – 1.2.9.5: Request for an Override
a. Submit single or multiple override request
b. Select an approver
c. Add comment (e.g. reason for the override request, special instruction, etc.)
d. Save a comment
e. Push the account/s to the next workflow
BRD 2.1.14.1 – 2.1.14.5: Request for an Override
a. Submit single or multiple override request
b. Select an approver
c. Add comment (e.g. reason for the override request, special instruction, etc.)
d. Save a comment
e. Push the account/s to the next workflow
BRD 2.2.1.9.1 – 2.2.1.9.5: Request for an Override
a. Submit single or multiple override request
b. Select an approver
c. Add comment (e.g. reason for the override request, special instruction, etc.)
d. Save a comment
e. Push the account/s to the next workflow
BRD 3.4.2.2.13: Assign approve requests function to a specific user profile/role
Result: User should be able to assign approve override requests function to a specific user profile/role
Negative Scenario: User cannot assign approve override requests function to a specific user profile/role

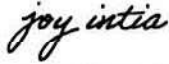

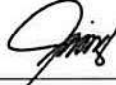

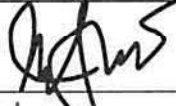

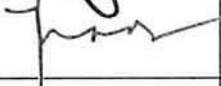

2. The following requirements referencing QPS (Quotation Processing System) are considered out-of-scope. However, a unique reference number will still be generated for each transaction, and all necessary reports will continue to be produced as required. The removal of QPS-specific references does not affect the system's ability to track, report, and manage transactions using unique identifiers and standard reporting formats.

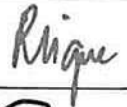

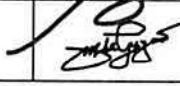

BRD 1.3.5.1.7: QPS Reference Number
BRD 1.3.13.1.3: Placement summary report/QPS Placement Report
BRD 2.3.9.1.3: Placement summary report/QPS Placement Report

Approval

This document has been approved as the official Business Requirements Document for the New Business Fire and Motor.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

10	Personal Accident	a. Individual PA b. Group PA c. Marine PA d. Travel PA
11	Electronic Equipment	
12	Others / Miscellaneous	a. S&T b. PV c. Trade Credit d. Parametric e. Golfer's / Hole-In-One f. Fine Arts g. Jewelers Block

III. Definition Of Terms

Proposal Request Form (PRF)	A standardized document used by the Marketing Account Officer (AO) to formally initiate a placement request for insurance coverage with the Technical Services Unit (TSU). The PRF is sent as an attachment via email to TSU, along with the required underwriting documents. It contains all necessary information about the insurance line, request type, reference number, and the insured's name. The PRF serves as the official intake form for new business (non-package placement) and is referenced throughout the TSU workflow for review, quotation preparation, and subsequent processing steps.
Renewal Requests Report	A scheduled, access-controlled report generated by the Technical Services Unit (TSU) to track insurance renewal requests, particularly those received after the policy's expiry date ("late renewals").

**New Business Fire and Motor
Business Requirements Document (BRD)
Prepared by: Business Project Services (BPS)**

Strictly Confidential and for Internal Use of BDO only

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
12/18/2025	V12182025	Updated BRD IDs to ensure no duplicate among other BRDs	Zean C. Ibay

Purpose

The primary purpose of the recent update to the Business Requirements Document (BRD) was to ensure that no duplicate BRD IDs exist among all BRDs for New Business Fire and Motor. This initiative was undertaken to:

- Standardize and streamline the identification of business requirements across all related documents.
- Eliminate any duplicate or overlapping BRD IDs that may have caused confusion or traceability issues.
- Group similar or related processes under consolidated BRD references for improved clarity and easier cross-referencing.
- Maintain the integrity of the business requirements, processes, and acceptance criteria — no changes were made to the actual content or intent of the requirements.

Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1.#)

Update BRD IDs

BR ID	Reference BRD ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level

User should be able to assign request for hold cover (HC) function to a specific user profile/role. 32. User should be able to assign receive e-policy function to a specific user profile/role. 33. User should be able to assign update e-policy number in the system function to a specific user profile/role. 34. User should be able to assign generate reports function to a specific user profile/role. 35. User should be able to assign send e-policy to client function to a specific user profile/role. 36. User should be able to assign generate list of account/s for individual processing function to a specific user profile/role. 37. User should be able to assign confirm payment function to a specific user profile/role. 38. User should be able to assign book account/s function to a specific user profile/role. 39. User should be able to assign cancel placement function to a specific user profile/role. 40. User should be able to assign manually build accounts for bulk processing function to a specific user profile/role. 41. User should be able to assign access generated insurance advice function to a specific user profile/role. 42. User should be able to assign reactivate cancelled placed accounts function to a specific user profile/role.	

BR ID	Reference BRD ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
					43. User should be able to assign cancelled booking function to a specific user profile/role. 44. User should be able to assign maintain List of Values (LOVs) function to a specific user profile/role. 45. User should be able to assign maintain users function to a specific user profile/role. 46. User should be able to assign submit profile creation/modification requests function to a specific user profile/role. Negative Scenario: 1. User cannot define User profile/role. 2. User cannot create profile for Marketing User. 3. User cannot create profile for Processing User. 4. User cannot create profile for Approver. 5. User cannot create profile for Business Administrator. 6. User cannot create profile for Adjustment User. 7. User cannot assign specific functionality/capability to a user profile/role. 8. User cannot assign receive quotation/proposal request function to a specific user profile/role. 9. User cannot assign create quotation/proposal function to a specific user profile/role. 10. User cannot assign search client function to a specific user profile/role. 11. User cannot assign update client details function to a specific user profile/role. 12. User cannot assign search account/s function to a specific user profile/role. 13. User cannot assign update account/s function to a specific user profile/role. 14. User cannot assign upload files/documents function to a specific user profile/role. 15. User cannot assign view uploaded documents function to a specific user profile/role. 16. User cannot assign access reports function to a specific user profile/role.	

BR ID	Reference BRD ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
					17. User cannot assign request for an override function to a specific user profile/role. 18. User cannot assign handle returned placement request function to a specific user profile/role. 19. User cannot assign access generated insurance advice function to a specific user profile/role. 20. User cannot assign approve override requests function to a specific user profile/role. 21. User cannot assign assign workload to specific user/s function to a specific user profile/role. 22. User cannot assign create bulk quotation/proposal function to a specific user profile/role. 23. User cannot assign generate account/s for bulk processing function to a specific user profile/role. 24. User cannot assign create client/s function to a specific user profile/role. 25. User cannot assign create account/s function to a specific user profile/role. 26. User cannot assign generate billing report (currently applicable for CBG fire) function to a specific user profile/role. 27. User cannot assign validate payment (other market segment) function to a specific user profile/role. 28. User cannot assign generate placement file function to a specific user profile/role. 29. User cannot assign generate insurance advice function to a specific user profile/role. 30. User cannot assign send placement file/slip function to a specific user profile/role. 31. User cannot assign request for hold cover (HC) function to a specific user profile/role. 32. User cannot assign receive e-policy function to a specific user profile/role. 33. User cannot assign update e-policy number in the system function to a specific user profile/role. 34. User cannot assign generate reports function to a specific user profile/role.	

BR ID	Reference BRD ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
					35. User cannot assign send e-policy to client function to a specific user profile/role. 36. User cannot assign generate list of account/s for individual processing function to a specific user profile/role. 37. User cannot assign confirm payment function to a specific user profile/role. 38. User cannot assign book account/s function to a specific user profile/role. 39. User cannot assign cancel placement function to a specific user profile/role. 40. User cannot assign manually build accounts for bulk processing function to a specific user profile/role. 41. User cannot assign access generated insurance advice function to a specific user profile/role. 42. User cannot assign reactivate cancelled placed accounts function to a specific user profile/role. 43. User cannot assign cancelled booking function to a specific user profile/role. 44. User cannot assign maintain List of Values (LOVs) function to a specific user profile/role. 45. User cannot assign maintain users function to a specific user profile/role. 46. User cannot assign submit profile creation/modification requests function to a specific user profile/role.	
BRNB.089	BRD 3.4.3.1 BRD 3.4.3.1		System Administrator	III. Generate Reports a. Generate audit log report b. Export audit log reports as needed	Result: 1. User should be able to assign cancel placement function to a specific user profile/role. 2. User should be able to export audit log reports as needed. Negative Scenario: 1. User cannot assign cancel placement function to a specific user profile/role. 2. User cannot export audit log reports as needed.	Must have.

Approval

This document has been approved as the official Business Requirements Document for the New Business Fire and Motor.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
5/28/2025	V05282025	Initial Version	Roda Lyn Gallardo
6/16/2025	V06162025	Updated the following: • Changed the doer of New Business Fire Billing Report and payment confirmation process from System to Processing Team on the current process • Add the New Business Fire Billing Report and payment confirmation in the envisioned process • Updated the SharePoint folder path of the product matrix • Added the TL confirmation in appendix C	Roda Lyn Gallardo

Business Needs and Requirements

I. Executive Summary (What do you need?)

This document outlines the proposed enhancements to the New Business Fire and Motor processing, with a focus on improving efficiency, accuracy, and automation.

The primary objective is to streamline processes and enhance system capabilities to reduce manual effort, minimize errors, and support scalability as business needs evolve. By automating key workflows, these enhancements will provide a more robust and efficient platform to better support the business functions and future growth.

Business Objective (Why do you need it?)

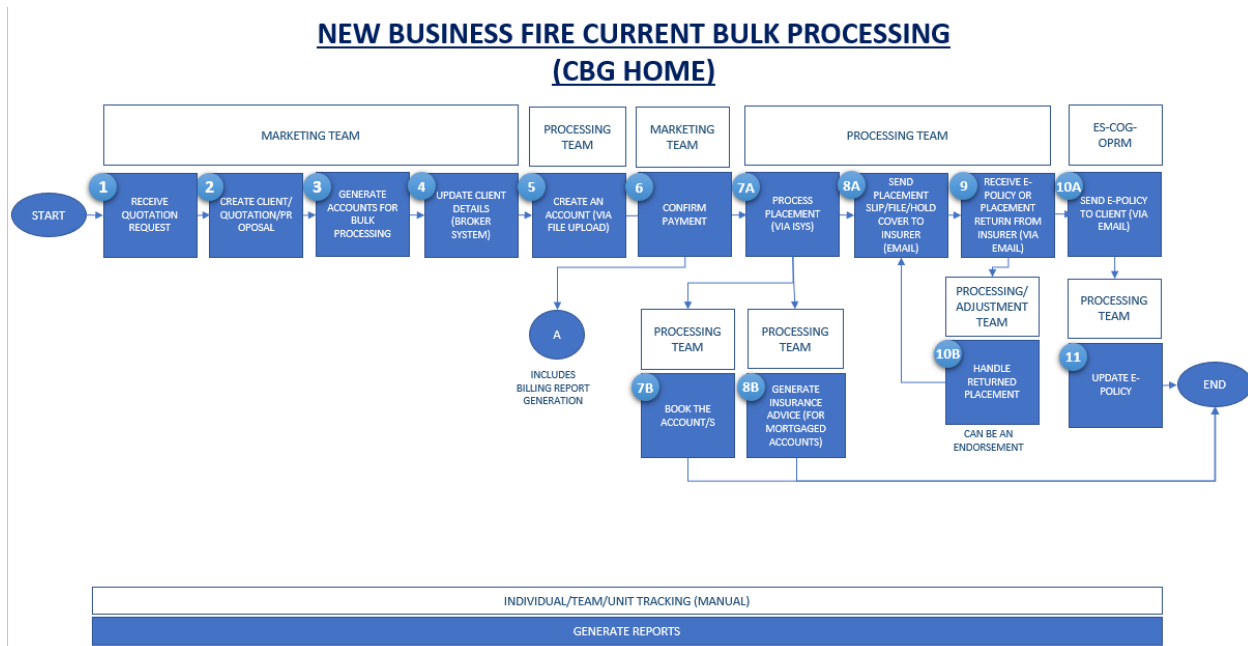

a. Business Goals

- ☐ Revenue
 - ☐ Cost Savings
 - ☐ Compliance/Regulatory Requirement *(attach the related law being addressed)*
 - ☐ Customer Experience
 - ☒ Others:
 1. To enable new business batch processing capability (data upload, direct connection to source system, etc.) across all segments
 2. To automate majority of the process and introduce a system workflow, reducing manual intervention and improving turnaround time
 3. To enhance report generation capabilities to support monitoring, compliance, and strategic decision-making
-

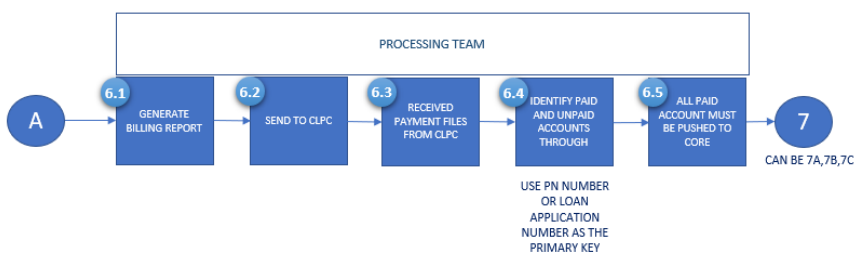

II. What is the current process? (Before)

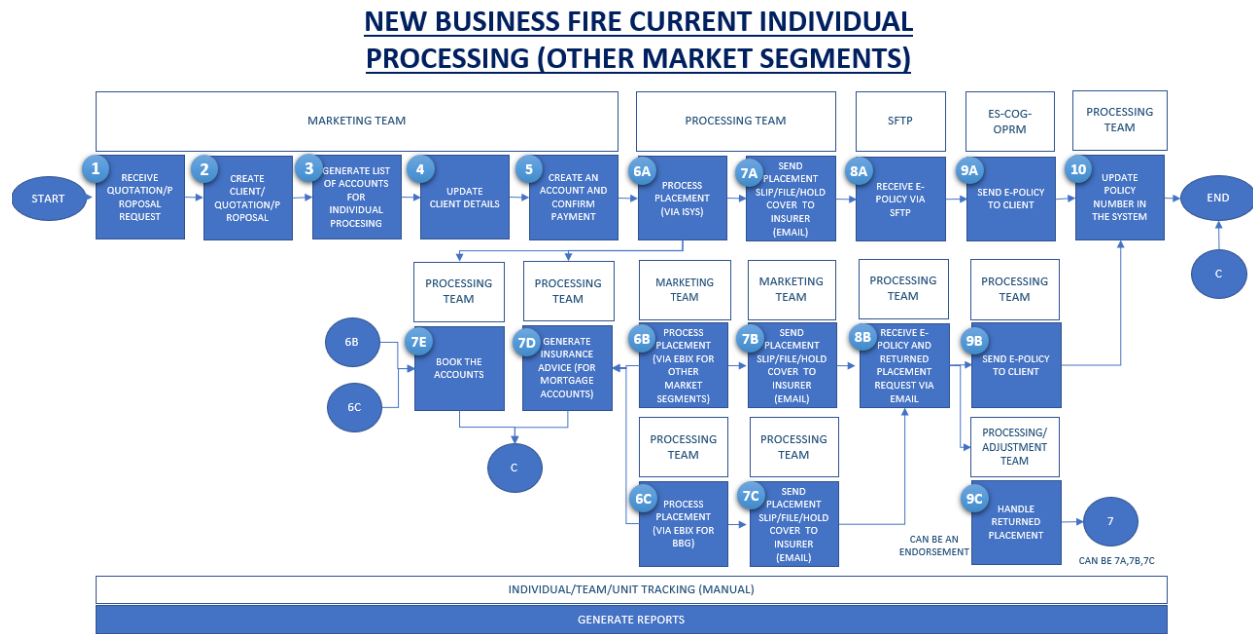

These are the highlights in the current process:

