Business Needs and Requirements

I. Executive Summary (What do you need?)

BDO Insure is undertaking the BDOI Core Modernization program to replace fragmented legacy platforms with a unified core system. The current data landscape across legacy systems (e.g., QPS and EBIX) is siloed, inconsistent, and operationally patched over time, increasing migration risk.

This BRD defines the business requirements for a selective, continuity-focused data migration and transition approach: migrate clean, high-value master and reference data for Day-1 readiness, carry forward only open operational financial positions (e.g., UPP/outstanding receivables/remittance positions) required to continue operations, and retain historical transactions via controlled read-only legacy and/or archival access.

II. Business Objective (Why do you need it?)

Enable a stable Core go-live by ensuring Day-1 operational continuity for marketing, operations, and accounting while establishing a clean and trusted data foundation for future automation and reporting.

a. Business Goals

Indicate the goal of the requested change. If the objective is not listed, choose “Others” and specify.

- ☒ **Revenue**
- ☒ **Cost Savings** *operational efficiency*
- ☒ **Compliance/Regulatory Requirement**
- ☒ **Customer Experience** *improved servicing reliability*
- ☒ **Tech Obsolescence**
- ☒ **Others:** *Risk Reduction and Data Quality Improvement (clean start)*

Texts highlighted in blue are provided as samples only. Please remove them when drafting the actual BRD.

III. What is the current process? (Before)

Current State (Before):

- Client and operational data are maintained across multiple legacy systems, resulting in duplication, inconsistent identifiers, and fragmented ownership.
- Operational finance processes (payment application, UPP monitoring/disposition, remittance, reversals, and endorsements) rely on legacy invoice structures and manual controls.
- Users often depend on manual verification to validate correctness of data and postings.

IV. What is the envisioned journey? (After)

Target State (After):

- The new Core operates with a trusted Client Master and governed reference data mappings (LOV, insurer/product/package/risk codes, MIS).
- Open operational positions needed for continuity (e.g., UPP and outstanding receivables/remittances) are carried forward and actionable in the new Core.
- Legacy systems are retained in controlled read-only mode for historical inquiry and audit during run-off, while renewals progressively recreate clean policy/account records in the new Core.

V. Table of Business Requirements

State business outcomes / capabilities (e.g. Customer Data Capture, Statement Regeneration, Real time Notification, Marketing and Analytics, Operational and Financial Reporting) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1.#)

Business Key Capabilities:

1. Migration Governance & Decision Gates
2. Client Master Data Migration
3. Reference Data Mapping & Migration (LOV, insurer/product/package/risk code, MIS)
4. In-force Policy Header (conditional) / Renewal-Driven Transition
5. Open Items Carry-Forward (UPP, outstanding receivables, remittance positions)
6. Payments Continuity (OTC/Autopay/UPP automatch)
7. Accounting Adjustments (DPPR/PR2307 reversals)
8. Remittance Extract & Posting Continuity
9. Legacy Invoice Adjustments / Endorsements (subject to coexistence decision)
10. Prod Recon Visibility & Delta Reporting
11. Legacy Read-Only / Archival Access for History
12. Cutover & Coexistence (RMEL/Run-Off/Decommissioning)

Business Requirements					
Process / Capability #	BR ID	Persona	Requirement / User story	Expected Result / Acceptance Criteria	Priority Level
1	BRID 1.1	As a Data Migration Lead	I want to apply migration decision gates per data object so that only Day-1 critical and compliant data is migrated and project risk is minimized.	Given a proposed data object, When business owners assign migration requirement Day-1 need, compliance need, read-only/archival option, data trust, Then it data objects been actioned upon ie. as Migrate / Carry-Forward (Open Items) / Archive / Excluded.	Must have
1	BRID 1.1	As a Data Migration Lead	I want to reconcile all migrated data per data object.	Given cutover is completed, When I check the generated data migration reports, Then all data objects and items are reconcilable from source to target.	Must have
2	BRID 2.1	As a Marketing User	I want Client Master Data available in the new Core so that I can service clients, renew policies, and create future transactions without re-encoding identities.	Given cutover is completed, When I search for a client, Then the client master is found and usable in downstream transactions with deduped identity per agreed keys.	Must have
3	BRID 3.1	As a Data Steward	I want governed mapping and migration of reference tables (LOV, insurer/product/package /risk codes, MIS) so that transactions and reporting use correct codes and classifications.	Given an approved mapping list, When reference data is loaded, Then all required codes exist, unmapped/invalid codes are reported, and mapping versions are controlled and signed off.	Must have

