1. Introduction

1.1 Purpose and Scope of the Document

This document defines the business requirements for **Reinsurance**.

The Business Requirements Document (BRD) lists the capabilities expected from the solution / service to meet the outcomes of the Business Request (BRQ) approved in the business case. The BRD should be more descriptive than the original BRQ but should not detail how each capability will be built or which system it will be built in unless the detail is critical to the explicitly stated outcome.

This document shall be updated as requirements are further defined and finalized based on discussions, recommendations and feedback from business and technical stakeholders. Unless otherwise stated, all requirements are considered high priority and committed for this phase.

1.2 Intended Audience

INVOLVEMENT	NAME	GROUP
Author	Zean C. Ibay Wynonah Allyssa D. Agojo	OP BPDS IT AIO
Input Provider	Alvin B. Pila Allan I. Villas Iris S. Marquez Huessain Pangcoga	BDOI
Output Receiver	BDOI ReInsurance	BDOI
Process Owner	Shellah Marie C. Miranda	BDOI

1.3 Definition of Terms

List down all terms, not limited to Acronyms, used in the document to help the readers understand the content.

Term	Category	Definition
LOA		Letter Of Authorities Mode of payment under Motor Claims wherein Insurer has a nominated organization to perform the fix / repair.
PLA		Preliminary Loss Advice
RCRF		Reinsurance Claims Reporting Form

1.4 References

Include here the Business Request (BRQ) and Business Case, or any other related documents,used in preparing this BRD.

DOCUMENT ID	TITLE	AUTHOR

2. Overview

The Reinsurance is designed to automate and streamline the reinsurance process for BDOI RI. The system will enable users to initiate placement requests, create and send placement slips, receive and review placement slips, and manage claims proceeds.

2.1 Business Objectives

1. Automate the reinsurance placement process.
2. Streamline the claims management process to ensure timely payment of claims proceeds.
3. Improve communication and collaboration between BDOI RI, Cedant, and Reinsurers.
4. Enhance reporting and audit trail capabilities to ensure transparency and accountability.
5. Enhance claims proceeds management and tracking.