- Most of the processes are manually done which takes time and is prone to error
- Bulk processing is currently being done by CBG Home only
- Status monitoring and reconciliation are done manually
- There is no system workflow and all communications are being done via email

NEW BUSINESS FIRE BILLING REPORT AND PAYMENT CONFIRMATION PROCESS

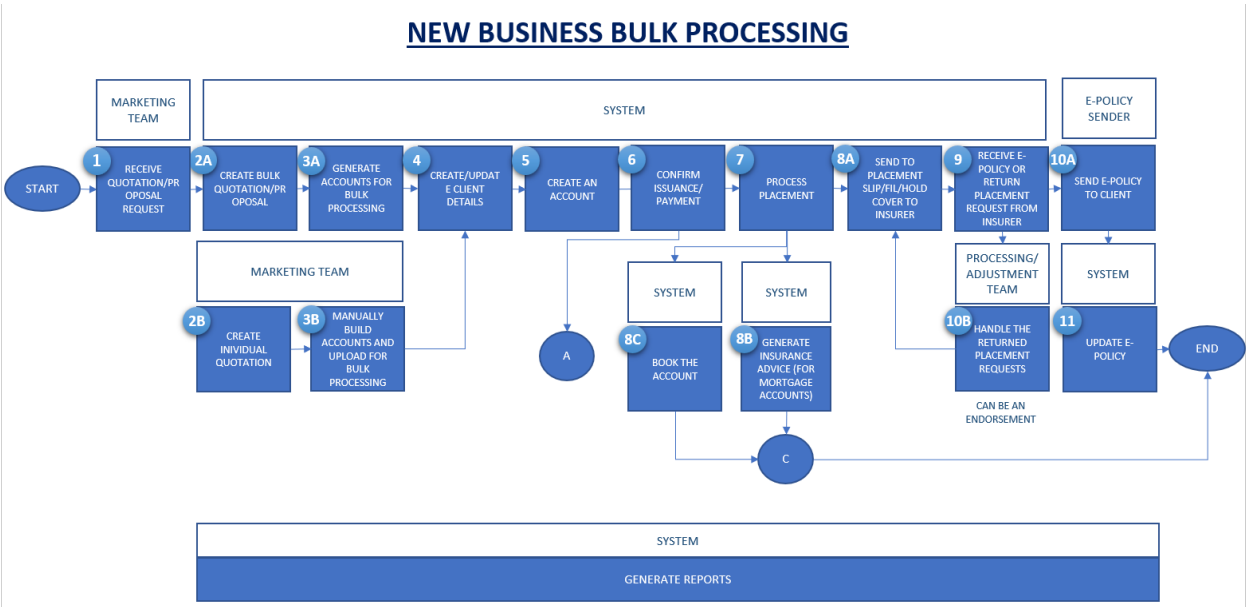

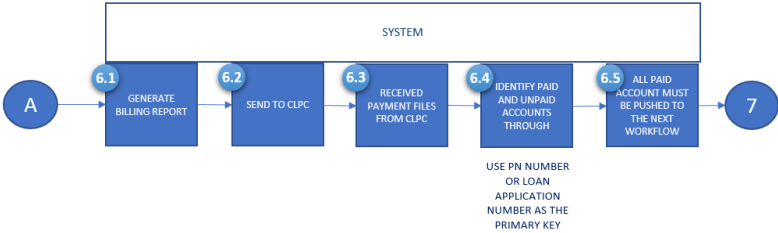

III. What is the envisioned process? (After)

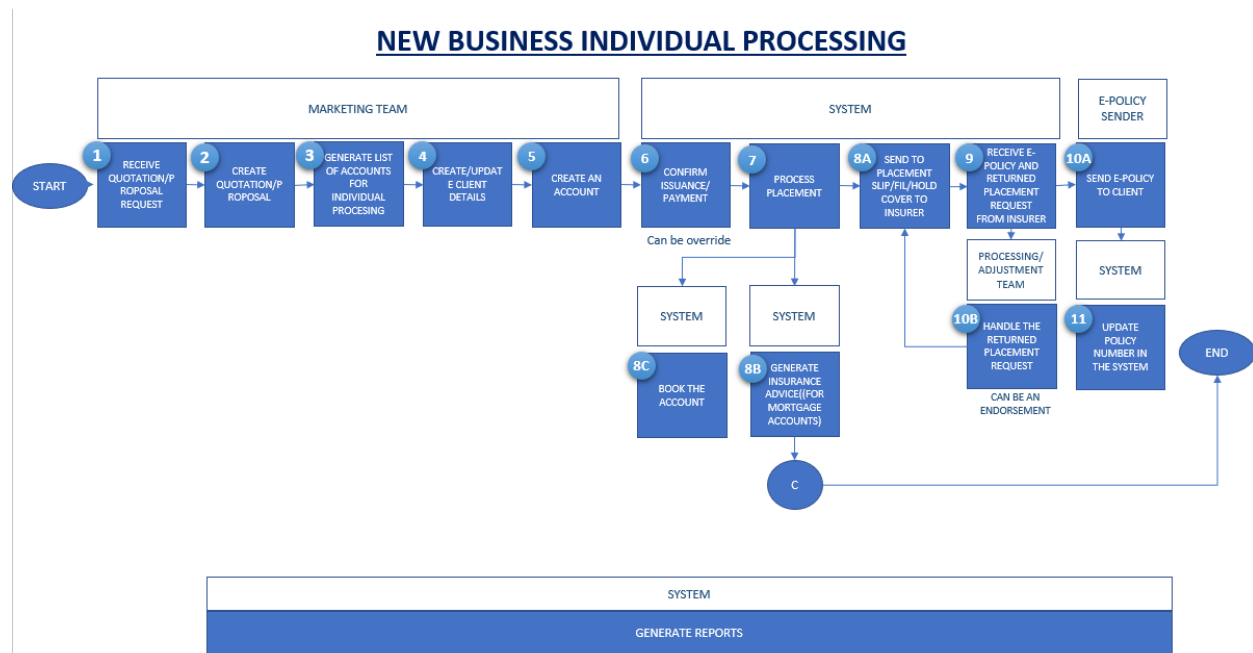

The new process includes the following:

- Standard bulk and individual processing for New Business Fire and Motor across all business segments
- Integration of system workflows to ensure process consistency and efficiency
- Automation of the majority of processing tasks for faster throughput and reduce manual intervention
- System to produce reports for easier monitoring and reconciliation

**NEW BUSINESS FIRE BILLING REPORT AND
PAYMENT CONFIRMATION PROCESS**

IV. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1.#)

Business Key Capabilities:

Business Requirements					
BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BULK PROCESSING					
A. As a Marketing User, I want to be able to...					
BRD 1.1.1.1		I. Log in as a Marketing User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have

BRD 1.1.1. 1.1			1. Log in with a Marketing User profile	Result: User should be able to log in with a Marketing User profile Negative Scenario: User cannot log in with a Marketing User profile	must have
BRD 1.1.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User did not receive the inactivity warning after 15 minutes	must have
BRD 1.1.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User did not receive warning 30 minutes prior to system triggered log out	must have
BRD 1.1.2. 1	1	II. Receive Quotation /Proposal Request	a. Receive quotation/proposal request	Result: User should be able to receive quotation/proposal request Negative Scenario: User cannot receive quotation/proposal request	must have
BRD 1.1.2. 1.1	1		1. via email	Result: User should be able to receive quotation/proposal request via email Negative Scenario: User cannot receive quotation/proposal request via email	must have
BRD 1.1.2. 1.2	1		2. via system triggered request	Result: User should be able to receive quotation/proposal request via system triggered request Negative Scenario: User cannot receive quotation/proposal request via system triggered request	must have
BRD 1.1.3. 1	2B	III. Create Quotation /Proposal	a. Create individual quotation/proposal (IDF - Insurance declaration Form, FFYMI - Free first year motor Insurance, etc.)	Result: User should be able to create individual quotation/proposal Negative Scenario: User cannot create individual quotation/proposal	must have

BRD 1.1.3. 2	2B		b. Generate a quotation/proposal reference number	Result: User should be able to generate quotation/proposal reference number Negative Scenario: User cannot generate quotation/proposal reference number	must have
BRD 1.1.3. 3	2B		c. Send single or multiple quotation/proposal to the intended recipient/s	Result: User should be able to send single or multiple quotation/proposal to the intended recipient/s Negative Scenario: User cannot send single or multiple quotation/proposal to the intended recipient/s	must have
BRD 1.1.4. 1	2B	IV. Manually build accounts for bulk processin g	a. Receive single or multiple accepted quotation/proposal	Result: User should be able to receive single or multiple accepted quotation/proposal Negative Scenario: User cannot receive single or multiple accepted quotation/proposal	must have
BRD 1.1.4. 2	2B		b. Download accepted quotation/proposal in a .pdf and .xlsx format	Result: User should be able to download approved quotation/proposal in a .pdf and .xlsx format Negative Scenario: User cannot download approved quotation/proposal in a .pdf and .xlsx format	must have
BRD 1.1.4. 3	2B		c. Save accepted quotation/proposal	Result: User should be able to save accepted quotation/proposal Negative Scenario: User cannot save accepted quotation/proposal	must have
BRD 1.1.4. 3.1	2B		1. Save in a designated folder location	Result: User should be able to save in a designated folder location Negative Scenario: User cannot save in a designated folder location	must have
BRD 1.1.4. 4	2B		d. Create the list for client creation/update upload	Result: User should be able to create the list for client creation/update upload Negative Scenario: User cannot create the list for client creation/update upload	must have

BRD 1.1.4. 5	2B		e. Upload files/documents for client and account creation/update	Result: User should be able to upload files/documents for client and account creation/update Negative Scenario: User cannot upload files/documents for client and account creation/update	must have
BRD 1.1.5. 1	10B	V. Search Client	a. Search client/s	Result: User should be able to search client/s Negative Scenario: User cannot search client/s	must have
BRD 1.1.5. 1.1	10B		1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 1.1.5. 1.2	10B		2. View the complete details of the client	Result: User should be able to view the complete details of the client Negative Scenario: User cannot view the complete details of the client	must have
BRD 1.1.6. 1	4	VI. Update Client Details	a. Edit Client details	Result: User should be able to edit Client details Negative Scenario: User cannot edit Client details	must have
BRD 1.1.6. 1.1	4		1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should be alerted for invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User is not alerted for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 1.1.6. 2	4		b. Save drafted client update	Result: User should be able to save drafted client update Negative Scenario: User cannot save drafted client update	must have
BRD 1.1.6. 3	4		c. Cancel client update	Result: User should be able to cancel client update Negative Scenario: User cannot cancel client update	must have

BRD 1.1.6. 4	4		d. Push client to the next workflow	Result: User should be able to push client to the next workflow Negative Scenario: User cannot push client to the next workflow	must have
BRD 1.1.7. 1	10B	VII. Search Account	a. Search account/s	Result: User should be able to search account/s Negative Scenario: User cannot search account/s	must have
BRD 1.1.7. 1.1	10B		1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 1.1.7. 1.2	10B		2. View the complete details of the account/s	Result: User should be able to view the complete details of the account/s Negative Scenario: User cannot view the complete details of the account/s	must have
BRD 1.1.8. 1	10B	VIII. Update Account	a. Edit account/s details	Result: User should be able to edit account/s details Negative Scenario: User cannot edit account/s details	must have
BRD 1.1.8. 1.1	10B		1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should be able to receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 1.1.8. 1.2	10B		2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: User should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: User cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have

BRD 1.1.8. 1.3	10B		3. Perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	Result: User should be able to perform automatic calculation on identified fields Negative Scenario: User cannot perform automatic calculation on identified fields	must have
BRD 1.1.8. 2	10B		b. Save draft of the update	Result: User should be able to save draft of the update Negative Scenario: User cannot save draft of the update	must have
BRD 1.1.8. 3	10B		c. Cancel account/s update	Result: User should be able to cancel account/s update Negative Scenario: User cannot cancel account/s update	must have
BRD 1.1.8. 4	10B		d. Submit account/s update and push the account/s to the next workflow	Result: User should be able to submit account/s update and push the account/s to the next workflow Negative Scenario: User cannot submit account/s update and push the account/s to the next workflow	must have
BRD 1.1.9. 1	2 to 5	IX. Upload Files/documents	a. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: User should be able to upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.) Negative Scenario: User cannot upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	must have
BRD 1.1.9. 1.1	2 to 5		1. Upload single of multiple files/documents (.jpg, .xlsx, .ods, pdf, etc.)	Result: User should be able to upload single of multiple files/documents Negative Scenario: User cannot upload single of multiple files/documents	must have
BRD 1.1.9. 1.2	2 to 5		2. Create a file name aligned with the source file name	Result: User should be able to create a file name aligned with the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have

BRD 1.1.9. 1.2.1	2 to 5		2.1. Inherit the source file name	Result: User should be able to Inherit the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 1.1.9. 1.2.1	2 to 5		2.2. Nominate a new file name	Result: User should be able to nominate a new file name Negative Scenario: User cannot nominate a new file name	must have
BRD 1.1.9. 1.3	2 to 5		3. Upload documents with file size aligned with the source file size	Result: User should be able to upload files/documents with file size aligned with the source file size Negative Scenario: User cannot upload files/documents with file size aligned with the source file size	must have
BRD 1.1.9. 1.4	2 to 5		4. Link to the designated account/s	Result: User should be able to link the files/documents to the designated account/s Negative Scenario: User cannot link the files/documents to the designated account/s	must have
BRD 1.1.9. 1.5	2 to 5		5. Remove uploaded file	Result: User should be able to remove uploaded file Negative Scenario: User cannot remove uploaded file	must have
BRD 1.1.10 .1	2 to 12	X. View uploaded documents	a. View the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	Result: User should be able to view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.) Negative Scenario: User cannot view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	must have
BRD 1.1.10 .2	2 to 12		b. Download single or multiple documents as needed	Result: User should be able to download single or multiple documents as needed Negative Scenario: User cannot download single or multiple documents as needed	must have

BRD 1.1.10 .3	2 to 12		c. Save single or multiple documents to a designated folder	Result: User should be able to save single or multiple documents to a designated folder Negative Scenario: User cannot save single or multiple documents to a designated folder	must have
BRD 1.1.11 .1		XI. Access Reports (role-based)	a. View the needed system generated reports	Result: User should be able to view the needed system generated reports Negative Scenario: User cannot view the needed system generated reports	must have
BRD 1.1.11 .1.1			1. Select a date range	Result: User should be able to select a date range Negative Scenario: User cannot select a date range	must have
BRD 1.1.11 .2			b. Download the needed system generated reports in a .xlsx and .ods format	Result: User should be able to download the needed system generated reports in a .xlsx and .ods format Negative Scenario: User cannot download the needed system generated reports in a .xlsx and .ods format	must have
BRD 1.1.11 .3			c. Save the needed system generated reports in a designated location	Result: User should be able to save the needed system generated reports in a designated location Negative Scenario: User cannot save the needed system generated reports in a designated location	must have
BRD 1.1.11 .4			d. Print the needed system generated reports	Result: User should be able to print the needed system generated reports Negative Scenario: User cannot print the needed system generated reports	must have
BRD 1.1.11 .5			e. Create dynamic reports	Result: User should be able to create dynamic reports Negative Scenario: User cannot create dynamic reports	nice to have

