

PRODUCT MAINTENANCE – ADDENDUM (Workshop)
Business Requirements Document (BRD)
Prepared by: Business Project Services (BPS)

Strictly Confidential and for Internal Use of BDO only

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/10/2026	1.0	Addendum to capture the additional Product Maintenance requirements identified during the Business Requirement Gap Discovery Workshop last March 23-27, 2026	Jane Mariz S. Tagle
4/10/2026	1.1	Added BRID PMADD07 and PMADD07 based on acceptance discussion with BU	Jane Mariz S. Tagle

Addendum¹: Business Requirements for New Business

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 23 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of New Business Requirements

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement>					
PMADD01		User	I want a standard reusable product structure hierarchy so that product data is consistent and scalable across packaged and non-packaged products.	Expected Result: A single, documented product hierarchy exists and is applied consistently to all package configurations (and referenced for non-package items if/when added). Acceptance Criteria: 1. The BRD explicitly defines the hierarchy levels (LOB, Subline/Type/Subtype, Coverage/Peril). 2. The system enforces capture of those hierarchy fields for package maintenance records (cannot save incomplete hierarchy). 3. Naming/classification rules are stated as requirements (not left implicit).	Must Have
PMADD02		User	I want insurer-specific coverage, deductibles, and warranty mappings maintained without IT intervention so that insurer variability is supported in a controlled manner.	Expected Result: TSU can manage insurer-specific coverage mapping as controlled configuration, and configuration remains audit-traceable. Acceptance Criteria: 1. Authorized users can maintain insurer-specific values. 2. Mapping rules exist between insurer/product/coverage components. 3. Changes are logged.	Must Have
PMADD03		User	I want configurable comparative tables so that client-specific outputs can be generated without manual Excel rework while retaining an auditable master version.	Expected Result: Comparative tables can produce both (1) an audit master which is based on the Quotation Slip and (2) a client-tailored view. Acceptance Criteria: 1. Users can include/exclude fields and insurers per output. 2. System retains an audit "master" version. 3. Output generation is traceable.	Must Have

² User could be but not limited to Marketing AO, TSU, Processing. User roles and authorization will be further defined in succeeding documentations.

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
PMADD04		User	I want to have explicit exception states and iterative negotiation loop support so that non-linear insurer negotiations, revisions, and declines are handled as formal workflow outcomes rather than informal handling.	Expected Result: Negotiation outcomes and iteration cycles are explicitly captured as requirement-level workflow states. Acceptance Criteria: 1. Exception states exist (Approved w/ Changes, Declined, etc.). 2. Revision loops are supported and logged. 3. Validation checkpoints identify responsible roles.	Must Have
PMADD05		User	I want a role-to-action access matrix so that access is controlled appropriately and audit risk is reduced.	Expected Result: A role-to-action access matrix is established and maintained, clearly defining which system roles are permitted to perform specific actions within the system. This ensures users can only perform actions aligned with their assigned roles. Acceptance Criteria: 1. Matrix defined are create/amend/approve/view-only. 2. Changes are auditable and traceable. 3. Admin can maintain roles/permissions.	Must Have
PMADD06		User	I want an explicit post-setup validation checkpoint (e.g., by TSU Head / Business Administrator role) so that incorrect package/product configurations do not propagate downstream without accountability.	Expected Result: A defined validation step exists before releasing configurations for operational use. Acceptance Criteria: 1. Explicitly defines a post-setup validation step and the responsible role(s). 2. Configuration cannot be treated as “ready” unless validation is completed (requirement statement). 3. Validation completion is recorded in an audit trail.	Must Have
PMADD07		User	I want to define and maintain Incentive criteria based on the Maintained Products Matrix, so that incentives are accurately configured and applied only to eligible product combinations.	Expected Result: 1. The Incentive Maintenance user successfully creates and manages incentive criteria using valid entries from the Maintained Products Matrix. 2. The system enforces all validation rules, preventing invalid or inconsistent incentive configurations.	Must Have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				3. Incentives are accurately stored, activated, and applied based on configured criteria and effective dates. 4. Historical incentive data remains intact for reporting, auditing, and compliance purposes. 5. All maintenance activities are traceable through system audit logs. Acceptance Criteria: 1. The system allows authorized Incentive Maintenance users to create, update, activate, and deactivate incentive criteria. 2. Incentive criteria can only be defined using valid and active entries from the Maintained Products Matrix. 3. Required incentive attributes (type, value/rules, applicable products, effective dates) must be provided. 4. The system validates all inputs and prevents saving invalid or incomplete configurations. 5. Effective start and end dates must be logically valid. 6. Changes to active incentive criteria are controlled according to system rules. 7. Incentive lifecycle actions retain historical records. 8. All incentive maintenance activities are audit-logged for traceability.	
PMADD08		System	I must have a maintenance facility to define and update Incentives (i.e. CPC2) criteria based on the maintained products.	Expected Result: 1. The system successfully allows incentive criteria to be created, updated, activated, and deactivated using only valid entries from the Maintained Products Matrix. 2. Incentive criteria are correctly validated against the matrix, preventing invalid or inconsistent configurations. 3. Only active maintained product combinations can be used when defining incentive rules. 4. Incentive criteria are stored accurately with effective dates and applied as configured. 5. All changes to incentive criteria are traceable through audit logs, and historical data is preserved.	Must Have