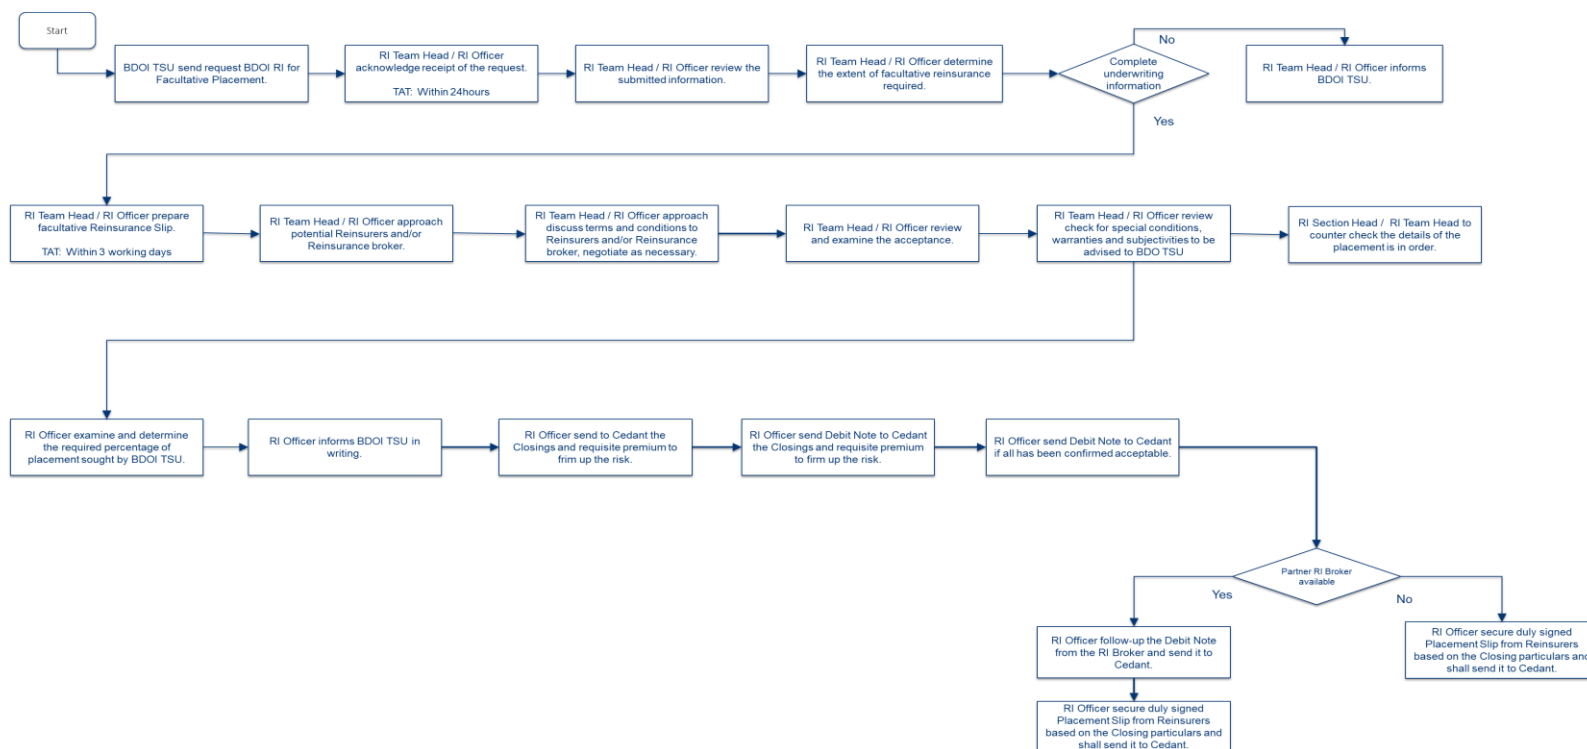

2.2 Assumptions and Limitations

1. The system will only be accessible to authorized users with the necessary permissions.
2. The system will not be able to automate all manual processes, and some manual intervention may still be required.

4. Stakeholders

Group	Unit/Department	User Role	Functions
BDOI		BDOI RI	1. Receives and processes the placement request 2. View placement slip details. 3. Edit and revise the placement slips.
		BDOI TSU	1. Initiates a new placement request 2. Creates and saves the placement request. 3. View placement slip details. 4. Edit and revise the placement slips.
		Comptrollership	1. View placement slip details.
		System	1. Automatically sends the placement request to BDOI RI 2. Flows in placement slip information from BDOI TSU to BDOI RI. 3. Logs revisions made to the placement slips. 4. Sends the revised placement slip to Cedant/BDOI TSU. 5. Notifies Cedant/BDOI TSU of the revised placement slip. 6. Sends the placement slip to Reinsurers. 7. Generates accounting entries. 8. Generates and sends SOA to designated recipients. 9. Creates remittance schedule. 10. Generates PCRF. 11. Generates and sends FLA to Reinsurance Market. 12. Generates and sends invoices to participating Reinsurers. 13. Receives and captures notifications on paid claims proceeds. 14. Automatically creates accounting entry for inflow of cash. 15. Generates reports related to placement process. 16. Tracks user actions and status changes. 17. Logs communication.