BRD 1.1.12 .1		XII. Request for an Override	a. Submit single or multiple override request	Result: User should be able to submit a request for an override Negative Scenario: User cannot submit a request for an override	must have
BRD 1.1.12 .2			b. Select an approver	Result: User should be able to select an approver Negative Scenario: User cannot select an approver	must have
BRD 1.1.12 .3			c. Add comment (i.e. reason for the override request, special instruction, etc.)	Result: User should be able to add comment (i.e. reason for the override request, special instruction, etc.) Negative Scenario: User cannot add comment (i.e. reason for the override request, special instruction, etc.)	must have
BRD 1.1.12 .4			d. Save a comment	Result: User should be able to save a comment Negative Scenario: User cannot save a comment	must have
BRD 1.1.12 .5			e. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 1.1.13 .1	10B	XIII. Handle returned placement request	a. Receive returned account/s from Processing user	Result: User should be able to receive returned account/s from Processing user Negative Scenario: User cannot receive returned account/s from Processing user	must have
BRD 1.1.13 .2	10B		b. Update account/s details	Result: User should be able to update account/s details Negative Scenario: User cannot update account/s details	must have
BRD 1.1.13 .2.1	10B		1. Add comment	Result: User should be able to add comments Negative Scenario: User cannot add comments	must have
BRD 1.1.13 .2.2	10B		2. Save a comment	Result: User should be able to save comments Negative Scenario: User cannot save comments	must have

BRD 1.1.13 .3	10B		c. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 1.1.14 .1	8B	XIV. Access generated Insurance Advice	a. Access the system generated Insurance Advice	Result: User should be able to access system generated insurance advice Negative Scenario: User cannot access system generated insurance advice	must have
BRD 1.1.14 .1.1	8B		1. Search Insurance advice	Result: User should be able to search system generated insurance advice Negative Scenario: User cannot search system generated insurance advice	must have
BRD 1.1.14 .1.2	8B		2. View list Insurance advice	Result: User should be able to view the list of generated insurance advice Negative Scenario: User cannot view the list of generated insurance advice	must have
BRD 1.1.14 .1.3	8B		3. View the details of the Insurance advice	Result: User should be able to view the details of generated insurance advice Negative Scenario: User cannot view the details of generated insurance advice	must have
BRD 1.1.14 .2	8B		b. Download the system generated Insurance Advice	Result: User should be able to download the generated insurance advice Negative Scenario: User cannot download the generated insurance advice	must have
BRD 1.1.14 .2.1	8B		1. Select single or multiple system generated Insurance Advice	Result: User should be able to select single or multiple Insurance advice Negative Scenario: User cannot select single or multiple insurance advice	must have

BRD 1.1.14 .2.2	8B		2. Download single or multiple system generated Insurance Advice	Result: User should be able to download single or multiple insurance advice Negative Scenario: User cannot download single or multiple insurance advice	must have
BRD 1.1.14 .3	8B		c. Save single or multiple system generated Insurance Advice to a designated location	Result: User should be able to save single or multiple system generated insurance Advice/s to a designated location Negative Scenario: User cannot save single or multiple system generated insurance Advice/s to a designated location	must have
BRD 1.1.14 .4	8B		d. Send single or multiple system generated Insurance Advice to intended recipient/s	Result: User should be able to send single or multiple system generated insurance advice to intended recipient/s Negative Scenario: User cannot send single or multiple system generated insurance advice to intended recipient/s	must have
BRD 1.1.14 .4.1	8B		1. Encrypt and add password before sending	Result: User should be able to encrypt and add password before sending Negative Scenario: User cannot encrypt and add password before sending	must have
		B. As a Processing User, I want to be able to...			
BRD 1.2.1. 1		I. Log in as a Processing User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 1.2.1. 1.1			1. Log in with a Processing user profile	Result: User should be able to log in with a Processing user profile Negative Scenario: User cannot log in with a Processing user profile	must have
BRD 1.2.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have

BRD 1.2.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot receive warning 30 minutes prior to system triggered log out	must have
BRD 1.2.2. 1		II. Search Client	a. Search client/s	Result: User should be able to search client/s Negative Scenario: User cannot search client/s	must have
BRD 1.2.2. 1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 1.2.2. 1.2			2. View the complete details of the client	Result: User should be able to view the complete details of the client Negative Scenario: User cannot view the complete details of the client	must have
BRD 1.2.3. 1		III. Search Account	a. Search account/s	Result: User should be able to search account/s Negative Scenario: User cannot search account/s	must have
BRD 1.2.3. 1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 1.2.3. 1.2			2. View the complete details of the account/s	Result: User should be able to view the complete details of the account/s Negative Scenario: User cannot view the complete details of the account/s	must have
BRD 1.2.4. 1		IV. Update Account	a. Edit account/s details	Result: User should be able to edit account/s details Negative Scenario: User cannot edit account/s details	must have

BRD 1.2.4. 1.1			1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 1.2.4. 1.2			2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: User should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: User cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have
BRD 1.2.4. 1.3			3. Perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	Result: User should be able to perform automatic calculation on identified fields Negative Scenario: User cannot perform automatic calculation on identified fields	must have
BRD 1.2.4. 2			b. Save draft of the update	Result: User should be able to save draft of the update Negative Scenario: User cannot save draft of the update	must have
BRD 1.2.4. 3			c. Cancel account/s update	Result: User should be able to cancel account/s update Negative Scenario: User cannot cancel account/s update	must have
BRD 1.2.4. 4			d. Submit account/s update and push the account/s to the next workflow	Result: User should be able to submit account/s update and push the account/s to the next workflow Negative Scenario: User cannot submit account/s update and push the account/s to the next workflow	must have

BRD 1.2.5. 1		V. Access Reports (role- based)	a. View the needed system generated reports	Result: User should be able to view the needed system generated reports Negative Scenario: User cannot view the needed system generated reports	must have
BRD 1.2.5. 1.1			1. select a date range	Result: User should be able to select a date range Negative Scenario: User cannot select a date range	must have
BRD 1.2.5. 2			b. Download the needed system generated reports in a .xlsx and .ods format	Result: User should be able to download the needed system generated reports in a .xlsx and .ods format Negative Scenario: User cannot download the needed system generated reports in a .xlsx and .ods format	must have
BRD 1.2.5. 3			c. Save the needed system generated reports in a designated location	Result: User should be able to save the needed system generated reports in a designated location Negative Scenario: User cannot save the needed system generated reports in a designated location	must have
BRD 1.2.5. 4			d. Print the needed system generated reports	Result: User should be able to print the needed system generated reports in a designated location Negative Scenario: User cannot print the needed system generated reports in a designated location	must have
BRD 1.2.5. 5			e. Create dynamic reports	Result: User should be able to create dynamic reports Negative Scenario: User cannot create dynamic reports	nice to have
BRD 1.2.6. 1	10B	VI. Handle returned placement request	a. Receive returned placement requests from Insurer/s	Result: User should be able to receive returned placement requests from Insurer/s Negative Scenario: User cannot receive returned placement requests from Insurer/s	must have

BRD 1.2.6. 2	10B		b. Update account/s details	Result: User should be able to update account/s details Negative Scenario: User cannot update account/s details	must have
BRD 1.2.6. 3	10B		c. Return to Marketing AO/TL	Result: User should be able to return to Marketing AO/TL Negative Scenario: User cannot return to Marketing AO/TL	must have
BRD 1.2.6. 3.1	10B		1. Add remarks (i.e. reason for return, special instruction, etc.)	Result: User should be able to add remarks Negative Scenario: User cannot add remarks	must have
BRD 1.2.6. 3.2	10B		2. Save remarks	Result: User should be able to save remarks Negative Scenario: User cannot save remarks	must have
BRD 1.2.6. 4	10B		d. Receive updated account/s details from Marketing AO/TL	Result: User should be able to receive updated account/s details from Marketing AO/TL Negative Scenario: User cannot receive updated account/s details from Marketing AO/TL	must have
BRD 1.2.6. 5	10B		e. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 1.2.7. 1		VII. Upload Files/docu ments	a. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: User should be able to upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.) Negative Scenario: User cannot upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	must have
BRD 1.2.7. 1.1			1. Upload single or multiple files/documents (.jpg, .xlsx, .ods., pdf, etc.)	Result: User should be able to upload single or multiple files/documents Negative Scenario: User cannot upload single or multiple files/documents	must have

BRD 1.2.7. 1.2			2. Create a file name aligned with the source file name	Result: User should be able to create file name aligned with the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 1.2.7. 1.2.1			2.1. Inherit the source file name	Result: User should be able to Inherit the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 1.2.7. 1.2.2			2.2. Nominate a new file name	Result: User should be able to nominate a new file name Negative Scenario: User cannot nominate a new file name	must have
BRD 1.2.7. 1.3			3. Upload file with file size aligned with the source file size	Result: User should be able to upload file with file size aligned with the source file size Negative Scenario: User cannot upload file with file size aligned with the source file size	must have
BRD 1.2.7. 1.4			4. Link files/documents to the designated account/s	Result: User should be able to link the file/documents to the designated account/s Negative Scenario: User cannot link the file/documents to the designated account/s	must have
BRD 1.2.7. 1.5			5. Remove uploaded file	Result: User should be able to remove uploaded file Negative Scenario: User cannot remove uploaded file	must have
BRD 1.2.8. 1		VIII. View uploaded documents	a. View the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	Result: User should be able to view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.) Negative Scenario: User cannot view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	must have

BRD 1.2.8. 2			b. Download single or multiple documents as needed	Result: User should be able to download single or multiple documents as needed Negative Scenario: User cannot download single or multiple documents as needed	must have
BRD 1.2.8. 3			c. Save single or multiple documents to a designated folder	Result: User should be able to save single or multiple documents to a designated folder Negative Scenario: User cannot save single or multiple documents to a designated folder	must have
BRD 1.2.9. 1		XI. Request for an Override	a. Submit single or multiple override request	Result: User should be able to submit a request for an override Negative Scenario: User cannot submit a request for an override	must have
BRD 1.2.9. 2			b. Select an approver	Result: User should be able to select an approver Negative Scenario: User cannot select an approver	must have
BRD 1.2.9. 3			c. Add comment (i.e. reason for the override request, special instruction, etc.)	Result: User should be able to add comment (i.e. reason for the override request, special instruction, etc.) Negative Scenario: User cannot add comment (i.e. reason for the override request, special instruction, etc.)	must have
BRD 1.2.9. 4			d. Save a comment	Result: User should be able to save a comment Negative Scenario: User cannot save a comment	must have
BRD 1.2.9. 5			e. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 1.2.10 .1	8C	XI. Book account/s	a. Book individual account/s manually	Result: User should be able to book individual account/s Negative Scenario: User cannot book individual account/s	must have

BRD 1.2.10 .2	8C		b. Upload account/s in bulk for booking	Result: User should be able to upload account/s in bulk for booking Negative Scenario: User cannot upload account/s in bulk for booking	must have
BRD 1.2.10 .4	8C		d. Process single or multiple endorsements (positive financial)	Result: User should be able to process endorsements Negative Scenario: User cannot process endorsements	must have
		C. As a System, I want to be able to...			
BRD 1.3.1. 1	2A	I. Create bulk quotation/proposal	a. Create bulk quotation/proposal based on the received requests	Result: System should be able to create bulk quotation/proposal based on the received request Negative Scenario: System cannot create bulk quotation/proposal based on the received request	must have
BRD 1.3.1. 1.1	2A		1. Create bulk quotation/proposal based on the uploaded list of request details	Result: System should be able to create bulk quotation/proposal based on the uploaded list of request details Negative Scenario: System cannot create bulk quotation/proposal based on the uploaded list of request details	must have
BRD 1.3.1. 1.2	2A		2. Create bulk quotation/proposal based on source system request details	Result: System should be able to create bulk quotation/proposal based on source system request details Negative Scenario: System cannot create bulk quotation/proposal based on source system request details	must have
BRD 1.3.1. 1.3	2A		3. Allow quotation/proposal creation without client code	Result: System should be able to allow quotation/proposal creation without client code Negative Scenario: System does not allow quotation/proposal creation without client code	must have
BRD 1.3.1. 2	2A		b. Generate a quotation/proposal reference number	Result: System should be able to generate quotation/proposal reference number Negative Scenario: System cannot generate quotation/proposal reference number	must have

BRD 1.3.2.1	3A	II. Generate accounts for Bulk Processing	a. Automatically generate the account/s for bulk processing from the source system	Result: System should be able to automatically generate the account/s for bulk processing from the source system Negative Scenario: System cannot automatically generate the account/s for bulk processing from the source system	must have
BRD 1.3.2.1.1	3A		1. Sanitize the list based on defined criteria	Result: System should be able to sanitize the list based on defined criteria Negative Scenario: System cannot sanitize the list based on defined criteria	must have
BRD 1.3.2.2	3B		b. Accept manually uploaded account/s for bulk processing	Result: System should be able to accept manually uploaded account/s for bulk processing Negative Scenario: System cannot accept manually uploaded account/s for bulk processing	must have
BRD 1.3.2.2.1	3B		1. Accept different file formats (i.e. .xlsx, .ods, etc.)	Result: System should be able to accept different file formats (i.e. .xlsx, .ods, etc.) Negative Scenario: System cannot accept different file formats (i.e. .xlsx, .ods, etc.)	must have
BRD 1.3.2.2.2	3B		2. Sanitize the list based on defined criteria	Result: System should be able to sanitize the list based on defined criteria Negative Scenario: System cannot sanitize the list based on defined criteria	must have
BRD 1.3.2.3	3A and 3B		c. Push the account/s to next workflow	Result: System should be able to push the account/s to next workflow Negative Scenario: System cannot push the account/s to next workflow	must have
BRD 1.3.3.1	4	III. Create Client/s	a. Automatically create client record if the client is not existing in the system (follow bank standard)	Result: System should be able to automatically create client record if the client is not existing in the system Negative Scenario: System cannot automatically create client record if the client is not existing in the system	must have

BRD 1.3.3.1.1	4		1. Flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: System should flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system. Negative Scenario: System cannot flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). Not all fields were automatically validated by the system.	must have
BRD 1.3.3.2	4		b. Automatically update the client details for existing clients (follow bank standard)	Result: System should be able to automatically update the client details for existing clients Negative Scenario: System cannot automatically update the client details for existing clients	must have
BRD 1.3.3.3	4		c. Receive uploaded files/documents	Result: System should be able to receive upload files/documents (i.e. ID, birth certificate, etc.) Negative Scenario: System cannot receive upload documents (i.e. ID, birth certificate, etc.)	must have
BRD 1.3.3.4	4		d. Save draft of client created	Result: System should be able to save draft of client created Negative Scenario: System cannot save draft of client created	must have
BRD 1.3.3.5	4		e. Generate client codes	Result: System should be able to generate client codes Negative Scenario: System cannot generate client codes	must have
BRD 1.3.3.6	4		f. Push to the next workflow	Result: System should be able to push to the next workflow Negative Scenario: System cannot push to the next workflow	must have
BRD 1.3.4.1	5	IV. Create Account/s	a. Automatically create account/s	Result: System should be able to automatically create account/s Negative Scenario: System cannot automatically create account/s	must have

BRD 1.3.4. 1.1	5		1. Flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: System should flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system. Negative Scenario: System cannot flag invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). Not all fields were automatically validated by the system.	must have
BRD 1.3.4. 1.2	5		2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: System should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: System cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have
BRD 1.3.4. 1.2	5		3. Select currency on amount fields	Result: User should be able to select currency on amount fields Negative Scenario: User cannot select currency on amount fields	must have
BRD 1.3.4. 1.3	5		3. Prevent duplicate account/s creation (except for endorsement)	Result: System should be able to prevent duplicate account/s creation (except for endorsement) Negative Scenario: System cannot prevent duplicate account/s creation (except for endorsement)	must have