BR ID	Source BRD ID	Persona ²	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Acceptance Criteria: 1. The system allows definition and maintenance of incentive criteria (i.e. CPC2, etc.). 2. Incentive criteria can only be configured using entries from the maintained products matrix. 3. Each incentive criterion includes required attributes as applicable (i.e. products, rules/conditions, effective dates, etc.) 4. The system validates incentive criteria against the maintained products matrix to prevent invalid configurations. 5. Incentive criteria can be activated, updated, or deactivated while preserving historical records. 6. Changes to active incentive criteria follow controlled system rules. 7. All maintenance actions are audit-logged for traceability and compliance.	

Approval

This document has been approved as the official Business Requirements Document for the New Business Fire and Motor.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

PRODUCT MAINTENANCE (PACKAGE)
Business Requirements Document (BRD)

Prepared by:
Enterprise Services Group - Business Project Services

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
October 08, 2025	1.0	Initial Version	Zean C. Ibay
October 17,2025	1.0	Package and Non-Package discussion	Zean C. Ibay
October 27, 2025	1.0	Exclude Non-Package and include this as part of an addendum	Zean C. Ibay
November 03, 2025	1.0	Finalize BRD discussion for Package Maintenance	Zean C. Ibay
November 16, 2025	1.0	Request for approval	Zean C. Ibay
November 24, 2025	1.0	Addressed comments / clarifications	Zean C. Ibay

Business Needs and Requirements

I. Executive Summary (What do you need?)

A user-friendly maintenance module is required for authorized administrators (MBS/Admin, TSU) to directly manage and update Package Products without IT intervention.

- Direct management and update capability for Package Products.
- Automatic audit tracking for compliance.
- Synchronization of updates across all relevant systems.
- Streamlined approval, validation, and reporting processes.

Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement *(attach the related law being addressed)*
- ☐ Customer Experience
- ☒ Others:

1. Streamline and centralize administrative tasks for managing and updating Products.
2. Reduce dependency on IT, minimize manual work, ensure synchronization and improve data accuracy.
3. Support audit and compliance requirements with robust tracking and reporting.
4. Enable quick decision-making with accurate, real-time reports.

b. Benefits

1. Automated workflows mean less manual work and approvals move more quickly.
2. The system checks data and steps automatically, reducing mistakes that can happen with manual entry or email-based processes.
3. Only authorized users can access sensitive documents, and files can be password-protected or encrypted.
4. The system keeps a record of all actions and approvals, making it easier to meet audit and regulatory requirements.

II. What is the current process? (Before)

1. Marketing initiates placement requests via email using a TSU request form.
2. TSU prepares and sends quotation slips to insurers.
3. Insurers respond with signed quotation slips or approved terms via email.

-
4. Quotations are compiled into comparative tables (Excel), shared via email. Comparative tables are compiled for both single and multiple insurer approaches, as applicable to the account.
 5. Manual sign-off and advisory sending.
 6. No password protection or encryption for shared documents.
 7. Manual monitoring of package expiry dates, often using spreadsheets or calendar reminders.
 8. All changes, approvals, and supporting documents are tracked manually—often in email threads or physical files.

III. What is the envisioned process? (After)

1. Marketing logs requests directly into the system (automated logging).
2. System generates reference numbers and tracks requests.
3. Proposal and quotation workflows are systematized, reducing email dependency.
4. Comparative tables and reports are generated and shared via a secure dashboard.
5. Dashboard provides real-time tracking, reporting, and user-specific access.
6. Documents are shared securely (password protection/encryption).
7. Validation and approval steps are enforced within the system.
8. System monitoring of expiring packages and upcoming renewals.
9. Automated renewal workflow is triggered for packages approaching expiry.
10. Renewal records and history are archived and accessible for audit and future reference.

IV. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRPM (ex: Key capability 1 should match with all BRPM1.#)

Business Key Capabilities:

1. Automated request handling.
2. Automatic reference numbers.
3. Easier quotation and proposal management.
4. Automatic comparison tables.
5. Real-time dashboard and reports.
6. Built-in checks and approvals.
7. Secure document sharing.
8. Works with existing systems.
9. Tracks all changes.
10. Expiring packages monitoring.
11. Renewal workflow automation.
12. Renewal negotiation and documentation.
13. Renewal reporting and analytics.