5. Business Requirements (FUNCTIONAL)

FR ID	Activity	Capability/ Requirement	RD ID	Additional Remarks	Phase / Release	Mandatory?	High Risk?
FRID-001	Request Initiation	The system must have a capability to allow BDOI TSU to initiate a request for placement.	RQID-001				
FRID-002	Request Initiation	The system must have a capability to allow BDOI TSU to create a placement request.	RQID-002				
FRID-003	Request Initiation	The system must have a capability to allow BDOI TSU to save the placement request and continue for	RQID-002				
FRID-004	Information Flow	The system should have a capability to flow-in Placement Slip Information from BDOI TSU going to BDOI RI.	RQID-002 RQID-004				
FRID-005	Request Initiation	The system should have a functionality to automatically send the placement request to BDOI RI once it is completed. BDOI TSU creates word file then attach / upload to the system. TSU to trigger a "button" or auto-sending to BDOI RI.	RQID-002				
FRID-006	Request Initiation	The system should have the capability to receive placement requests from BDOI TSU.	RQID-003				
FRID-007	Request Initiation	The system should be able to validate and process the received placement requests.	RQID-003				
FRID-008	Request Initiation	There should be a functionality in the system to add Reinsurers or RI Brokers as contacts. There could be multiple Reinsurers or RI Brokers with different risk percentages.	RQID-005				
FRID-009	Request Initiation	The system must have a capability to allow Users to associate the Reinsurer or RI Broker with the placement request to enable auto-sending of the request.	RQID-005				
FRID-010	Request Initiation	The system should have a mechanism to automatically send the placement request to the designated Reinsurer or RI Broker.	RQID-005				
FRID-011	RI Broking Placement and Booking	The system should have a feature to receive and capture the reasons for non-acceptance of placement slips.	RQID-006				
FRID-012	RI Broking Placement and Booking	The system should provide a notification or alert BDOI TSU when a placement slip is not accepted and the reasons are received.	RQID-006				
FRID-013	RI Broking Placement and Booking	The system should have a functionality to automatically inform BDOI TSU when a placement slip is not accepted and the reason is acceptable.	RQID-007				
FRID-014	Audit Trails	The system should provide a record or log of the communication for audit and tracking purposes.	RQID-007 RQID-008 RQID-009 RQID-012 RQID-018 RQID-021				
FRID-015	RI Broking Placement and Booking	The system should have a feature to allow users to submit additional information, requirements, or justification in coordination with Cedant or BDOI TSU.	RQID-008				
FRID-016	RI Broking Placement and Booking	The system should have a functionality to automatically inform BDOI TSU when a placement request has been totally declined.	RQID-009				
FRID-017	RI Broking Placement and Booking	The system should provide a user interface or dashboard where users can access and review the placement slips submitted by Cedant or BDOI TSU.	RQID-010				
FRID-018	RI Broking Placement and Booking	There should be a search or filter functionality to easily locate and retrieve specific placement slips.	RQID-010				
FRID-019	RI Broking Placement and Booking	The system must have a capability to allow Users to view the details and contents of the placement slip for review and verification.	RQID-010				
FRID-020	RI Broking Placement and Booking	The system should have an editing or revision feature to allow users to make changes to the placement slip.	RQID-011				
FRID-021	RI Broking Placement and Booking	The system must have a capability to allow Users to access the placement slip and modify the necessary fields or sections.	RQID-011				

FRID-022	RI Broking Placement and Booking	The system should provide a record or log of the revisions made for audit and tracking purposes.	RQID-011				
FRID-023	RI Broking Placement and Booking	The system should have a functionality to send the revised placement slip back to Cedant or BDOI TSU for sign-off.	RQID-012				
FRID-024	RI Broking Placement and Booking	The system should have a functionality for notification or messaging to inform Cedant or BDOI TSU about the revised placement slip.	RQID-012				
FRID-025	RI Broking Placement and Booking	The system should have a functionality to send the completely signed-off Placement Slip to the designated Reinsurers for their sign-off.	RQID-013				
FRID-026	RI Broking Placement and Booking	There should be a notification or messaging feature in the system to inform the Reinsurers about the signed-off Placement Slip.	RQID-013				
FRID-027	RI Broking Placement and Booking	The system should provide a record or log of the communication and sign-off process for audit and tracking purposes.	RQID-013				
FRID-028	RI Broking Placement and Booking	The system should have a functionality to automatically send the completely signed-off Placement Slip to the Operations.	RQID-014				
FRID-029	Audit Trails	The system should provide a record or log of the communication and handover process for audit and tracking purposes.					
FRID-030	RI Broking Placement and Booking	The system should have an account booking feature or integration with the accounting system to facilitate the booking process.	RQID-015				
FRID-031	RI Broking Placement and Booking	There should be a mechanism to automatically generate the necessary accounting entries based on the accepted Placement Slip.	RQID-015				
FRID-032	RI Broking Placement and Booking	The system should provide a record or log of the account booking for audit and tracking purposes.	RQID-015				
FRID-033	RI Broking Placement and Booking	The system should have a functionality to generate a Statement of Account (SOA) based on the booked account.	RQID-016				
FRID-034	RI Broking Placement and Booking	There should be a template or format for the SOA that can be customized or configured.	RQID-016				
FRID-035		The system should provide options to specify the recipient or recipients of the generated SOA.	RQID-016 RQID-019				
FRID-036	RI Broking Placement and Booking	The system should have an automated email or messaging feature to send the generated Statement of Account (SOA) to the designated recipients.	RQID-016				
FRID-037	RI Broking Placement and Booking	The system should have functionality to schedule and trigger the automatic sending of the SOA. Generation of SOA includes details of the risk acceptance.	RQID-017				
FRID-038	RI Broking Placement and Booking	The system should provide a record or log of the sent SOA for audit and tracking purposes.	RQID-017				
FRID-039	RI Premium Collection and Remittance	The system should have an integration or notification mechanism to automatically inform BDOI Comptrollership about the premium payment or remittance to Cedant. BDOI RI to provide list of those recipient of the remittance processed by Comptrollership.	RQID-018				
FRID-040	RI Premium Collection and Remittance	The system should have a functionality to generate a Statement of Account (SOA) specifically for reinsurance premiums.	RQID-019				
FRID-041	RI Premium Collection and Remittance	There should be a template or format for the SOA that is tailored for reinsurance premiums.	RQID-019				