BRD 1.3.4. 1.3.1	5		3.1. Fall out if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. Include the existing account reference number in the fall out report.	Result: System should prevent account/s creation if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. Include the existing account reference number in the fall out report. Negative Scenario: System created an account/seven if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. The existing account reference number is not included in the fall out report.	must have
BRD 1.3.4. 1.3.2	5		3.2. Fall out if the client ID, location of risk, item/s to be insured is the same for Fire. Include the existing account/s reference number in the fall out report.	Result: System should prevent account/s creation if the client ID, location of risk and item/s to be insured are the same for Fire. Include the existing account/s reference number in the fall out report. Negative Scenario: System created an account/s even if the client ID, location of risk and item/s to be insured are the same for Fire. The existing account/s reference number is not included in the fall out report.	must have
BRD 1.3.4. 2	5		b. Automatically link the created account/s to the existing client details	Result: System should be able to automatically link the created account/s to the existing client details Negative Scenario: System cannot automatically link the created account/s to the existing client details	must have

BRD 1.3.4. 3	5		c. Receive uploaded files/documents	Result: System should be able to receive uploaded files/documents (i.e. IDF, list of account/s details in excel etc.) Negative Scenario: System cannot receive uploaded file/documents (i.e. IDF, list of account/s details in excel etc.)	must have
BRD 1.3.4. 3.1	5		1. Create a file name aligned with the source file name	Result: System should be able to create a file name aligned with the source file name Negative Scenario: System cannot create a file name aligned with the source file name	must have
BRD 1.3.4. 3.1.1	5		1.1. Inherit the source file name	Result: System should be able to inherit the source file name Negative Scenario: System cannot inherit the source file name	must have
BRD 1.3.4. 3.1.2	5		1.2. Nominate a new file name (pre-defined syntax)	Result: System should be able to nominate a new file name (pre-defined syntax) Negative Scenario: System cannot nominate a new file name (pre-defined syntax)	must have
BRD 1.3.4. 3.2	5		2. Accept file size aligned with the source file size	Result: System should be able to accept File size aligned with the source file size Negative Scenario: System cannot accept file size aligned with the source file size	must have
BRD 1.3.4. 4	5		d. Automatically tag the account/s status (i.e., Submitted for Placement, In-Process, etc.)	Result: System should be able to automatically tag the account/s status (i.e., Submitted for Placement, In-Process, etc.) Negative Scenario: System cannot automatically tag the account/s status (i.e., Submitted for Placement, In-Process, etc.)	must have
BRD 1.3.4. 5	5		e. Automatically save draft of the account/s created in case of interruption	Result: System should be able to save draft of the account/s created in case of interruption Negative Scenario: System cannot save draft of the account/s created in case of interruption	must have

BRD 1.3.4. 6	5		f. Automatically generate reference numbers	Result: System should be able to automatically generate reference numbers Negative Scenario: System cannot automatically generate reference numbers	must have
BRD 1.3.4. 6.1	5		1. Associate quotation/proposal reference number into the created account/s	Result: System should be able to associate quotation/proposal reference number into the created account/s Negative Scenario: System cannot associate quotation/proposal reference number into the created account/s	must have
BRD 1.3.4. 7	5		g. Push account/s to the next workflow	Result: System should be able to push account/s to the next workflow Negative Scenario: System cannot push account/s to the next workflow	must have
BRD 1.3.5. 1	6	V. Generate billing Report (currently applicable for CBG Fire)	a. Automatically generate the billing file containing the following:	Result: System should be able to automatically generate the billing file Negative Scenario: System cannot automatically generate the billing file	must have
BRD 1.3.5. 1.1	6		1. PN Number - source is loan account/s number	Result: PN Number should be part of the billing report Negative Scenario: PN Number is not part of the billing report	must have
BRD 1.3.5. 1.2	6		2. Loan Application Number	Result: Loan Application Number should be part of the billing report Negative Scenario: Loan Application Number is not part of the billing report	must have
BRD 1.3.5. 1.3	6		3. Booking Date - source is inception date	Result: Booking Date should be part of the billing report Negative Scenario: Booking Date is not part of the billing report	must have

BRD 1.3.5. 1.4	6		4. Borrower's Name - source is assured's name	Result: Borrower's Name should be part of the billing report Negative Scenario: Borrower's Name is not part of the billing report	must have
BRD 1.3.5. 1.5	6		5. Originating Unit - source is department code	Result: Originating Unit should be part of the billing report Negative Scenario: Originating Unit is not part of the billing report	must have
BRD 1.3.5. 1.6	6		6. Premium	Result: Premium should be part of the billing report Negative Scenario: Premium is not part of the billing report	must have
BRD 1.3.5. 1.7	6		7. QPS Reference Number	Result: QPS reference number should be part of the billing report Negative Scenario: QPS reference number is not part of the billing report	must have
BRD 1.3.5. 1.8	6		8. BDOI Location - source is BDO insurance and reinsurance brokering branch	Result: BDOI location should be part of the billing report Negative Scenario: BDOI location is not part of the billing report	must have
BRD 1.3.5. 1.9	6		9. Amortized tagging - Y/N based on special CLG Program	Result: Amortized tagging should be part of the billing report Negative Scenario: Amortized tagging is not part of the billing report	must have
BRD 1.3.5. 2	6		b. Save the billing file in a designated folder	Result: System should be able to save the billing file in a designated folder Negative Scenario: System cannot save the billing file in a designated folder	must have
BRD 1.3.5. 2.1	6		1. Save the file in a .xlsx or .ods format	Result: System should be able to save the file in a .xlsx or .ods format Negative Scenario: System cannot save the file in a .xlsx or .ods format	must have

BRD 1.3.5.3	6		c. Automatically forward the billing file to CLPC (Consumer Loans Process Center)	Result: System should be able to automatically forward the billing file to CLPC Negative Scenario: System cannot automatically forward the billing file to CLPC	must have
BRD 1.3.5.4	6		d. Receive the payment report from CLPC (Consumer Loans Process Center)	Result: System should be able to receive the payment report from CLPC Negative Scenario: System cannot receive the payment report from CLPC	must have
BRD 1.3.5.5	6		e. Automatically identify paid and unpaid account/s based payment report from CPLC. Match based on PN Number or Loan application number.	Result: System should be able to automatically identify paid and unpaid account/s based payment report from CPLC. Match based on PN Number or Loan account/s number Negative Scenario: System cannot automatically identify paid and unpaid account/s based payment report from CPLC. Cannot perform matching based on PN Number or Loan account/s number	must have
BRD 1.3.5.6	6		f. Automatically push valid account/s to the next workflow	Result: System should be able to automatically push the account/s to the next workflow Negative Scenario: System cannot automatically push the account/s to the next workflow	must have
BRD 1.3.6	6	VI. Validate payment (Other Market Segment)	a. Identify if the account/s is paid	Result: System should be able to identify if the account/s is paid Negative Scenario: System cannot identify if the account/s is paid	must have
BRD 1.3.6.1	6		1. Match account/s against applicable payment reports (identifier is the reference number)	Result: System should be able to match account/s against applicable payment reports Negative Scenario: System cannot match account/s against applicable payment reports	must have
BRD 1.3.7.1	7	VII. Generate placement file/slip	a. Automatically generate placement file/slip	Result: System should be able to automatically generate placement file Negative Scenario: System cannot automatically generate placement file	must have

BRD 1.3.7. 2	7		b. Re-generate placement file/slip as needed (i.e. for returned placement requests, etc.)	Result: System should be able to re-generate placement slip as needed (i.e. for returned account/s, etc.) Negative Scenario: System cannot re-generate placement slip as needed (i.e. for returned account/s, etc.)	must have
BRD 1.3.8. 1	8B	VIII. Generate Insurance Advice (for mortgaged accounts only)	a. Generate single or multiple Insurance Advice	Result: System should be able to generate insurance advice Negative Scenario: System cannot generate insurance advice	must have
BRD 1.3.9. 1	8A	IX. Send placement file/slip	a. Automatically send placement file/slip to Insurer/s	Result: System should be able to automatically send placement file/slip to Insurer/s Negative Scenario: System cannot automatically send placement file/slip to Insurer/s	must have
BRD 1.3.10. 1	8A	X. Request for Hold Cover (HC)	a. Automatically send a 30 days hold cover request to Insurer/s	Result: System should be able to automatically send a 30 days hold cover request to Insurer/s Negative Scenario: System cannot automatically send a 30 days hold cover request to Insurer/s	must have
BRD 1.3.11. 1	9	XI. Receive e-policy	a. Receive e-policy from Insurer/s	Result: System should be able to receive e-policy from Insurer/s Negative Scenario: System cannot receive e-policy from Insurer/s	must have
BRD 1.3.11. 1.1	9		1. Receive e-policy in a .pdf format	Result: System should be able to receive e-policy in a .pdf format Negative Scenario: System cannot receive e-policy in a .pdf format	must have
BRD 1.3.11. 2	9		b. Save e-policy to the designated folder	Result: System should be able to save e-policy to the designated folder Negative Scenario: System cannot save e-policy to the designated folder	must have

BRD 1.3.12 .1	11	XII. Update e- policy number in the System	a. Automatically update e-policy number in the System	Result: Policy number is automatically updated after receipt of e-policy Negative Scenario: Policy number is not automatically updated after receipt of e-policy	must have
BRD 1.3.12 .2	11		b. Automatically upload e-policy artifacts in the System and link to the account/s	Result: Automatically upload e- policy artifacts in the System and link to the account/s Negative Scenario: e-policy artifacts not automatically updated in the System and is not link to the account/s	must have
BRD 1.3.13 .1		XIII. Generate Reports	a. Generate the following reports in a .xlsx and .ods format:	Result: System should be able to generate reports Negative Scenario: System cannot generate reports	must have
BRD 1.3.13 .1.1			1. Successful and fall out account/s Report per stage	Result: System should be able to generate successful and fall out account/s Report per stage Negative Scenario: System cannot generate successful and fall out account/s Report per stage	must have
BRD 1.3.13 .1.2			2. Report showing the current Status of each account/s	Result: System should be able to generate a report showing the current Status of each account/s Negative Scenario: System cannot generate a report showing the current Status of each account/s	must have
BRD 1.3.13 .1.3			3. Placement summary report/QPS Placement Report which contains the details of the placement file sent to Insurer together with status whether successfully or unsuccessfully sent	Result: System should be able to generate placement summary report/QPS Placement Report which containing the details of the placement file sent to Insurer Negative Scenario: System cannot generate placement summary report/QPS Placement Report which containing the details of the placement file sent to Insurer	must have

BRD 1.3.13 .1.4			4. CLPC Billing Report which contains the list of account/s for billing (currently for CBG Fire only)	Result: System should be able to generate a CLPC Billing Report which contains the list of account/s for billing Negative Scenario: System cannot generate a CLPC Billing Report which contains the list of account/s for billing	must have
BRD 1.3.13 .1.5			5. Report showing the matched and unmatched payments	Result: System should be able to generate a report showing the matched and Unmatched payment Report Negative Scenario: System cannot generate a report showing the matched and Unmatched payment Report	must have
BRD 1.3.13 .1.6			6. Report/dashboard showing the Production Statistics per Region, per Department, per Team, per User (completed versus target per stage if target is applicable)	Result: System should be able to generate a report showing the production statistics per region, per department, per team, per system (count of account/s per stage) Negative Scenario: System cannot generate a report showing the production statistics per region, per department, per team, per system (count of account/s per stage)	must have
BRD 1.3.13 .2			b. Select a date range for the report	Result: System should be able to select the date range for the report Negative Scenario: System cannot select the date range for the report	must have
BRD 1.3.14 .1	12	XIV. Book account/s	a. Automatically book account/s based on the defined criteria	Result: System should be able to automatically book account/s based on the defined criteria Negative Scenario: System cannot automatically book account/s based on the defined criteria	must have
BRD 1.3.14 .2	12		b. Prevent duplicate booking (except for endorsement)	Result: System should be able to prevent duplicate booking Negative Scenario: System cannot prevent duplicate booking	must have

BRD 1.3.14 .3	12		c. Process endorsements (financial and non-financial)	Result: System should be able process financial and non-financial endorsements Negative Scenario: System cannot process financial and non-financial endorsements	must have
		D. As a E-policy Sender, I want to be able to...			
BRD 1.4.1. 1		I. Log in as a E-policy Sender User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 1.4.1. 1.1			1. Log in with an E-policy Sender user profile	Result: User should be able to log in with an E-policy Sender user profile Negative Scenario: User cannot log in with an E-policy Sender user profile	must have
BRD 1.4.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 1.4.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot receive warning 30 minutes prior to system triggered log out	must have
BRD 1.4.1. 2.1	10	II. Send e-policy to client	a. Email e-policy to client	Result: User should be able to email e-policy to client Negative Scenario: User cannot email e-policy to client	must have
BRD 1.4.1. 2.1.1	10		1. Send single or multiple e-policy	Result: User should be able to send single or multiple e-policy Negative Scenario: User cannot send single or multiple e-policy	must have
BRD 1.4.1. 2.1.1. 1	10		1.1. Encrypt and add password before sending the e-policy	Result: User should be able to encrypt and add password before sending the e-policy Negative Scenario: User cannot	must have

				encrypt and add password before sending the e-policy	
BRD 1.4.1. 2.1.1. 2	10		1.2. Attach e-policy on the email	Result: User should be able to attach e-policy on the email Negative Scenario: User cannot attach e-policy on the email	must have
BRD 1.4.1. 2.1.1. 3	10		1.3. Advise client on the password to use (i.e. syntax, etc.)	Result: User should be able to advise client on the password to use (i.e. syntax, etc.) Negative Scenario: User cannot advise client on the password to use (i.e. syntax, etc.)	must have
BRD 1.4.1. 3.1	10	III. Generate Report	a. Generate a report on successfully and unsuccessfully sent e-policies	Result: User should be able to generate a report on successfully and unsuccessfully sent e-policies Negative Scenario: User cannot generate a report on successfully and unsuccessfully sent e-policies	must have
BRD 1.4.1. 3.1.1	10		1. Automatically generate the count and list of successfully sent e-policies	Result: User should be able to automatically generated the count and list of successfully sent e-policies Negative Scenario: User cannot automatically generate the count and list of successfully sent e-policies	must have
BRD 1.4.1. 3.1.2	10		2. Automatically generate the count and list of unsuccessfully sent e-policies with reason for unsuccessful sending	Result: User should be able to automatically generate the count and list of unsuccessfully sent e-policies with reason for unsuccessful sending Negative Scenario: User cannot automatically generate the count and list of unsuccessfully sent e-policies with reason for unsuccessful sending	must have

BRD 1.4.1. 3.2	10		b. Select a date range	Result: User should be able to select a date range of the report Negative Scenario: User cannot select a date range of the report	must have
		INDIVIDUAL PROCESSING			
		A. As a Marketing User, I want to be able to...			
BRD 2.1.1. 1		I. Log in as a Marketing User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 2.1.1. 1.1			1. Log in with a Marketing user profile	Result: User should be able to log in with a Marketing user profile Negative Scenario: User cannot log in with a Marketing user profile	must have
BRD 2.1.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 2.1.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to Receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot Receive warning 30 minutes prior to system triggered log out	must have
BRD 2.1.2. 1	1	II. Receive Quotation /Proposal Request	a. Receive quotation/proposal request	Result: User should be able to receive quotation/proposal request Negative Scenario: User cannot receive quotation/proposal request	must have
BRD 2.1.2. 1.1	1		1. Receive request via Email	Result: User should be able to receive quotation/proposal request via email Negative Scenario: User cannot receive quotation/proposal request via email	must have