Business Requirements**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement> :					
BRPM.001		MBS TSU Marketing	Access and log-in to the system.	Expected Result: 1. Credential entered correctly. Acceptance Criteria: 1. Able to access the system. Negative Scenario: 1. System denies access.	Must have.
BRPM.002		System	Restrict access to authorized users.	Expected Result: 1. Secure access control. Acceptance Criteria: 1. Only authorized users can log in. 2. Users must enter valid credentials. 3. The system should deny access if the credentials are incorrect. Negative Scenario: 1. Users cannot log in to the system. 2. Unauthorized users attempt to access the system.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRPM.003		System	There must be a capability to capture , store, and validate all mandatory, critical and product-specific fields.	Expected Result: 1. All required fields are captured and stored in the system. Acceptance Criteria: 1. System accepts and stores all product-specific fields without error. Negative Scenario: 1. Missing or incorrect field capture leads to incomplete records.	
BRPM.004		System	There must be a capability to apply validation rules based on product type.	Expected Result: 1. System enforces correct validation rules per product type. 2. Validation rules trigger appropriately based on input data for each product line. Acceptance Criteria: 1. Validation rules trigger appropriately based on input data. Negative Scenario: 1. Rules are not applied correctly, allowing invalid data entry.	Must have.
BRPM.005		System	There must be a capability to use shared templates with dynamic fields for product-specific data.	Expected Result: 1. The system utilizes shared document templates that can dynamically adjust to include fields specific to each insurance product line (e.g., CGL, Equipment Floater, Marine Cargo, Fire, Motor, etc.). 2. Documents are generated with accurate product-specific information. Acceptance Criteria: 1. Templates are populated correctly with relevant data for each product line. Negative Scenario:	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Templates fail to populate fields, resulting in incomplete documents.	
BRPM.006		System	There must be a capability to store and archive details of expired insurance products (policies/packages) for future reference or potential reactivation.	Expected Result: - Expired products (policies/packages) are retained in the system, accessible for future reference or potential reactivation, with all associated data (details, rates, communications) intact. Acceptance Criteria: - Upon expiry, product records are not deleted but archived and remain searchable. - Authorized users can retrieve expired product details, including all historical documentation. - Expired products are clearly tagged as “expired” in the system. - Access to expired product data is restricted to authorized personnel. Negative Scenario: - A user attempts to retrieve an expired product, but the system has deleted or failed to archive the record, resulting in data loss or inability to reference past terms.	Must have.
BRPM.007		System	The system ensures that all new business (new insurance placements) must automatically use the latest approved rate scheme. Outdated rates cannot be selected for new business.	Expected Result: - All new business transactions automatically use the latest approved rate scheme. - The system prevents selection of outdated rates for new business. - Old packages are locked for new business but remain accessible for renewals as needed. - Any attempt to use a non-current rate triggers an approval workflow and is logged. Acceptance Criteria: - The system enforces the latest approved rate scheme for all new business entries. - Users cannot select outdated rates for new business transactions. - Attempts to use non-current rates trigger an approval workflow.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. The system logs the rate scheme version used for each transaction. 5. Old packages are locked for new business but can be referenced for renewals until updated. Negative Scenario: 1. A user is able to create a new business entry using an outdated rate scheme, bypassing system controls and resulting in non-compliance.	
BRPM.008		Marketing AO / TSU	Submit approved Package Request Form.	Expected Result: 1. System allows Users to submit the Package Request Form with all required client information, requested terms, and conditions. 2. The system validates that all mandatory fields are completed and correct before allowing submission. 3. The Package Request Form is reviewed and approved by the Marketing Team Lead (TL), Team Head (TH), or Marketing Unit Head (UH). 4. TSU TL receives a complete and approved Package Request Form from Marketing AO. Acceptance Criteria: 1. The system allows Marketing AO/TSU to input and submit all client information and requested terms and conditions for each package. 2. Mandatory fields are clearly indicated and must be completed before submission. 3. The system validates data (correct formats, ranges, required fields) and prevents saving if errors are detected. 4. The Package Request Form is reviewed and approved by the relevant authority (TL, TH, or UH) before proceeding. 5. The system prevents submission of incomplete or incorrect forms. Negative Scenario:	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Users are able to submit incomplete or incorrect Package Request Forms. - The system does not validate entries, allowing errors to pass through. - The Package Request Form is not reviewed or approved by the relevant authority, causing delays or compliance issues. - The Package Request Form is lost or not forwarded to TSU TL, causing missed or delayed processing.	