FRID-042	RI Premium Collection and Remittance	The system should have an account reconciliation or payment application feature to apply the received premium payments to the appropriate accounts. Scenario 1: From Cedant to RI Broker -- BDO RI monitoring only no debit note - Debit - RI commission from RI Broking Partner - Credit: Commission form Insureds Scenario 2: Cedant > BDO RI > Reinsurer - Debit - receivables from ceding company - Credit - payable to reinsurer - another entry (this is simultaneous from the earlier entry) - record commission for reinsurance transaction - Debit - commission receivable from reinsurer	RQID-020				
FRID-043	RI Premium Collection and Remittance	There should be a mechanism to match the received payments with the corresponding accounts or invoices.	RQID-020				
FRID-044	RI Premium Collection and Remittance	The system should provide a record or log of the payment application for audit and tracking purposes.	RQID-020				
FRID-045	RI Premium Collection and Remittance	The system should have a functionality to notify BDOI RI Officer about the remittance of premiums to Reinsurer / Reinsurance Broker Partner.	RQID-021				
FRID-046	RI Premium Collection and Remittance	The system should have a functionality to generate a proof of remittance document that can be provided to both Reinsurers and BDOI RI.	RQID-022				
FRID-047	RI Premium Collection and Remittance	There should be a template or format for the proof of remittance that can be customized or configured.	RQID-022				
FRID-048	RI Premium Collection and Remittance	The system should provide options to specify the recipient or recipients of the generated proof of remittance. A pop-up up window to add the email address of the recipient/s.	RQID-022				
FRID-049	RI Premium Collection and Remittance	The system should have a functionality to generate reminders or notifications for the due dates of installments or premium payments.	RQID-023				
FRID-050	RI Premium Collection and Remittance	There should be a mechanism to schedule and trigger the generation of reminders or notifications.	RQID-023				
FRID-051	RI Premium Collection and Remittance	The system should provide options to specify the recipient or recipients of the generated reminders or notifications.	RQID-023				
FRID-052	RI Premium Collection and Remittance	The system should have an automated email or messaging feature to send the generated reminder or notification to the designated Marketing AO on the due dates in relation to the installments / premium payments.	RQID-024				
FRID-053	RI Premium Collection and Remittance	There should be a mechanism to schedule and trigger the automatic sending of the reminder or notification.	RQID-024				
FRID-054	RI Premium Collection and Remittance	The system should provide a record or log of the sent reminders or notifications for audit and tracking purposes.	RQID-024				
FRID-055	RI Premium Collection and Remittance	The system should have a functionality to create a remittance schedule that includes the details of the remittance transactions.	RQID-025				
FRID-056	RI Premium Collection and Remittance	There should be a template or format for the remittance schedule that can be customized or configured.	RQID-025				
FRID-057	RI Premium Collection and Remittance	The system should provide options to specify the recipient or recipients of the generated remittance schedule.	RQID-025				
FRID-058	RI Claims Payment	The system should have a functionality to send a cash call to the designated Reinsurers to request timely funding for outstanding claims.	RQID-027				
FRID-059	RI Claims Payment	There should be a notification or messaging feature in the system to inform the Reinsurers about the cash call.	RQID-027				
FRID-060	RI Claims Payment	The system should provide a record or log of the communication and cash call process for audit and tracking purposes.	RQID-027				