BRD 2.1.2. 1.2	1		2. Receive request via system triggered request	Result: User should be able to receive quotation/proposal request via System triggered request Negative Scenario: User cannot receive quotation/proposal request via System triggered request	must have
BRD 2.1.3. 1	2	III. Create Quotation /Proposal	a. Create individual quotation/proposal (IDF, FFYHI, etc.)	Result: User should be able to create individual quotation/proposal (IDF, FFYHI, etc.) Negative Scenario: User cannot create individual quotation/proposal (IDF, FFYHI, etc.)	must have
BRD 2.1.3. 2	2		b. Generate a quotation/proposal reference number	Result: User should be able to generate quotation/proposal reference number Negative Scenario: User cannot generate quotation/proposal reference number	must have
BRD 2.1.3. 3	2		c. Send single or multiple quotation/proposal to the intended recipient/s	Result: User should be able to send single or multiple quotation/proposal to the intended recipient/s Negative Scenario: User cannot send single or multiple quotation/proposal to the intended recipient/s	must have
BRD 2.1.3. 3.1	2		1. Send single or multiple quotation/proposal via email	Result: User should be able to send single or multiple quotation/proposal via email Negative Scenario: User cannot send single or multiple quotation/proposal via email	must have
BRD 2.1.3. 4	2		d. Receive single or multiple accepted quotation/proposal	Result: User should be able to receive single or multiple accepted quotation/proposal Negative Scenario: User cannot receive single or multiple accepted quotation/proposal	must have

BRD 2.1.3.5	2		e. Download accepted quotation/proposal in a .pdf and .xlsx format	Result: User should be able to download quotation/proposal in a .pdf and .xlsx format Negative Scenario: User cannot download quotation/proposal in a .pdf and .xlsx format	must have
BRD 2.1.3.6	2		f. Save accepted quotation/proposal in a designated folder location	Result: User should be able to save accepted quotation/proposal in a designated folder location Negative Scenario: User cannot save accepted quotation/proposal in a designated folder location	must have
BRD 2.1.4.1	3	IV. Generate list of accounts for individual processing	a. Receive email confirmation that client accepts the quotation and would like to proceed	Result: User should be able to receive email confirmation that client accepts the quotation and would like to proceed Negative Scenario: User cannot receive email confirmation that client accepts the quotation and would like to proceed	must have
BRD 2.1.4.2			b. Create a list of accounts for individual processing	Result: User should be able to create a list of accounts for individual processing Negative Scenario: User cannot create a list of accounts for individual processing	must have
BRD 2.1.5.1	4	V. Create client/s	a. Input client details	Result: User should be able to input client details Negative Scenario: User cannot input client details	must have
BRD 2.1.5.1.1	4		1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have

BRD 2.1.5.2	4		b. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: User should be able to upload documents (i.e. ID, birth certificate, etc.) Negative Scenario: User cannot upload documents (i.e. ID, birth certificate, etc.)	must have
BRD 2.1.5.3	4		c. Save draft of client created	Result: User should be able to save draft of client created Negative Scenario: User cannot save draft of client created	must have
BRD 2.1.5.4	4		d. Cancel client creation	Result: User should be able to cancel client creation Negative Scenario: User cannot cancel client creation	must have
BRD 2.1.5.5	4		e. Submit and Generate client code	Result: User should be able to submit and Generate client code Negative Scenario: User cannot submit and Generate client code	must have
BRD 2.1.5.6	4		f. Push client to the next workflow	Result: User should be able to push client to the next workflow Negative Scenario: User cannot push client to the next workflow	must have
BRD 2.1.6.1		VI. Search Client	a. Search client/s	Result: User should be able to search client/s Negative Scenario: User cannot search client/s	must have
BRD 2.1.6.1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 2.1.6.1.2			2. View the complete details of the client	Result: User should be able to view the complete details of the client Negative Scenario: User cannot view the complete details of the client	must have
BRD 2.1.7.1		VII. Update Client Details	a. Edit Client details	Result: User should be able to edit client details Negative Scenario: User cannot edit client details	must have

BRD 2.1.7. 1.1			1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User is not alerted for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 2.1.7. 2			b. Upload documents	Result: User should be able to upload documents (i.e. ID, birth certificate, etc.) Negative Scenario: User cannot upload documents (i.e. ID, birth certificate, etc.)	must have
BRD 2.1.7. 3			c. Cancel client update	Result: User should be able to cancel client update Negative Scenario: User cannot cancel client update	must have
BRD 2.1.7. 4			d. Save draft of the update	Result: User should be able to save draft of the update Negative Scenario: User cannot save draft of the update	must have
BRD 2.1.7. 5			e. Submit update and Push to the next workflow	Result: User should be able to submit update and Push to the next workflow Negative Scenario: User cannot submit update and Push to the next workflow	must have
BRD 2.1.8. 1	5	VIII. Create Account/s	a. Input account/s details	Result: User should be able to input account/s details Negative Scenario: User cannot input account/s details	must have

BRD 2.1.8. 1.1	5		1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 2.1.8. 1.2	5		2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: User should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: User cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have
BRD 2.1.8. 1.3	5		3. Select currency on amount fields	Result: User should be able to select currency on amount fields Negative Scenario: User cannot select currency on amount fields	must have
BRD 2.1.8. 1.4	5		4. Perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	Result: User should be able to perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.) Negative Scenario: User cannot perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	must have
BRD 2.1.8. 1.5	5		5.Prevent duplicate account/s creation (except for endorsement)	Result: System should be able to prevent duplicate account/s creation (except for endorsement) Negative Scenario: System cannot prevent duplicate account/s creation (except for endorsement)	must have

BRD 2.1.8. 1.5.1	5		5.1. Fall out if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. Include the existing account reference number in the fall out report.	Result: System should prevent account/s creation if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. Include the existing account reference number in the fall out report. Negative Scenario: System created an account/seven if the vehicle details (plate number or conduction sticker number or engine number or serial number in Alphanumeric format) is the same (except if the same vehicle details is between CTPL and MTR) for motor. The existing account reference number is not included in the fall out report.	must have
BRD 2.1.8. 1.5.2	5		5.2. Fall out if the client ID, location of risk and item/s to be insured are the same for Fire. Include the existing account/s reference number in the fall out report.	Result: System should prevent account/s creation if the client ID, location of risk and item/s to be insured are the same for Fire. Include the existing account/s reference number in the fall out report. Negative Scenario: System created an account/s even if the client ID, location of risk and item/s to be insured are the same for Fire. The existing account/s reference number is not included in the fall out report.	must have
BRD 2.1.8. 2	5		b. Link the created account/s to the existing client details	Result: User should be able to link the created account/s to the existing client details Negative Scenario: User cannot link the created account/s to the existing client details	must have
BRD 2.1.8. 3	5		c. Upload documents (i.e. IDF, list of account/s details in excel, e-policy etc.)	Result: User should be able to upload documents (i.e. IDF, list of account/s details in excel, e-policy, etc.) Negative Scenario: User cannot upload documents (i.e. IDF, list of account/s details in excel etc.)	must have

BRD 2.1.8. 4	5		d. Automatically tag the account/s status (i.e. Submitted for Placement, In-Process, etc.)	Result: User should be able to automatically tag the account/s status (i.e. Submitted for Placement, In-Process, etc.) Negative Scenario: User cannot automatically tag the account/s status (i.e. Submitted for Placement, In-Process, etc.)	must have
BRD 2.1.8. 5	5		e. Automatically generate reference numbers after successful account/s creation	Result: User should be able to automatically generate reference numbers after successful account/s creation Negative Scenario: User cannot automatically generate reference numbers after successful account/s creation	must have
BRD 2.1.8. 6	5		f. Save draft of the account/s created	Result: User should be able to save draft of the account/s created Negative Scenario: User cannot save draft of the account/s created	must have
BRD 2.1.8. 7	5		g. Cancel account/s creation	Result: User should be able to cancel account/s creation Negative Scenario: User cannot cancel account/s creation	must have
BRD 2.1.8. 8	5		h. Push account/s to the next workflow	Result: User should be able to push account/s to the next workflow Negative Scenario: User cannot push account/s to the next workflow	must have
BRD 2.1.9. 1		IX. Search Account	a. Search account/s	Result: User should be able to search account/s Negative Scenario: User cannot search account/s	must have
BRD 2.1.9. 1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have

BRD 2.1.9. 1.2			2. View the complete details of the account/s	Result: User should be able to view the complete details of the account/s Negative Scenario: User cannot view the complete details of the account/s	must have
BRD 2.1.10 .1		X. Update Account	a. Edit account/s details	Result: User should be able to edit account/s details Negative Scenario: User cannot edit account/s details	must have
BRD 2.1.10 .1.1			1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 2.1.10 .1.2			2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: User should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: User cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have
BRD 2.1.10 .1.3			3. Perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	Result: User should be able to perform automatic calculation on identified fields Negative Scenario: User cannot perform automatic calculation on identified fields	must have
BRD 2.1.10 .2			b. Upload files/documents (i.e. IDF, list of account/s details in excel etc.)	Result: User should be able to upload documents (i.e. IDF, list of account/s details in excel etc.) Negative Scenario: User cannot upload documents (i.e. IDF, list of account/s details in excel etc.)	must have

BRD 2.1.10 .3			c. Save draft of the update	Result: User should be able to save draft of the update Negative Scenario: User cannot save draft of the update	must have
BRD 2.1.10 .4			d. Cancel account/s update	Result: User should be able to cancel account/s update Negative Scenario: User cannot cancel account/s update	must have
BRD 2.1.10 .5			e. Submit account/s update and push the account/s to the next workflow	Result: User should be able to submit account/s update and push the account/s to the next workflow Negative Scenario: User cannot submit account/s update and push the account/s to the next workflow	must have
BRD 2.1.11 .1		XI. Upload Files/docu ments	a. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: User should be able to upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.) Negative Scenario: User cannot upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	must have
BRD 2.1.11 .1.1			1. Upload single of multiple files/documents (.jpg, .xlsx, .ods., pdf, etc.)	Result: User should be able to upload single of multiple files/documents Negative Scenario: User cannot upload single of multiple files/documents	must have
BRD 2.1.11 .1.2			2. Create a file name aligned with the source file name	Result: User should be able to create a file name aligned with the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 2.1.11 .1.2.1			2.1. Inherit the source file name	Result: User should be able to Inherit the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have

BRD 2.1.11 .1.2.2			2.2. Nominate a new file name	Result: User should be able to nominate a new file name Negative Scenario: User cannot nominate a new file name	must have
BRD 2.1.11 .1.3			3. Upload file size aligned with the source file size	Result: User should be able to upload files/documents with file size aligned with the source file size Negative Scenario: User cannot upload files/documents with file size aligned with the source file size	must have
BRD 2.1.11 .1.4			4. Link to the designated account/s	Result: User should be able to link the file/documents to the designated account/s Negative Scenario: User cannot link the file/documents to the designated account/s	must have
BRD 2.1.11 .1.5			5. Remove uploaded file	Result: User should be able to remove uploaded file Negative Scenario: User cannot remove uploaded file	must have
BRD 2.1.12 .1		XII. View uploaded documents	a. View the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	Result: User should be able to view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.) Negative Scenario: User cannot view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	must have
BRD 2.1.12 .2			b. Download single or multiple documents as needed	Result: User should be able to download single or multiple documents as needed Negative Scenario: User cannot download single or multiple documents as needed	must have
BRD 2.1.12 .3			c. Save single or multiple documents to a designated folder	Result: User should be able to save single or multiple documents to a designated folder Negative Scenario: User cannot save single or multiple documents to a designated folder	must have

BRD 2.1.13 .1		XIII. Access Reports (role- based)	a. View the needed system generated reports	Result: User should be able to view the needed system generated reports Negative Scenario: User cannot view the needed system generated reports	must have
BRD 2.1.13 .1.1			1. Select date range	Result: User should be able to select date range Negative Scenario: User cannot select date range	must have
BRD 2.1.13 .2			b. Download the needed system generated reports in a .xlsx and .ods format	Result: User should be able to download the needed system generated reports in a .xlsx and .ods format Negative Scenario: User cannot download the needed system generated reports in a .xlsx and .ods format	must have
BRD 2.1.13 .3			c. Save the needed system generated reports in a designated location	Result: User should be able to save the needed system generated reports in a designated location Negative Scenario: User cannot save the needed system generated reports in a designated location	must have
BRD 2.1.13 .4			d. Print the needed system generated reports in a designated location	Result: User should be able to print the needed system generated reports in a designated location Negative Scenario: User cannot print the needed system generated reports in a designated location	must have
BRD 2.1.13 .5			e. Create dynamic reports	Result: User should be able to create dynamic reports Negative Scenario: User cannot create dynamic reports	nice to have
BRD 2.1.14 .1	10B	XIV. Handle returned placemen t request	a. Receive returned account/s from Processing user	Result: User should be able to receive returned account/s from Processing user Negative Scenario: User cannot receive returned account/s from Processing user	must have

BRD 2.1.14 .2	10B		b. Update account/s details	Result: User should be able to update account/s details Negative Scenario: User cannot update account/s details	must have
BRD 2.1.14 .3	10B		c. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 2.1.15 .1	8B	XV. Access generated Insurance Advice (For mortgage d accounts)	a. Access the system generated Insurance Advice	Result: User should be able to access system generated insurance advice Negative Scenario: User cannot access system generated insurance advice	must have
BRD 2.1.15 .1.1	8B		1. Search Insurance advice	Result: User should be able to search system generated insurance advice Negative Scenario: User cannot search system generated insurance advice	must have
BRD 2.1.15 .1.2	8B		2. View list Insurance advice	Result: User should be able to view the list of generated insurance advice Negative Scenario: User cannot view the list of generated insurance advice	must have
BRD 2.1.15 .1.3	8B		3. View the details of the Insurance advice	Result: User should be able to view the details of generated insurance advice Negative Scenario: User cannot view the details of generated insurance advice	must have
BRD 2.1.15 .2	8B		b. Download the system generated Insurance Advice	Result: User should be able to download the generated insurance advice Negative Scenario: User cannot download the generated insurance advice	must have
BRD 2.1.15 .2.1	8B		1. Select single or multiple system generated Insurance Advice	Result: User should be able to select single or multiple insurance advice Negative Scenario: User cannot select single or multiple insurance advice	must have

BRD 2.1.15 .2.2	8B		2. Download single or multiple system generated Insurance Advice	Result: User should be able to download single or multiple insurance advice Negative Scenario: User cannot download single or multiple insurance advice	must have
BRD 2.1.15 .3	8B		c. Save single or multiple system generated Insurance Advice to a designated location	Result: User should be able to save single or multiple system generated insurance advice/s to a designated location Negative Scenario: User cannot save single or multiple system generated insurance advice/s to a designated location	must have
BRD 2.1.15 .4	8B		d. Send single or multiple system generated Insurance Advice to intended recipient/s	Result: User should be able to send single or multiple system generated insurance advice to intended recipient/s Negative Scenario: User cannot send single or multiple system generated insurance advice to intended recipient/s	must have
BRD 2.1.15 .4.1	8B		1. Encrypt and add password before sending	Result: User should be able to encrypt and add password before sending Negative Scenario: User cannot encrypt and add password before sending	must have
BRD 2.1.16 .1		XVI. Reactivate cancelled placed accounts	a. Select single or multiple cancelled placed accounts	Result: User should be able to select single or multiple cancelled placed accounts Negative Scenario: User cannot select single or multiple cancelled placed accounts	must have
			b. Reactivate the selected accounts	Result: User should be able to reactivate the selected accounts Negative Scenario: User cannot reactivate the selected accounts	must have
			1. Automatically move the account to the next workflow	Result: User should be able to see the account to the next workflow Negative Scenario: User cannot see the account to the next workflow	must have
		B. As a Processing User, I want to be able to...			