4	BRID 4.1	As an Operations User	I want minimal in-force policy header information available in the new Core so that I can locate active coverage for servicing when operationally required.	Given an in-force policy is in scope for header migration, When I search the policy, Then key header details (status, key dates, insurer, line of business) are available and linked to the correct client.	Must have
5	BRID 5.1	As a Cashiering User	I want to record all legacy Unapplied Premium Payments (UPP) in the new Core so that unapplied cash is not lost after cutover.	Given a migrated UPP item, When I view it, Then amount/reference/status are visible and the system can issue acknowledgment receipt, generate accounting entry, and update UPP sub-ledger.	Must have
5	BRID 5.2	As a Cashiering User	I want to auto-apply legacy UPP via automatch rerun to booked invoices (legacy and new) so that payments are efficiently applied and sub-ledgers are updated correctly.	Given a booked invoice and available UPP, When automatch rerun runs, Then UPP is applied to invoice(s), accounting entries are generated, and UPP/Premium Receivable sub-ledgers are updated for legacy and/or new contexts as applicable.	Must have
5	BRID 5.3	As a Cashiering User	I want to disposition legacy UPP by applying it to another invoice so that cash can be allocated based on client instruction.	Given a UPP item and eligible target invoice, When I apply it to another invoice, Then the payment is applied, accounting entries generated, and UPP/Premium Receivable sub-ledgers updated.	Must have
5	BRID 5.4	As a Cashiering User	I want to refund legacy UPP so that excess or misapplied payments can be returned to clients.	Given an approved refund request, When refund is processed, Then the system records the refund, generates	Must have

				accounting entries, and updates the UPP sub-ledger.	
5	BRID 5.5	As a Finance Approver	I want to reclassify legacy UPP to other income (with top management approval) so that exceptional cash dispositions are properly accounted for.	Given top management approval is recorded, When reclassification batch is executed, Then the system posts reclass entry, generates accounting entries, and updates UPP sub-ledger.	Must have
6	BRID 6.1	As a Cashiering User	I want to process OTC payments and apply them to booked legacy invoices so that collections against legacy invoices can continue after cutover.	Given an OTC payment and booked legacy invoice reference, When I post the payment, Then it applies to the invoice, issues acknowledgment receipt, generates accounting entry, flows to Cash Receipts Books, and updates Premium Receivable sub-ledger (legacy).	Must have
6	BRID 6.2	As a Cashiering User	I want to match and apply autopay premium payments to legacy invoices so that automated collections continue without manual intervention.	Given an autopay payment record and legacy invoice, When matching runs, Then payment is applied, acknowledgment receipt issued, accounting entry generated, Cash Receipts Books updated, and Premium Receivable sub-ledger (legacy) updated.	Must have
6	BRID 6.3	As a Cashiering User	I want to auto-apply UPP that contains combinations of payments for new and legacy invoices so that mixed payments are allocated correctly across invoice types.	Given a mixed UPP item, When automatch rerun runs, Then payment portions are applied to new and/or legacy invoices, accounting entries generated, and UPP/Premium Receivable sub-ledgers updated for both contexts.	Must have

6	BRID 6.4	As a Cashiering User	I want to apply UPP to another legacy invoice so that unapplied cash can be resolved against the correct legacy receivable.	Given a UPP item and legacy invoice, When I apply UPP, Then accounting entry is generated and UPP/Premium Receivable sub-ledgers (legacy) are updated.	Must have
7	BRID 7.1	As an Accounting User	I want to reverse DPPR legacy invoices in batch so that corrections can be applied consistently and efficiently.	Given a list of DPPR legacy invoices approved for reversal, When batch reversal runs, Then accounting entries are generated and Premium Receivable, Commission Receivable, and DTIP sub-ledgers (legacy) are updated.	Must have
7	BRID 7.2	As an Accounting User	I want to reverse PR2307 legacy invoices in batch so that withholding-related corrections can be applied accurately.	Given a list of PR2307 legacy invoices approved for reversal, When batch reversal runs, Then accounting entries are generated and Premium Receivable, Commission Receivable, and DTIP sub-ledgers (legacy) are updated.	Must have
8	BRID 8.1	As a Remittance User	I want remittance extracts to include all applied premiums for both legacy and new invoices so that insurer remittances are complete and accurate.	Given applied premium payments from autopay/UPP rerun/OTC, When I generate remittance extract, Then it includes applied premiums for both invoice types, produces schedule and official receipts, generates accounting entries, updates DTIP/Commission Receivable sub-ledgers (legacy and new), and flows to Cash Disbursements Books.	Must have