FRID-061	RI Claims Payment	The system should have a functionality to generate a debit note specifically for sending to the all the Reinsurers (RI).	RQID-028				
FRID-062	RI Claims Payment	There should be a template or format for the debit note that can be customized or configured.	RQID-028				
FRID-063	RI Claims Payment	The system should provide options to specify the recipient or recipients of the generated debit note.	RQID-029				
FRID-064	RI Claims Payment	The system should have a feature to receive and capture notifications or updates on paid claims proceeds from the Reinsurer.	RQID-029				
FRID-065	RI Claims Payment	The system should provide a record or log of the received notifications for audit and tracking	RQID-029				
FRID-066	RI Claims Payment	The system should have an accounting integration or functionality to automatically create the necessary accounting entry for the inflow of cash from the received claims proceeds. (Inward remittance). Claims to notify Accounting via email on setting-up the receivable. This is for advance reference of Cashiering only. Debit note will be the basis of BDOI RI when remitting RI premium to Reinsurers. Debit - Account receivable Reinsurers. Credit – Payable to Ceding Companies Scenario 1: No accounting entry will be needed since BDO RI is not involved Scenario 2: - debit - AR reinsurer - credit - payable to cedant - Receipt for cash call for reinsurers - debit - Cash - Credit - AR reinsurers - debit - payable to ceding companies - credit - cash due to local banks (Reinsurance)	RQID-030				
FRID-067	RI Claims Payment	The system should provide a record or log of the accounting entry for audit and tracking purposes.	RQID-030				
FRID-068	RI Claims Payment	The system should have a functionality to send a follow-up payment request or reminder to the Reinsurers if the claims proceeds are not yet paid.	RQID-031				
FRID-069	RI Claims Payment	There should be a notification or messaging feature in the system to inform the Reinsurers about the follow-up payment.	RQID-031				
FRID-070	RI Claims Payment	The system should have a functionality to generate structured requests for payment to the	RQID-032				
FRID-071	RI Claims Payment	There should be predefined templates or formats for the requests that can be customized or					
FRID-072	RI Claims Payment	The system should provide options to specify the recipient or recipients of the generated requests.					
FRID-073	RI Claims Payment	The system should have a feature to receive and capture the request for payment from BDOI RI	RQID-033				
FRID-074	RI Claims Payment	The system should provide a record or log of the received request for payment for audit and tracking purposes.	RQID-033				
FRID-075	RI Claims Payment - Directly to Client	There should be a mechanism to generate the cheques based on the payment details and recipient information.	RQID-035				
FRID-076	RI Claims Payment - Directly to Client	The system should provide a record or log of the issued cheques for audit and tracking purposes.	RQID-035				
FRID-077	RI Claims Payment - Directly to Client	The system should have a functionality to track the status of issued cheques, including whether they have been cashed or cleared.	RQID-035				
FRID-078	RI Claims Payment - Directly to Client	There should be a dashboard or report that displays the status of the issued cheques.	RQID-035				
FRID-079	RI Claims Payment - Directly to Client	The system should provide options to search or filter the issued cheques based on different criteria.	RQID-035				
FRID-080	RI Claims Payment - Directly to Client	The system should have a functionality to track and confirm the delivery of cheques to clients.	RQID-035				