BRD 2.2.1.1		I. Log in as a Processing User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 2.2.1.1.1			1. Log in with a Processing user profile	Result: User should be able to log in with a Processing user profile Negative Scenario: User cannot log in with a Processing user profile	must have
BRD 2.2.1.1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 2.2.1.1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to Receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot Receive warning 30 minutes prior to system triggered log out	must have
BRD 2.2.1.2.1		II. Search Client	a. Search client/s	Result: User should be able to search client/s Negative Scenario: User cannot search client/s	must have
BRD 2.2.1.2.1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 2.2.1.2.1.2			2. View the complete details of the client	Result: User should be able to view the complete details of the client Negative Scenario: User cannot view the complete details of the client	must have
BRD 2.2.1.3.1		III. Search Account	a. Search account/s	Result: User should be able to search account/s Negative Scenario: User cannot search account/s	must have

BRD 2.2.1. 3.1.1			1. Search using single or multiple criteria	Result: User should be able to search using single or multiple criteria Negative Scenario: User cannot search using single or multiple criteria	must have
BRD 2.2.1. 3.1.2			2. View the complete details of the account/s	Result: User should be able to view the complete details of the account/s Negative Scenario: User cannot view the complete details of the account/s	must have
BRD 2.2.1. 4.1		IV. Update Account	a. Edit account/s details	Result: User should be able to edit account/s details Negative Scenario: User cannot edit account/s details	must have
BRD 2.2.1. 4.1.1			1. Receive prompt for any invalid or missing information before going to the next workflow (i.e. LOVs, mandatory fields, data type, etc.). All fields should be automatically validated by the system.	Result: User should receive prompt for any invalid or missing information before going to the next workflow. All fields should be automatically validated by the system. Negative Scenario: User does not receive prompt for any invalid or missing information before going to the next workflow. Not all fields were automatically validated by the system.	must have
BRD 2.2.1. 4.1.2			2. Input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	Result: User should be able to input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.) Negative Scenario: User cannot input single or multiple values on identified fields (i.e. PN number, Items Insured, location of risk, etc.)	must have
BRD 2.2.1. 4.1.3			3. Perform automatic calculation on identified fields (i.e. prorata calculation, short term rate, period of insurance, etc.)	Result: User should be able to perform automatic calculation on identified fields Negative Scenario: User cannot perform automatic calculation on identified fields	must have

BRD 2.2.1. 4.2			b. Save draft of the update	Result: User should be able to save draft of the update Negative Scenario: User cannot save draft of the update	must have
BRD 2.2.1. 4.3			c. Cancel account/s update	Result: User should be able to cancel account/s update Negative Scenario: User cannot cancel account/s update	must have
BRD 2.2.1. 4.4			d. Submit account/s update and push the account/s to the next workflow	Result: User should be able to submit account/s update and push the account/s to the next workflow Negative Scenario: User cannot submit account/s update and push the account/s to the next workflow	must have
BRD 2.2.1. 5.1		V. Access Reports (role-based)	a. View the needed system generated reports	Result: User should be able to view the needed system generated reports Negative Scenario: User cannot view the needed system generated reports	must have
BRD 2.2.1. 5.1.1			1. Select a date range	Result: User should be able to select a date range Negative Scenario: User cannot select a date range	must have
BRD 2.2.1. 5.2			b. Download the needed system generated reports in a .xlsx and .ods format	Result: User should be able to download the needed system generated reports in a .xlsx and .ods format Negative Scenario: User cannot download the needed system generated reports in a .xlsx and .ods format	must have
BRD 2.2.1. 5.3			c. Save the needed system generated reports in a designated location	Result: User should be able to save the needed system generated reports in a designated location Negative Scenario: User cannot save the needed system generated reports in a designated location	must have

BRD 2.2.1. 5.4			d. Print the needed system generated reports	Result: User should be able to print the needed system generated reports in a designated location Negative Scenario: User cannot print the needed system generated reports in a designated location	must have
BRD 2.2.1. 5.5			e. Create dynamic reports	Result: User should be able to create dynamic reports Negative Scenario: User cannot create dynamic reports	nice to have
BRD 2.2.1. 6.1	10B	VI. Handle returned placement request	a. Receive returned placement requests from Insurer/s	Result: User should be able to receive returned placement requests from Insurer/s Negative Scenario: User cannot receive returned placement requests from Insurer/s	must have
BRD 2.2.1. 6.2	10B		b. Update account/s details	Result: User should be able to update account/s details Negative Scenario: User cannot update account/s details	must have
BRD 2.2.1. 6.3	10B		c. Return to Marketing AO/TL	Result: User should be able to return to Marketing AO/TL Negative Scenario: User cannot return to Marketing AO/TL	must have
BRD 2.2.1. 6.3.1	10B		1. Add remarks (i.e. reason for return, special instruction, etc.)	Result: User should be able to add remarks Negative Scenario: User cannot add remarks	must have
BRD 2.2.1. 6.3.2	10B		2. Save remarks	Result: User should be able to add remarks Negative Scenario: User cannot add remarks	must have
BRD 2.2.1. 6.4	10B		d. Receive updated account/s details from Marketing User	Result: User should be able to receive updated account/s details from Marketing User Negative Scenario: User cannot receive updated account/s details from Marketing User	must have
BRD 2.2.1. 6.5	10B		e. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot	must have

				push the account/s to the next workflow	
BRD 2.2.1. 7.1		VII. Upload Files/docu ments	a. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: User should be able to upload files/documents Negative Scenario: User cannot upload files/documents	must have
BRD 2.2.1. 7.1.1			1. Upload single of multiple files/documents (.jpg, .xlsx, .ods, pdf, etc.)	Result: User should be able to upload single of multiple files/documents Negative Scenario: User cannot upload single of multiple files/documents	must have
BRD 2.2.1. 7.1.2			2. Create a file name aligned with the source file name	Result: User should be able to create a file name aligned with the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 2.2.1. 7.1.2. 1			2.1. Inherit the source file name	Result: User should be able to Inherit the source file name Negative Scenario: User cannot Inherit the source file name	must have
BRD 2.2.1. 7.1.2. 2			2.2. Nominate a new file name	Result: User should be able to nominate a new file name Negative Scenario: User cannot nominate a new file name	must have
BRD 2.2.1. 7.1.3			3. Upload files/documents with file size aligned with the source file size	Result: User should be able to upload files/documents with file size aligned with the source file size Negative Scenario: User cannot upload files/documents with file size aligned with the source file size	must have
BRD 2.2.1. 7.1.4			4. Link to the designated account/s	Result: User should be able to link the file/documents to the designated account/s Negative Scenario: User cannot link the file/documents to the designated account/s	must have

BRD 2.2.1. 7.1.5			5. Remove uploaded file	Result: User should be able to remove uploaded file Negative Scenario: User cannot remove uploaded file	must have
BRD 2.2.1. 8.1		VIII. View uploaded documents	a. View the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	Result: User should be able to view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.) Negative Scenario: User cannot view the client level and account/s level uploaded documents (i.e. e-policy artifacts, IDs, IDF, etc.)	must have
BRD 2.2.1. 8.2			b. Download single or multiple documents as needed	Result: User should be able to download single or multiple documents as needed Negative Scenario: User cannot download single or multiple documents as needed	must have
BRD 2.2.1. 8.3			c. Save single or multiple documents to a designated folder	Result: User should be able to save single or multiple documents to a designated folder Negative Scenario: User cannot save single or multiple documents to a designated folder	must have
BRD 2.2.1. 9.1		IX. Request for an Override	a. Submit single or multiple override request	Result: User should be able to submit a request for an override Negative Scenario: User cannot submit a request for an override	must have
BRD 2.2.1. 9.2			b. Select an approver	Result: User should be able to select an approver Negative Scenario: User cannot select an approver	must have
BRD 2.2.1. 9.3			c. add comment (i.e. reason for the override request, special instruction, etc.)	Result: User should be able to add comment (i.e. reason for the override request, special instruction, etc.) Negative Scenario: User cannot add comment (i.e. reason for the override request, special instruction, etc.)	must have
BRD 2.2.1. 9.4			d. Save a comment	Result: User should be able to save a comment Negative Scenario: User cannot save a comment	must have

BRD 2.2.1. 9.5			e. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 2.2.1. 10.1	8C	X. Book account/s	a. Book individual account/s manually	Result: User should be able to book individual account/s Negative Scenario: User cannot book individual account/s	must have
BRD 2.2.1. 10.2	8C		b. Upload account/s in bulk for booking	Result: User should be able to upload account/s in bulk for booking Negative Scenario: User cannot upload account/s in bulk for booking	must have
BRD 2.2.1. 10.4	8C		c. Process endorsements (positive financial)	Result: User should be able to process positive financial endorsements Negative Scenario: User cannot process positive financial endorsements	must have
BRD 2.2.1. 11.1	7	X. Cancel Placement	a. Select single or multiple placed accounts	Result: User should be able to select single or multiple placed accounts Negative Scenario: User cannot select single or multiple placed accounts	must have
BRD 2.2.1. 11.2	7		b. Cancel selected placed accounts	Result: User should be able to cancel selected placed accounts Negative Scenario: User cannot cancel selected placed accounts	must have
BRD 2.2.1. 11.2.1	7		1. Add comments	Result: User should be able to add comments (i.e. reason for cancellation, etc.) Negative Scenario: User cannot add comments (i.e. reason for cancellation, etc.)	must have
BRD 2.2.1. 11.2.2	7		2. Save comments	Result: User should be able to save comments Negative Scenario: User cannot save comments	must have
BRD 2.2.1. 11.3	7		c. Automatically tag the accounts as cancelled placement and return to the previous workflow	Result: User should be able to automatically tag the accounts as cancelled placement and return to the previous workflow	must have

				Negative Scenario: User cannot automatically tag the accounts as cancelled placement or cannot return to the previous workflow	
		C. As a System, I want to be able to...			
BRD 2.3.1.1	6	I. Confirm Issuance or payment	a. Identify if client's payment is received	Result: System should be able to identify if client's payment is received Negative Scenario: System cannot identify if client's payment is received	must have
BRD 2.3.1.1.1	6		1. Match against identified payment reports	Result: System should be able to match against identified payment reports Negative Scenario: System cannot match against identified payment reports	must have
BRD 2.3.1.2	6		b. Push account/s to the next workflow if the below payment criteria is met:	Result: System should be able to push account/s to the next workflow if the payment criteria is met Negative Scenario: System cannot push account/s to the next workflow if the payment criteria is met	must have
BRD 2.3.1.2.1	6		1. CBG Fire and Motor - account/s should be paid	Result: For CBG Fire and Motor, system should be able to detect that accounts are paid before pushing to the next workflow Negative Scenario: For CBG Fire and Motor, system cannot detect that accounts are paid before pushing to the next workflow	must have
BRD 2.3.1.2.2	6		2. Other lines - client confirmed to proceed even if no payment yet	Result: For Other lines, system should be able to detect client confirmation even if no payment yet before pushing to the next workflow Negative Scenario: For Other lines, system cannot detect client confirmation even if no payment yet before pushing to the next workflow	must have

BRD 2.3.2. 1	7	II. Generate placement file/slip	a. Automatically generate placement file/slip	Result: System should be able to automatically generate placement file/slip Negative Scenario: System cannot automatically generate placement file/slip	must have
BRD 2.3.2. 2	7		b. Re-generate placement file/slip as needed (i.e. for returned account/s, etc.)	Result: System should be able to re-generate placement file/slip as needed (i.e. for returned account/s, etc.) Negative Scenario: System cannot re-generate placement file/slip as needed (i.e. for returned account/s, etc.)	must have
BRD 2.3.3. 1	6 to 12	III. Upload Files/documents	a. Upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	Result: System should be able to upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.) Negative Scenario: System cannot upload files/documents (i.e. IDF, list of account/s details in excel, e-policy, etc.)	must have
BRD 2.3.3. 1.1			1. Upload single of multiple files/documents (.jpg, .xlsx, .ods, pdf, etc.)	Result: System should be able to upload single of multiple files/documents (.jpg, .xlsx, .ods, pdf, etc.) Negative Scenario: System cannot upload single of multiple files/documents (.jpg, .xlsx, .ods, pdf, etc.)	must have
BRD 2.3.3. 1.2			2. Create a file name aligned with the source file name	Result: User should be able to create a file name aligned with the source file name Negative Scenario: User cannot create a file name aligned with the source file name	must have
BRD 2.3.3. 1.2.1			2.1. Inherit the source file name	Result: System should be able to inherit the source file name Negative Scenario: System cannot inherit the source file name	must have
BRD 2.3.3. 1.2.2			2.2. Nominate a new file name (pre-defined syntax)	Result: System should be able to nominate a new file name (pre-defined syntax) Negative Scenario: System cannot nominate a new file name (pre-defined syntax)	must have

BRD 2.3.3. 1.3			3. Upload files/documents with file size aligned with the source file size	Result: User should be able to upload files/documents with file size aligned with the source file size Negative Scenario: User cannot upload files/documents with file size aligned with the source file size	must have
BRD 2.3.3. 1.4			4. Link to the designated account/s	Result: User should be able to link the file/documents to the designated account/s Negative Scenario: User cannot link the file/documents to the designated account/s	must have
BRD 2.3.3. 1.5			5. Remove uploaded file	Result: User should be able to remove uploaded file Negative Scenario: User cannot remove uploaded file	must have
BRD 2.3.4. 1	8B	IV. Generate Insurance Advice (for mortgage d accounts only)	a. Generate single or multiple Insurance Advice	Result: System should be able to generate insurance advice Negative Scenario: System cannot generate insurance advice	must have
BRD 2.3.5. 1	8A	V. Send placement file/slip	a. Automatically send placement file/slip to Insurer/s	Result: System should be able to automatically send placement file/slip to Insurer/s Negative Scenario: System cannot automatically send placement file/slip to Insurer/s	must have
BRD 2.3.5. 2	8A		b. Resend placement slip to Insurer/s as needed (i.e. for returned account/s, etc.)	Result: System should be able to resend placement slip to Insurer/s as needed (i.e. for returned account/s, etc.) Negative Scenario: System cannot resend placement slip to Insurer/s as needed (i.e. for returned account/s, etc.)	must have
BRD 2.3.6. 1	8A	VI. Request for Hold Cover (HC)	a. Automatically send a 30 days hold cover request to Insurer/s	Result: System should be able to automatically send a 30 days hold cover request to Insurer/s Negative Scenario: System cannot automatically send a 30 days hold cover request to Insurer/s	must have