9	BRID 9.1	As an Operations User	I want to process positive endorsements against legacy invoices so that premium increases are reflected with appropriate invoices and postings.	Given a legacy invoice endorsement request, When I process positive endorsement, Then changes are computed as applicable, service invoice and accounting entries generated, legacy invoice sub-ledger updated, and audit trail retained linked to endorsement numbers.	Must have
9	BRID 9.2	As an Operations User	I want to process negative endorsements against legacy invoices so that premium decreases are reflected correctly and renewal is based on net endorsements.	Given a legacy invoice endorsement request, When I process negative endorsement, Then changes are computed as applicable, service invoice and accounting entries generated, sub-ledger updated, audit trail retained, and renewal basis reflects net endorsements.	Must have
9	BRID 9.3	As an Operations User	I want to process non-financial endorsements against legacy invoices with approval workflow so that policy data changes are controlled without financial postings.	Given a non-financial endorsement request, When approvals are completed and change is applied, Then the updated data is stored and renewal is based on updated values.	Must have
10	BRID 10.1	As a Prod Recon Analyst	I want any changes made to legacy invoices to be visible and extractable so that reconciliation and audit review can be performed efficiently.	Given a legacy invoice update, When I run the Prod Recon report, Then it shows original values, updated values, and the delta and is exportable.	Must have
11	BRID 11.1	As an Audit/Compliance User	I want historical transactions and documents retained in	Given a historical record request, When I search via approved inquiry mechanism, Then the	Must have

			read-only legacy or archive so that audit and regulatory inquiries can be satisfied without migrating full history into the new Core.	record is retrievable and access is logged.	
12	BRID 12.1	As a Program Manager	I want the cutover approach aligned to renewal expiry month (RMEL) so that in-force policies run off and renew into the new Core in a controlled manner.	Given a cutover plan, When go-live occurs, Then confirmed/booked/bound policies follow the agreed transition model and renewal processing in the new Core is enabled with clear run-off and legacy decommissioning criteria.	Must have

Usage Requirements

Complete the tables where applicable. If a table is not relevant to your request, indicate “Not Applicable”.

Note: For any data extract requirements, please collaborate with your IT partner for assistance.

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (%)	Expected Response Time
		Max	Concurrent			
<i>Type of User</i> “Who is using the system?”	<i>User Activity</i> What the user does in the system to accomplish a business task	<i>Number of Users</i> How many people will use the system?		<i>This refers to how many actions or transactions people are expected to do in the system and how quickly the system should respond when they do them</i>	<i>How much the system’s stored data will increase each year</i>	<i>How quickly the system reacts when a user clicks or requests something</i>
Not Applicable						
Refer to the consolidated NFR requirements for BDO Insure Core Modernization project						
Questions			Response			
When is the highest system demand expected (e.g., year-end)?			Not Applicable Refer to the consolidated NFR requirements for BDO Insure Core Modernization project			
When are peak times for usage (e.g., 12:00 - 14:00 daily)?						
Do mobile and desktop end users expect different levels of speed and performance?						

Availability	
Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	Not Applicable Refer to the consolidated NFR requirements for BDO Insure Core Modernization project
When do people use the system (e.g., 9am-6pm daily, 24/7)?	
How long can the system be down each month or year without causing issues?	
What times are acceptable for system maintenance?	
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	

Data Retention & Archiving					
Refer to how long data is stored, how it is managed overtime, and when it is moved to long-term storage or deleted, based on the business needs and legal/compliance requirements.					
Data	Retention Period (Data-In-Use / Online)	Archival Period (Data-at-Rest / Offline)	Backup Frequency	Accessibility	Backup Retention Period
Not Applicable Refer to the consolidated NFR requirements for BDO Insure Core Modernization project					
Questions	Response				
Should certain data be anonymized over a particular period?	Not Applicable Refer to the consolidated NFR requirements for BDO Insure Core Modernization project				

Note: Refer to relevant bank policies for data retention and archiving.

Approval

This document has been approved as the official Business Requirements Document for the BDOI Core Modernization Data Migration request.