FRID-081	RI Claims Payment - Directly to Client	There should be a mechanism to capture the confirmation of receipt from the clients.	RQID-035				
FRID-082	RI Claims Payment - Directly to Client	The system should provide a record or log of the delivery confirmation for audit and tracking purposes.	RQID-035				
FRID-083	Claims Proceeds Management	The system should have a functionality to confirm the receipt of claims proceeds with the Client.	RQID-036 RQID-038				
FRID-084	Claims Proceeds Management	There should be a mechanism to capture the confirmation of receipt from the Client.	RQID-036 RQID-038 RQID-041				
FRID-085	Audit Trails	The system should provide a record or log of the confirmation for audit and tracking purposes.	RQID-036 RQID-038 RQID-039 RQID-041				
FRID-086	RI Claims Payment - Remitted to Cedant	The system should have an integration or functionality to automatically remit the claims proceeds to Cedant's bank account.	RQID-038				
FRID-087	RI Claims Payment - Remitted to Cedant	There should be predefined rules or mappings to determine the remittance details and recipient bank account.	RQID-038				
FRID-088	RI Claims Payment - Remitted to Cedant	The system should provide a record or log of the remittance for audit and tracking purposes.	RQID-038				
FRID-089	RI Claims Payment - Remitted to Cedant	The system should have a functionality to automatically inform BDOI RI and BDOI TSU about the remittance of claims proceeds to Cedant's bank account.	RQID-039				
FRID-090	RI Claims Payment - Remitted to Cedant	There should be a notification or messaging feature in the system to send the information to BDOI RI and BDOI TSU.	RQID-039				
FRID-091	RI Claims Payment - Remitted to Cedant	The system should have a feature to receive and capture reminders for follow-up on payments not received by Clients.	RQID-040				
FRID-092	RI Claims Payment - Remitted to Cedant	The system should provide a record or log of the received reminders for audit and tracking purposes.	RQID-041				
FRID-093	RI Claims Payment - Remitted to Cedant	The system should have a functionality to confirm the receipt of claims proceeds with Cedant and BDOIRI.	RQID-042				
FRID-094	RI Claims Payment - Remitted to Cedant	There should be a mechanism to capture the confirmation of receipt from Cedant and BDOIRI.	RQID-043				
FRID-095	Report Generation	The system should have a functionality to generate various reports related to the placement process, premium payments, claims proceeds, and other relevant data.	RQID-044				
FRID-096	Report Generation	There should be predefined report templates or formats that can be customized or configured.	RQID-044				
FRID-097	Report Generation	The system should provide options to specify the parameters and filters for the generated reports.	RQID-044				
FRID-098	Audit Trails	The system should have a logging or audit trail feature to record and track user actions, status changes, and turnaround times.	RQID-044				
FRID-099	Audit Trails	There should be a mechanism to capture and store the relevant information in a secure and accessible manner.	RQID-044				
FRID-100	Audit Trails	The system should provide options to search or filter the audit trails based on different criteria.	RQID-044				
FRID-101	Claims Reporting and Settlement	The system must have a capability to allow Claims Handler to input the net recommended amount of loss reserve into the BDOI account of each Reinsurer or RI Broker.					
FRID-102	Claims Reporting and Settlement	The system must allow the Claims Handler to share reports with all Reinsurers within the specified timeframe. All Reinsurers have valid contact information stored in the system.					
FRID-103	Claims Reporting and Settlement	The system must generate a Reinsurance Claims Reporting Form (RCRF) upon receipt of the Loss Adjuster's report. The system has a template for the RCRF.					
FRID-104	Claims Reporting and Settlement	The system must provide a format for the Formal Loss Advice (FLA) and facilitate its sending to the Reinsurance Market. The FLA format complies with industry standards					
FRID-105	Claims Reporting and Settlement	The system can generate and send the Preliminary Loss Advice to all Reinsurers.					
FRID-106	RI Premium Collection and Remittance	The system should have a Net Settlement capability.					

6. Business Requirements (NON-FUNCTIONAL)

1) List all the non-functional requirements needed by the project including but not limited to security, system performance and res

2) The following Non-Functional Requirements are samples. Please replace them and add to them as applicable to your project.

NFR ID	Requirement	Additional Remarks
1	User Authentication Requirements	
1.01	As a user, I should be able to open the application using my windows credentials in the application login page so that I could use only one credentials for all the application I am using.	System should be able to use SSO. - password should be encrypted and is not visible in inspect tool - only users granted access to the system and has a setup user profile could access the system Logon credentials: - user id -- employee id - password -- windows password
1.02	As a user, I should be able to see my password masked unless I select to unmask it as it is being entered to the system to prevent exposure of the password	
1.03	As a user, I should be able to see my log on error messages to be user friendly and not code based error messages so that I would understand the error prompts.	Error Prompt: - Invalid User Name or Password - User does not exist
1.04	The system should be able to log all valid and invalid attempts to access the application. Only the System Administrator should be able to see the logs for user access attempts.	User ID Maintenance: - Should able to log all valid and even invalid attempts. - Users should be locked out to the system after 3 invalid attempts.
2	Password Requirements	System should use SSO and follow existing BDO compliance password requirements
2.01	Password is validated without exposing the clear text value of the stored password (e.g. hash / masking)	
2.02	The system should lock out or disable access of user after three (3) invalid password attempts	
2.03	The system should support mandatory password change at least once every 90 days as per LDAP compliance.	
2.04	Minimum password length is eight characters (8). For system accounts with administrator privileges, minimum password length is twelve (12) characters.	
2.05	Composition of complex passwords is supported by requiring creation of passwords consisting of: - Combination of alphabetic, numeric, and special characters - Combination of upper case and lower case alphabetic characters	
2.06	Re-use or recycling of previous/last eight (8) passwords is prevented	