BRD 2.3.7. 1	9	VII. Receive e- policy	a. Receive e-policy from Insurer/s	Result: System should be able to receive e-policy from Insurer/s Negative Scenario: System cannot receive e-policy from Insurer/s	must have
BRD 2.3.7. 1.1	9		1. Receive e-policy in a .pdf format	Result: System should be able to receive e-policy in a .pdf format Negative Scenario: System cannot receive e-policy in a .pdf format	must have
BRD 2.3.7. 2	9		b. Save e-policy to the designated folder	Result: System should be able to save e-policy to the designated folder Negative Scenario: System cannot save e-policy to the designated folder	must have
BRD 2.3.8. 1	11	VIII. Update e- policy number in the System	a. Automatically update e-policy number in the System	Result: Policy number is automatically updated after receipt of e-policy Negative Scenario: Policy number is not automatically updated after receipt of e-policy	must have
BRD 2.3.8. 2	11		b. Automatically upload e-policy artifacts in the System and link to the account/s	Result: Automatically upload e-policy artifacts in the System and link to the account/s Negative Scenario: e-policy artifacts not automatically updated in the System and is not link to the account/s	must have
BRD 2.3.9. 1		IX. Generate Reports	a. Generate the following reports in a .xlsx and .ods format:	Result: System should be able to generate reports Negative Scenario: System cannot generate reports	must have
BRD 2.3.9. 1.1			1. Successful and fall outs account/s report per stage	Result: System should be able to generate successful and fall out account/s Report per stage Negative Scenario: System cannot generate successful and fall out account/s Report per stage	must have
BRD 2.3.9. 1.2			2. Report showing the current status of each account/s	Result: System should be able to generate a report showing the current Status of each account/s Negative Scenario: System cannot generate a report showing the current Status of each account/s	must have

BRD 2.3.9. 1.3			3. Placement summary report/QPS Placement Report which contains the details of the placement file sent to Insurer together with status whether successfully or unsuccessfully sent	Result: System should be able to generate placement summary report/QPS Placement Report which containing the details of the placement file sent to Insurer Negative Scenario: System cannot generate placement summary report/QPS Placement Report which containing the details of the placement file sent to Insurer	must have
BRD 2.3.9. 1.4			4. CLPC Billing Report which contains the list of account/s for billing (for CBG Fire)	Result: System should be able to generate a CLPC Billing Report which contains the list of account/s for billing (for CBG Fire) Negative Scenario: System cannot generate a CLPC Billing Report which contains the list of account/s for billing (for CBG Fire)	must have
BRD 2.3.9. 1.5			5. Report showing the matched and unmatched payment	Result: System should be able to generate a report showing the matched and unmatched payment Report Negative Scenario: System cannot generate a report showing the matched and unmatched payment Report	must have
BRD 2.3.9. 1.6			6. Report/Dashboard showing the Production Statistics per Region, per Department, per Team, per User (completed versus target per stage if target is applicable)	Result: System should be able to generate a report showing the production statistics per region, per department, per team, per system (completed versus target per stage if target is applicable) Negative Scenario: System cannot generate a report showing the production statistics per region, per department, per team, per system (completed versus target per stage if target is applicable)	must have
BRD 2.3.9. 2			b. Select a date range for the report	Result: System should be able to select a date range for the report Negative Scenario: System cannot select a date range for the report	must have
BRD 2.3.9. 3			c. Create dynamic report	Result: System should be able to create dynamic report Negative Scenario: System cannot create dynamic report	nice to have

BRD 2.3.10 .1	8C	X. Book the account/s	a. Automatically book account/s based on the defined criteria (i.e. after receipt of e-policy, etc.)	Result: System should be able to automatically book account/s based on the defined criteria (i.e. after receipt of e-policy, etc.) Negative Scenario: System cannot automatically book account/s based on the defined criteria (i.e. after receipt of e-policy, etc.)	must have
BRD 2.3.10 .2	8C		b. Prevent duplicate booking (except for endorsement)	Result: System should be able to prevent duplicate booking (except for endorsement) Negative Scenario: System cannot prevent duplicate booking (except for endorsement)	must have
BRD 2.3.10 .3	8C		c. Process endorsements (financial and non-financial)	Result: System should be able to process financial and non-financial endorsements Negative Scenario: System cannot process financial and non-financial endorsements	must have
		D. As a E-policy Sender, I want to be able to...			
BRD 2.4.1. 1		I. Log in as E-policy Sender User	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 2.4.1. 1.1			1. Log in with E-policy Sender user profile	Result: User should be able to log in with E-policy Sender user profile Negative Scenario: User cannot log in with E-policy Sender user profile	must have
BRD 2.4.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 2.4.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot receive warning 30 minutes prior to system triggered log out	must have

BRD 2.4.1. 2.1	10	II. Send e-policy to client	a. Email e-policy to client	Result: User should be able to email e-policy to client Negative Scenario: User cannot email e-policy to client	must have
BRD 2.4.1. 2.1.1	10A		1. Send single or multiple e-policy	Result: User should be able to send single or multiple e-policy Negative Scenario: User cannot send single or multiple e-policy	must have
BRD 2.4.1. 2.1.1. 1	10A		1.1. Encrypt and password protect e-policy	Result: User should be able to encrypt and password protect e-policy Negative Scenario: User cannot encrypt and password protect e-policy	must have
BRD 2.4.1. 2.1.1. 2	10A		1.2. Attach e-policy on the email	Result: User should be able to attach e-policy on the email Negative Scenario: User cannot attach e-policy on the email	must have
BRD 2.4.1. 2.1.1. 3	10A		1.3. Advise client on the password to use (i.e. syntax, etc.)	Result: User should be able to advise client on the password to use (i.e. syntax, etc.) Negative Scenario: User cannot advise client on the password to use (i.e. syntax, etc.)	must have
BRD 2.4.1. 3.1	10A	III. Generate Report	a. Generate a report on successfully and unsuccessfully sent e-policies	Result: User should be able to generate a report on successfully and unsuccessfully sent e-policies Negative Scenario: User cannot generate a report on successfully and unsuccessfully sent e-policies	must have
BRD 2.4.1. 3.1.1	10A		1. Automatically generate count and list of successfully sent e-policies	Result: User should be able to automatically generate the count and list of successfully sent e-policies Negative Scenario: User cannot automatically generate count and list of successfully sent e-policies	must have

BRD 2.4.1. 3.1.2	10A		2. Automatically generate counts and list of unsuccessfully sent e-policies with reason for unsuccessful sending	Result: User should be able to generate count and list of unsuccessfully sent e-policies with reason for unsuccessful sending Negative Scenario: User cannot count and List of unsuccessfully sent e-policies with reason for unsuccessful sending	must have
BRD 2.4.1. 3.2	10A		b. Select a date range of the report	Result: User should be able to select a date range of the report Negative Scenario: User cannot select a date range of the report	must have
		Common for Bulk and Individual Processing			
		A. As an Approver, I want to be able to...			
BRD 3.1.1. 1		I. Log in as an approver	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 3.1.1. 1.1			1. Log in with an Approver profile	Result: User should be able to log in with an Approver profile Negative Scenario: User cannot log in with an Approver profile	must have
BRD 3.1.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 3.1.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot receive warning 30 minutes prior to system triggered log out	must have
BRD 3.1.2. 1		II. Approve requests	a. View requests pending for my approval (i.e. override, LOV updates approval requests, profile creation/modification requests, etc.)	Result: User should be able to view requests pending for approval Negative Scenario: User cannot view requests pending for approval	must have
BRD 3.1.2. 2			b. Review request details	Result: User should be able to review request details Negative Scenario: User cannot review request details	must have

BRD 3.1.2. 3			c. Approve requests	Result: User should be able to approve request Negative Scenario: User cannot approve request	must have
BRD 3.1.2. 4			d. Decline requests	Result: User should be able to decline request Negative Scenario: User cannot decline request	must have
BRD 3.1.2. 5			e. Add comment	Result: User should be able to add comments Negative Scenario: User cannot add comments	must have
BRD 3.1.2. 6			f. Save comment	Result: User should be able to save comments Negative Scenario: User cannot save comments	must have
BRD 3.1.2. 7			g. Push the account/s to the next workflow	Result: User should be able to push the account/s to the next workflow Negative Scenario: User cannot push the account/s to the next workflow	must have
BRD 3.1.3. 1		III. Assign workload to specific User/s	a. View the list of account/s for assignment	Result: User should be able to view the list of account/s for assignment Negative Scenario: User cannot view the list of account/s for assignment	must have
BRD 3.1.3. 2			b. Assign specific workload to user	Result: User should be able to assign specific workload to user Negative Scenario: User cannot assign specific workload to user	must have
BRD 3.1.3. 3			c. Re-assign workload to specific user	Result: User should be able to re-assign workload to specific user Negative Scenario: User cannot re-assign workload to specific user	must have
BRD 3.1.4. 1		IV. Access Reports (role-based)	a. View the needed system generated reports	Result: User should be able to view the needed system generated reports Negative Scenario: User cannot view the needed system generated reports	must have

BRD 3.1.4. 1.1			1. select a date range	Result: User should be able to select a date range Negative Scenario: User cannot select a date range	must have
BRD 3.1.4. 2			b. Download the system generated reports in a .xlsx and .ods format	Result: User should be able to download the system generated reports in a .xlsx and .ods format Negative Scenario: User cannot download the system generated reports in a .xlsx and .ods format	must have
BRD 3.1.4. 3			c. Save the system generated reports in a designated location	Result: User should be able to save the system generated reports in a designated location Negative Scenario: User cannot save the system generated reports in a designated location	must have
BRD 3.1.4. 4			d. Print the system generated reports	Result: User should be able to print the system generated reports in a designated location Negative Scenario: User cannot print the system generated reports in a designated location	must have
BRD 3.1.4. 5			e. Create dynamic reports	Result: User should be able to create dynamic reports Negative Scenario: User cannot create dynamic reports	nice to have
		B. As an Adjustment User, I want to be able to...			
BRD 3.2.1. 1		I. Log in as an approver	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 3.2.1. 1			1. Log in with an Approver profile	Result: User should be able to log in with an Approver profile Negative Scenario: User cannot log in with an Approver profile	must have

BRD 3.2.1. 2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 3.2.1. 3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot receive warning 30 minutes prior to system triggered log out	must have
BRD 3.2.2. 1		II. Cancel Booking	a. Select single or multiple booked account/s for cancellation	Result: User should be able to select single or multiple booked account/s for cancellation Negative Scenario: User cannot select single or multiple booked account/s for cancellation	must have
BRD 3.2.2. 2			b. Cancel selected booked accounts	Result: User should be able to cancel selected booked accounts Negative Scenario: User cannot cancel selected booked accounts	must have
BRD 3.2.2. 3			c. Process Endorsements (negative financial and non-financial)	Result: User should be able to process negative financial and non-financial endorsements) Negative Scenario: User cannot process negative financial and non-financial endorsements)	must have
		C. As a Business Administrator, I want to be able to...			
BRD 3.3.1. 1		I. Log in as a Business Administrator	a. Access the module/application using any BDO issued device	Result: User should be able to access the module/application using any BDO issued device Negative Scenario: User cannot access the module/application using any BDO issued device	must have
BRD 3.3.1. 1.1			1. Log in with a Business Administrator user profile	Result: User should be able to log in with a Business Administrator user profile Negative Scenario: User cannot log in with a Business Administrator user profile	must have

BRD 3.3.1. 1.2			2. Receive the inactivity warning after 15 minutes	Result: User should be able to receive the inactivity warning after 15 minutes Negative Scenario: User cannot receive the inactivity warning after 15 minutes	must have
BRD 3.3.1. 1.3			3. Receive warning 30 minutes prior to system triggered log out	Result: User should be able to Receive warning 30 minutes prior to system triggered log out Negative Scenario: User cannot Receive warning 30 minutes prior to system triggered log out	must have
BRD 3.3.2. 1		II. Open the Application in multiple tabs	a. Open the application in multiple tabs	Result: User should be able to open the application in multiple tabs Negative Scenario: User cannot open the application in multiple tabs	must have
BRD 3.3.3. 1		III. Maintain List of Values (LOVs)	a. View defined LOVs	Result: User should be able to view defined LOVs Negative Scenario: User cannot view defined LOVs	must have
BRD 3.3.3. 2			b. Add new LOVs	Result: User should be able to add new LOVs Negative Scenario: User cannot add new LOVs	must have
BRD 3.3.3. 3			c. Edit defined LOVs	Result: User should be able to edit defined LOVs Negative Scenario: User cannot edit defined LOVs	must have
BRD 3.3.3. 4			d. Deactivate defined LOVs	Result: User should be able to delete defined LOVs Negative Scenario: User cannot delete defined LOVs	must have
BRD 3.3.3. 5			e. Select an effectivity date on the changes in LOVs	Result: User should be able to select an effectivity date on the changes in LOVs Negative Scenario: User cannot select an effectivity date on the changes in LOVs	must have

BRD 3.3.4. 1		IV. Maintain users	a. Assign user profile/role to a specific user/s (based on agreed User Access Matrix)	Result: User should be able to assign user profile/role to a specific user/s (based on agreed User Access Matrix) Negative Scenario: User cannot assign user profile/role to a specific user/s (based on agreed User Access Matrix)	must have
BRD 3.3.5. 1		V. Submit profile creation/modification requests	a. Create new/modification profile requests	Result: User should be able to create new/modification profile requests Negative Scenario: User cannot create new/modification profile requests	must have
BRD 3.3.5. 2			b. Submit profile creation/modification requests for approval	Result: User should be able to submit profile creation/modification requests for approval Negative Scenario: User cannot submit profile creation/modification requests for approval	must have
BRD 3.3.6. 1		VI. Access Reports	a. View, download and save audit log report as needed	Result: User should be able to view, download and save audit log report as needed Negative Scenario: User cannot to view, download and save audit log report as needed	must have
		D. As a System Administrator, I want to be able to... (Capabilities listed below are those currently known to have Business Unit impact. This list may be subject for updates as additional impacts are identified)			
BRD 3.4.1. 1		I. Access the Application	a. Access the application using any BDO Work station	Result: User should be able to access the application using any BDO Work station Negative Scenario: User cannot access the application using any BDO Work station	must have
BRD 3.4.1. 1.1			1. Log in with a System Administrator User profile	Result: User should be able to log in with a System Administrator User profile Negative Scenario: User cannot log in with a System Administrator User profile	must have

BRD 3.4.2. 1		II. Manage Users of the System	a. Define User profile/role	Result: User should be able to define User profile/role Negative Scenario: User cannot define User profile/role	must have
BRD 3.4.2. 1.1			1. Create profile for Marketing User	Result: User should be able to create profile for Marketing User Negative Scenario: User cannot create profile for Marketing User	must have
BRD 3.4.2. 1.2			2. Create profile for Processing User	Result: User should be able to create profile for Processing User Negative Scenario: User cannot create profile for Processing User	must have
BRD 3.4.2. 1.3			3. Create profile for Approver	Result: User should be able to create profile for Approver Negative Scenario: User cannot create profile for Approver	must have
BRD 3.4.2. 1.4			4. Create profile for Business Administrator	Result: User should be able to create profile for Business Administrator Negative Scenario: User cannot create profile for Business Administrator	must have
BRD 3.4.2. 1.5			5. Create profile for Adjustment User	Result: User should be able to create profile for Adjustment User Negative Scenario: User cannot create profile for Adjustment User	must have
BRD 3.4.2. 2			b. Assign specific functionality/capability to a user profile/role	Result: User should be able to assign specific functionality/capability to a user profile/role Negative Scenario: User cannot assign specific functionality/capability to a user profile/role	must have