2.07	The application supports a minimum password age of one (1) day to prevent users from cycling through previous passwords until the next day.	
2.08	Password reset facilities (e.g. forgot password links) should verify the identity of the user initiating the request through out-of-band validation	
2.09	Input data in the UserID and Password fields should be evaluated for the following factors: a) Length of data is ten (10) characters b) Only accept permitted characters	
2.10	The system should be capable of adapting to changes in specific values or password parameters (e.g. 90 for expiration, 3 for lockout, 8 for password length, etc) in response to changes in the level of security threats	
3	Access Control Requirements	
3.01	The system should be able to provide maintenance function for user administration, which supports user creation, update, deletion and account locking/unlocking.	
3.02	The system should support role based access control.	
3.03	The system should be able to support creation of custom roles o support granular level of access	
3.04	The system should protect against URL parameter manipulation that can bypass authorization by preventing exposure of direct object references	
4	Audit Logging Requirements	
4.01	The system audit logs record successful and rejected system access attempts (i.e. login, logout), privileged system usage, as well as account changes such as creation, deletion, and assignment of user roles.	
4.02	The system audit logs record successful admin maintenance actions (e.g. userID creation/deletion, elevated access of userID).	
4.03	The system audit logs record the following admin and user activities: Application Maintenance and Backend Activities - Application startup and shutdown. - Application failures. - Application configuration changes. - Accessing of audit logs - Pausing, clearing, or deleting audit logs, as applicable Application Usage, such as, - Access and updates of customer records, whether customer-initiated, or done through back office facilities. - Financial transactions initiated within the application, as applicable. - Device enrollment or unenrollment, as applicable.	At the minimum, audit logs should log the following information: - Event timestamp. - User account/s involved in the event. - Source (workstation, device, or IP address) of the event. For systems situated behind a load balancer or anti-DdoS solutions, the original source IP should be logged. - Resources accessed, if any (e.g. URL, file path, etc.).
4.04	Application software logs such as Tomcat or IIS does not log sensitive information such as credentials, and session tokens, and other data defined under local privacy laws or relevant security policies.	
4.05	Audit logs should be exportable, or made available for sending to remote log monitoring systems as needed.	
5	Input Data Checking and Validation Requirements	
5.01	Input data is validated and sanitized (e.g. within length boundaries, contains permitted characters, correct syntax, etc) to protect against code injection attacks which include, but not limited to - sql injection, cross-site scripting, buffer, heap, or integer overflow, and denial-of service.	
6	Database Authentication Requirements	

6.01	The database management system has standard security features that include, but not limited to, authentication, access control and audit logging.	
6.02	Access to the database is only allowed after proper authentication.	
6.03	Credentials are not hard-coded within the application binaries or programs, but are set in a server configuration file or repository that can be made accessible only to authorized users, or encrypted when stored in client machines.	
6.04	Least privilege access level or only the needed privilege is granted when accessing the database.	
6.05	Low level database functions such as xp_cmdshell and extproc, that enable access to execute commands in the operating system, are not used by the system	
7	Application Encryption Requirements	
7.01	The system should make use of available security protocols (e.g. HTTPS, SFTP/FTPS, SSH etc.) to protect sensitive data during transmission over networks.	
8	Application Configuration and Library Dependency Requirements	
8.01	The system should ensure proper error handling preventing disclosure of sensitive information such as stack traces, failed SQL statements, underlying web server platform and othe debugging information.	
8.02	Source code control system is in use, with procedures to ensure that check-ins are accompanied by issues or change tickets. The source code control system should have access control and identifiable users to allow traceability of any changes. Proper versioning for any system changes should be implemented.	
8.03	The system should NOT use unsupported, insecure, or deprecated client-side technologies, container images, and/or libraries.	
8.04	Third party components come from pre-defined, trusted and continually maintained repositories.	
8.05	Inventory catalog is maintained of all third party libraries in use. Version and support information is also maintained to track when a library becomes outdated	
8.06	Least privilege access level or only the needed privilege is granted when accessing the database.	
9	User Interface and Experience Requirements	
9.01	The system user interface must follow existing BDO Insurance UI to have a uniform experience for all BDOI applications.	
9.02	For internal systems, concurrent open sessions should be allowed and will follow session management requirements.	
9.03	User should be able to copy/paste from their local computer to the Application in all fields that are applicable	
9.04	Proper error handling is implemented preventing disclosure of sensitive information.	
10	Session Management Requirements	
10.01	The system should support an idle or inactivity timeout for session. Session timeout is set to 15 minutes for active session opened.	A screen should be available in the System Administration page to set the session time outs. By default, timeouts are set by BDO standard for non customer facing applications.
10.02	Session IDs are random and unpredictable to avoid attacks.	
10.03	Session ID changes/renews each time a user authenticates to the application, and is invalidated on the server side upon logout.	

10.04	The system uses session cookies, the 'HttpOnly' and 'SecureFlag' attributes are enabled using set-cookie directive	
10.05	A user session is established only after valid credentials are provided. Insecure implementation of programs (e.g. Java Servlets), which potentially allow access to the application without a successful login, are disallowed.	
10.06	Only session IDs generated by the application framework are recognized as active by the application	
11	Integration Requirements - Webservice /APIs	
11.01	Web service/API authenticates the calling application/system through OAuth2.0 or similar methods. Internal APIs handling financial transactions must implement Oauth at the minimum.	
11.02	Public-facing web services/API implements mTLS or an equivalent mutual authentication method	
11.03	Web service/API authorizes whether a calling application has access to a requested method.	
11.04	Sensitive information required for further processing by other application logic (e.g. client phone number to send OTPs) should be handled exclusively by back-end components, and must not pass through or stored in the client's browser or the calling application	
11.05	Information contained in the response should be limited only to what is necessary for the web service's/API's purpose.	
11.06	Web service/API audit logs are able to capture the following events: - Failed access attempts - Denied access	
12	Batch Process Requirements	
12.01	Access to execute batch process is restricted to authorized users.	
12.02	Target locations for extracted data have strict access controls.	
12.03	Batch process authenticates to the database server before it is allowed access to data.	
12.04	Batch process connects to a database management system with standard security features, but not limited to, authentication, access control and audit logging.	
12.05	Credentials used by the batch process are not hard-coded within the application binaries or programs, but are set in a configuration file that can be made accessible only to authorized users.	
12.06	Least privilege access needed by the application is assigned to the credential used to access the database.	
12.07	Batch process makes use of available strong cryptography and/or security protocols such as TLS, SSH and IPSEC to safeguard sensitive data during transmission over private and public network.	
12.08	Audit logs record elements that can pinpoint origin of the batch process, when it was executed and who triggered it.	
13	Scalability Requirements	

13.01	The system should perform in normal response time even if maximum load is encountered	- No downtime during application scaling should be encountered for the system - For Database Scaling : maximum of 120 minutes downtime and would only be done manually
14	Regulatory Requirements	IC reportorial requirements for reinsurance BU - waiting for input from Accounting for the sample report figures needed from the system (e.g. Annual premium receivables)
15	Should fulfill Capacity and Performance Requirements (see Tables below) (refers to the requirements that impact the performance relative the amount of resources and maximum limits of the system)	
16	Should fulfill Data Retention and Archiving Requirements (see Tables below)	
17	Should fulfill Availability Requirements (refers to requirements that impact a system's accessibility)	
17.01	Defined operating hours (Defined operating hours refers to the day and time during which a business or organization is open for users to do business. On the context of this project, please specify the day and time the users are expected to use this module (e.g. Monday - Friday, 8:00AM to 5:00PM))	Mondays - Fridays 6:00 AM - 8:00 PM
17.02	Defined locations (Defined locations refers to the site where business transactions can be performed. On the context of this project, please specify to which locations can a user access this module (e.g. Main office, satellite offices, branch, at home or anywhere via remote access, anywhere via Internet, etc.)	Head Office - Makati and Ortigas
17.03	Defined maintenance window (Defined maintenance windows refers to the period of date and time designated in advance by the technical staff, during which preventive maintenance that could cause disruption of service may be performed.)	Follow standard window time
18	Should fulfill Reliability and Recoverability Requirements (refers to the requirements that impact a system's ability to deliver critical business services and to recover from sudden errors or downtimes)	

18.01	<i>RTO (recovery time objective)</i> Refers to the maximum tolerable length of time that a computer, system, network, or application can be down or should be operational after a system failure or disaster occurs (e.g. within 2 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.02	<i>RPO (recovery point objective)</i> Refers to the maximum acceptable amount of data loss measured in time. It is the age of the files or data in backup storage required to resume to normal operations of a computer system or network failure occurs. In other words, this refers to a point in the past from which data should be recovered to make a system operational after a system failure (e.g., data within the last 4 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.03	Disaster Recovery Server Required (Y/N)	YES
18.04	Recovery Processes documentation	YES

15a. Performance and Capacity Requirements

Consider if Performance & Capacity Requirements are applicable to your project. Values on the table are sample requirements you can use.

NFR ID	Business Process / Transaction Type	User Channel / Touchpoint	Group	User Count		Current Transaction Volume	Projected Growth	Expected Response / Processing Time (Turn-Around Time)	Acceptable Error Rate	Interface d Systems	Average File Size per System (Bulk/per file)	Maximum File Size per System (Bulk/per file)	Frequency
				Max	Concurrent