BRD 3.4.2. 2.1			1. Assign receive quotation/proposal request function to a specific user profile/role	Result: User should be able to assign receive quotation/proposal request function to a specific user profile/role Negative Scenario: User cannot assign receive quotation/proposal request function to a specific user profile/role	must have
BRD 3.4.2. 2.2			2. Assign create quotation/proposal function to a specific user profile/role	Result: User should be able to assign create quotation/proposal function to a specific user profile/role Negative Scenario: User cannot assign create quotation/proposal function to a specific user profile/role	must have
BRD 3.4.2. 2.3			3. Assign search client function to a specific user profile/role	Result: User should be able to assign search client function to a specific user profile/role Negative Scenario: User cannot assign search client function to a specific user profile/role	must have
BRD 3.4.2. 2.4			4. Assign update client details function to a specific user profile/role	Result: User should be able to assign update client details function to a specific user profile/role Negative Scenario: User cannot assign update client details function to a specific user profile/role	must have
BRD 3.4.2. 2.5			5. Assign search account/s function to a specific user profile/role	Result: User should be able to assign search account/s function to a specific user profile/role Negative Scenario: User cannot assign search account/s function to a specific user profile/role	must have
BRD 3.4.2. 2.6			6. Assign update account/s function to a specific user profile/role	Result: User should be able to assign update account/s function to a specific user profile/role Negative Scenario: User cannot assign update account/s function to a specific user profile/role	must have

BRD 3.4.2. 2.7			7. Assign upload files/documents function to a specific user profile/role	Result: User should be able to assign upload files/documents function to a specific user profile/role Negative Scenario: User cannot assign upload files/documents function to a specific user profile/role	must have
BRD 3.4.2. 2.8			8. Assign view uploaded documents function to a specific user profile/role	Result: User should be able to assign view uploaded documents function to a specific user profile/role Negative Scenario: User cannot assign view uploaded documents function to a specific user profile/role	must have
BRD 3.4.2. 2.9			9. Assign access reports function to a specific user profile/role	Result: User should be able to assign access reports function to a specific user profile/role Negative Scenario: User cannot assign access reports function to a specific user profile/role	must have
BRD 3.3.2. 2.10			10. Assign request for an override function to a specific user profile/role	Result: User should be able to assign request for an override function to a specific user profile/role Negative Scenario: User cannot assign request for an override function to a specific user profile/role	must have
BRD 3.4.2. 2.11			11. Assign handle returned placement request function to a specific user profile/role	Result: User should be able to assign handle returned placement request function to a specific user profile/role Negative Scenario: User cannot assign handle returned placement request function to a specific user profile/role	must have

BRD 3.4.2. 2.12			12. Assign access generated insurance advice function to a specific user profile/role	Result: User should be able to assign access generated insurance advice function to a specific user profile/role Negative Scenario: User cannot assign access generated insurance advice function to a specific user profile/role	must have
BRD 3.4.2. 2.13			13. Assign approve requests function to a specific user profile/role	Result: User should be able to assign approve override requests function to a specific user profile/role Negative Scenario: User cannot assign approve override requests function to a specific user profile/role	must have
BRD 3.4.2. 2.14			14. Assign an assign workload to specific user/s function to a specific user profile/role	Result: User should be able to assign an assign workload to specific user/s function to a specific user profile/role Negative Scenario: User cannot assign an assign workload to specific user/s function to a specific user profile/role	must have
BRD 3.4.2. 2.15			15. Assign create bulk quotation/proposal function to a specific user profile/role	Result: User should be able to assign create bulk quotation/proposal function to a specific user profile/role Negative Scenario: User cannot assign create bulk quotation/proposal function to a specific user profile/role	must have
BRD 3.4.2. 2.16			16. Assign generate account/s for bulk processing function to a specific user profile/role	Result: User should be able to assign generate account/s for bulk processing function to a specific user profile/role Negative Scenario: User cannot assign generate account/s for bulk processing function to a specific user profile/role	must have
BRD 3.4.2. 2.17			17. Assign create client/s function to a specific user profile/role	Result: User should be able to assign create client/s function to a specific user profile/role Negative Scenario: User cannot assign create client/s function to a specific user profile/role	must have

BRD 3.4.2. 2.18			18. Assign create account/s function to a specific user profile/role	Result: User should be able to assign create account/s function to a specific user profile/role Negative Scenario: User cannot assign create account/s function to a specific user profile/role	must have
BRD 3.4.2. 2.19			19. Assign generate billing report (currently applicable for CBG fire) function to a specific user profile/role	Result: User should be able to assign generate billing report (currently applicable for CBG fire) function to a specific user profile/role Negative Scenario: User cannot assign generate billing report (currently applicable for CBG fire) function to a specific user profile/role	must have
BRD 3.4.2. 2.20			20. Assign validate payment (other market segment) function to a specific user profile/role	Result: User should be able to assign validate payment (other market segment) function to a specific user profile/role Negative Scenario: User cannot assign validate payment (other market segment) function to a specific user profile/role	must have
BRD 3.4.2. 2.21			21. Assign generate placement file/slip function to a specific user profile/role	Result: User should be able to assign generate placement file function to a specific user profile/role Negative Scenario: User cannot assign generate placement file function to a specific user profile/role	must have
BRD 3.4.2. 2.22			22. Assign generate insurance advice function to a specific user profile/role	Result: User should be able to assign generate insurance advice function to a specific user profile/role Negative Scenario: User cannot assign generate insurance advice function to a specific user profile/role	must have
BRD 3.4.2. 2.23			23. Assign send placement file/slip function to a specific user profile/role	Result: User should be able to assign send placement file/slip function to a specific user profile/role Negative Scenario: User cannot assign send placement file/slip	must have

				function to a specific user profile/role	
BRD 3.4.2. 2.24			24. Assign request for hold cover (HC) function to a specific user profile/role	Result: User should be able to assign request for hold cover (HC) function to a specific user profile/role Negative Scenario: User cannot assign request for hold cover (HC) function to a specific user profile/role	must have
BRD 3.4.2. 2.25			25. Assign receive e-policy function to a specific user profile/role	Result: User should be able to assign receive e-policy function to a specific user profile/role Negative Scenario: User cannot assign receive e-policy function to a specific user profile/role	must have
BRD 3.4.2. 2.26			26. Assign update e-policy number in the system function to a specific user profile/role	Result: User should be able to assign update e-policy number in the system function to a specific user profile/role Negative Scenario: User cannot assign update e-policy number in the system function to a specific user profile/role	must have
BRD 3.3.2. 2.27			27. Assign generate reports function to a specific user profile/role	Result: User should be able to assign generate reports function to a specific user profile/role Negative Scenario: User cannot assign generate reports function to a specific user profile/role	must have
BRD 3.4.2. 2.28			28. Assign send e-policy to client function to a specific user profile/role	Result: User should be able to assign send e-policy to client function to a specific user profile/role Negative Scenario: User cannot assign send e-policy to client function to a specific user profile/role	must have

BRD 3.4.2. 2.29			29. Assign generate list of account/s for individual processing function to a specific user profile/role	Result: User should be able to assign generate list of account/s for individual processing function to a specific user profile/role Negative Scenario: User cannot assign generate list of account/s for individual processing function to a specific user profile/role	must have
BRD 3.4.2. 2.30			30. Assign confirm issuance or payment function to a specific user profile/role	Result: User should be able to assign confirm payment function to a specific user profile/role Negative Scenario: User cannot assign confirm payment function to a specific user profile/role	must have
BRD 3.4.2. 2.31			31. Assign book account/s function to a specific user profile/role	Result: User should be able to assign book account/s function to a specific user profile/role Negative Scenario: User cannot assign book account/s function to a specific user profile/role	must have
BRD 3.4.2. 2.32			32. Assign cancel placement function to a specific user profile/role	Result: User should be able to assign cancel placement function to a specific user profile/role Negative Scenario: User cannot assign cancel placement function to a specific user profile/role	must have
BRD 3.4.2. 2.33			33. Assign manually build accounts for bulk processing function to a specific user profile/role	Result: User should be able to assign manually build accounts for bulk processing function to a specific user profile/role Negative Scenario: User cannot assign manually build accounts for bulk processing function to a specific user profile/role	must have

BRD 3.4.2. 2.34			34. Assign access generated insurance advice function to a specific user profile/role	Result: User should be able to assign access generated insurance advice function to a specific user profile/role Negative Scenario: User cannot assign access generated insurance advice function to a specific user profile/role	must have
BRD 3.4.2. 2.35			35. Assign reactivate cancelled placed accounts function to a specific user profile/role	Result: User should be able to assign reactivate cancelled placed accounts function to a specific user profile/role Negative Scenario: User cannot assign reactivate cancelled placed accounts function to a specific user profile/role	must have
BRD 3.4.2. 2.36			36. Assign cancelled booking function to a specific user profile/role	Result: User should be able to assign cancelled booking function to a specific user profile/role Negative Scenario: User cannot assign cancelled booking function to a specific user profile/role	must have
BRD 3.4.2. 2.37			36. Assign maintain List of Values (LOVs) function to a specific user profile/role	Result: User should be able to assign maintain List of Values (LOVs) function to a specific user profile/role Negative Scenario: User cannot assign maintain List of Values (LOVs) function to a specific user profile/role	must have
BRD 3.4.2. 2.38			36. Assign maintain users function to a specific user profile/role	Result: User should be able to assign maintain users function to a specific user profile/role Negative Scenario: User cannot assign maintain users function to a specific user profile/role	must have

BRD 3.4.2. 2.39			36. Assign submit profile creation/modification requests function to a specific user profile/role	Result: User should be able to assign submit profile creation/modification requests function to a specific user profile/role Negative Scenario: User cannot assign submit profile creation/modification requests function to a specific user profile/role	must have
BRD 3.4.3. 1		III. Generate Reports	a. Generate audit log report	Result: User should be able to assign cancel placement function to a specific user profile/role Negative Scenario: User cannot assign cancel placement function to a specific user profile/role	must have
BRD 3.4.3. 1			b. Export audit log reports as needed	Result: User should be able to export audit log reports as needed Negative Scenario: User cannot export audit log reports as needed	must have

Usage Requirements

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent			
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	User Login	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	Quotation Search	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL,	Quotation Creation and Updating	392	118	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	Client Search	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL,	Client Creation and Updating - Individual	392	118	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL,	Batch Client Creation	392	118	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL,	Account Search	485	145	21,200/month	20%	10 secs

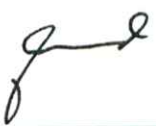

Processor, Processing TL						
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	Account Creation and Updating- Individual	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	Batch Account Creation	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL, Processor, Processing TL	Uploading of Files/Documents	485	145	21,200/month	20%	10 secs
Marketing Account Officer/Broker, Marketing TL	Generation of Insurance Advice	392	118	21,200/month	20%	10 secs

Processor, Processing TL	Endorsement Processing	82	25	1,300/month	20%	10 secs
System Admin	System User Access Administration	3	3	3/ month		10 secs
Questions			Response			
When is the highest system demand expected (e.g., year-end)?			Follow existing QPS set up			
When are peak times for usage (e.g., 12:00 - 14:00 daily)?			8am to 10am; 3pm to 5pm			

Do mobile and desktop end users expect different levels of speed and performance?			No			
Availability						
Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.						
Questions			Response			
What is the acceptable system availability (e.g., 99.9%)?			Follow existing QPS set up			
When do people use the system (e.g., 9am-6pm daily, 24/7)?			7am to 10pm, Monday to Saturday			
How long can the system be down each month or year without causing issues?			Follow existing QPS set up			
What times are acceptable for system maintenance?			Follow existing QPS set up			
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?			Follow existing QPS set up			
Data Retention & Archiving						
Refer to how long data is stored, how it is managed overtime, and when it is moved to long-term storage or deleted, based on the business needs and legal/compliance requirements.						
Data	Retention Period (Data-In-Use / Online)	Archival Period (Data-at-Rest / Offline)	Backup Frequency	Accessibility	Backup Retention Period	
Follow existing QPS set up	Follow existing QPS set up	Follow existing QPS set up	Follow existing QPS set up	Follow existing QPS set up	Follow existing QPS set up	
Questions			Response			
Should certain data be anonymized over a particular period?			Follow existing QPS set up			

Approval

This document has been approved as the official Business Requirements Document for the New Business Fire and Motor.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Subject: [For Sign off]: BRD New Business Fire and Motor

Dear Sir Mj,

Requesting for your sign-off on the attached New Business Fire and Motor BRD.

APPENDIX A
Computation Guide

ALL LINES	
CALCULATED FIELDS	FORMULA
Prorata	Fields containing premium breakdown multiplied by number of days covered divided by 365 or 366
Short Term Period Rate (Cancellation earlier than the termination period)	Premium rate multiplied by the applicable percentage based on the month/days covered
Minimum Premium	Apply minimum premium if the TSI does not meet a particular requirement. Minimum premium varies per package (refer to product matrix). This is not applicable for any endorsement or prorata transaction.

FIRE	
CALCULATED FIELDS	MULTI-YEAR FORMULA
LGT (Local Government Tax)	Value is dependent on the Insurer Branch
NETPREMIUM	TSI (Total Sum Insured) x Premium Rate
DST (Documentary Stamp Tax)	12.5% of the Net Premium
	Note:
	* If the decimal value of the computation is from 0.01 to 0.49 round up to 0.50
	*If the decimal value of the computation is from 0.51 to 0.99 rounder up to 1.00
PTX (Premium Tax)	12% of the Net Premium
FST (Fire Service Tax)	2% of the Net Premium
TOTALCHARGES	Sum of DST, PTX, FST, LGT, OTH
GROSSPREMIUM	Sum of Net Premium, DST, PTX, FST, LGT
COMMISSION	Commission Rate x Net Premium Rate
VATONCOMMISSION	12% of the Commission

MOTOR		
CALCULATED FIELDS	MULTI-YEAR FORMULA	ANNUAL COVER FORMULA
NEW OD(Own Damage)/THEFT COVERAGE	81% of TSI (Total Sum Insured)	90% of TSI
BI (Bodily Injury) COVER	Value of Excess BI (Bodily Injury) Limit	Value of Excess Bi Limit
PD (Property Damage) COVER	Value of Excess PD(Property Damage) Limit	Value of Excess PD Limit
OD(Own Damage)//PV(Political Violence) RATE	Premium Rate divided by 100	Premium Rate divided by 100
LGT RATE	Value is dependent on the Insurer Branch	Value is dependent on the Insurer Branch
OD(Own Damage)// THEFT PREMIUM	New OD/Theft Coverage x OD/PV Rate	New OD/Theft Coverage x OD/PV Rate
BI(Bodily Injury) PREMIUM	Value of Excess Premium Amount	Value of Excess Premium Amount
PD(Property Damage) PREMIUM	Value of Excess PD Premium	Value of Excess PD Premium
BASIC PREM	Sum of PD Premium, BI Premium and OD/ Theft Premium	Sum of PD Premium, BI Premium and OD/ Theft Premium
DST(Documentary Stamp Tax)	12.5% of the Net Premium	12.5% of the Net Premium
	Note:	Note:
	* If the decimal value of the computation is from 0.01 to 0.49 round up to 0.50	* If the decimal value of the computation is from 0.01 to 0.49 round up to 0.50
	*If the decimal value of the computation is from 0.51 to 0.99 rounder up to 1.00	*If the decimal value of the computation is from 0.51 to 0.99 rounder up to 1.00
VAT (Value Added Tax)	12% of basic Premium	12% of basic Premium
LGT (Local Government Tax)	Basic Premium x LG Rate	Basic Premium x LG Rate
TOTAL CHARGES	Sum of DST, VAT and LGT	Sum of DST, VAT and LGT
TOTAL PREMIUM	Sum of Basic Premium and Total Charges	Sum of Basic Premium and Total Charges