BRPM.009		TSU TL	Review package requests and recommends for approval.	Expected Result: - TSU Team Lead (TL) reviews the submitted package request for completeness, accuracy, and compliance. - TSU TL provides a recommendation for approval, including any necessary feedback or required changes. - TSU Team Head (TH) reviews the recommendation and provides formal approval within the system. - The approved package request is ready for the next step in the workflow (e.g., preparation of quotation slip, negotiation with insurers). Acceptance Criteria: - The system allows TSU TL to review and recommend package requests for approval. - TSU TL's recommendation is clearly documented and visible to TSU TH. - TSU TH can review the recommendation and provide approval. - The system prevents the package request from proceeding to the next step unless TSU TH approval is completed. - All review, recommendation, and approval actions are logged with timestamps and user details. Negative Scenario: - TSU TL fails to review or recommend the package request.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. TSU TH does not provide approval, or approval is missing/unclear, preventing the package from moving forward. 4. The system allows the package request to proceed without TSU TH approval, resulting in compliance issues.	
BRPM.010		TSU	The system must support the process where the Technical Support Unit (TSU) or authorized users negotiate terms, rates, and conditions with insurers for insurance packages.	Expected Result: 1. The system allows TSU to initiate and document negotiations with insurers regarding terms, rates, and conditions for a specific package. 2. The negotiated terms are reviewed and finalized before the package is presented to the client or encoded into the MBS. Acceptance Criteria: 1. TSU can initiate negotiation workflows with insurers from within the system. 2. The system allows updating package terms based on negotiation outcomes. 3. The system prevents finalizing or presenting the package until negotiations are completed and documented. Negative Scenario: 1. If TSU fails to document negotiation communications or does not complete the negotiation workflow, the system blocks the package from proceeding to client presentation or encoding in MBS. 3. If negotiated terms are missing, incomplete, or not attached to the package request, the system notifies the user and requires resolution before proceeding.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRPM.011		TSU	Facility to allow User to receive and view requests for product creation, amend, updating, or deletion based on client or business needs.	Expected Result: 1. Users can receive requests for product creation, update, or deletion through the system, triggered by client requirements or business needs. 2. View, review, and track requests and perform edit as needed. 3. Data entered or updated from Marketing is reflected in the systems. Acceptance Criteria: 1. The system displays all incoming requests with relevant details (request type, client, product line, reason). 2. Notifications are sent to responsible users when new requests are received. 3. System auto-populates fields from marketing input 4. No need for duplicate entry as data is synchronized automatically. Negative Scenario 1. Requests are not captured or displayed in the system, resulting in missed actions. 2. Requests are assigned to the wrong User, causing delays or errors. 3. TSU must re-enter data already provided by Marketing. 2.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRPM.012		TSU	Prepare and send quotation slip to Insurers indicating applicable terms and conditions.	Expected Result: 1. All details from the request form from Marketing should flow-in to the QS, with a provision for editing by TSU. 2. QS contains all required info, reviewed and approved before sending it to insurers. 3. The Quotation Slip remains editable by TSU TL/TH until Mancom sign-off. 4. Users can send the requested terms, rates, and conditions to insurers directly from the system (e.g., via email, system message, or integrated portal). 5. The system records and tracks all communications sent to insurers for audit and compliance. 6. Quotation slips are generated. Acceptance Criteria: 1. Quotation Slip is accurate, approved by TL or co-Officer, and sent within the agreed turn-around-time. 2. The system provides a secure interface for composing and sending terms, rates, and conditions to insurers. 3. TSU TL/TH can edit the Quotation Slip before Mancom sign-off. 4. Sent communications are logged with timestamps, recipient details, and message content. 5. Users receive confirmation of successful transmission. 6. The system allows users to view sent history and resend if needed. Negative Scenario Quotation slip is not delivered or tracked.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRPM.013		System	Facility to allow user to key-in the terms and conditions / feedback from the Insurers, which may be edited by TSU later on.	Expected Result: 1. Insurer responses are keyed-in to the system. 2. Insurers' terms are reviewed and approved before sending to Marketing 3. For client-specific packages, Marketing reviews the terms and conditions prior to any client presentation to ensure accuracy and alignment with client requirements. <i>Note:</i> The client presentation step applies only to client-specific packages where a tailored proposal or negotiation is required. Acceptance Criteria: 1. Comparative Tables are attached to the correct request and available to TSU. 2. Comparative Tables are accurate, includes all agreements, and sent within agreed turn-around-time. 3. Comparative Tables are available to Marketing for viewing only. 4. Monitoring sheet/dashboard updated. Negative Scenario 1. Feedback not logged 1. Quotations lost or inaccessible.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRPM.014		System	The system must automatically compile all insurers' feedback and responses into a single, consolidated comparative table for each package.	Expected Result: 1. The system gathers all feedback and responses from insurers related to a specific insurance package. 2. The system automatically generates a single, consolidated comparative table that includes all relevant terms, rates, conditions, and feedback from each insurer. 3. The comparative table is accurate, up-to-date, and available for viewing and export by authorized users. 4. The comparative table is attached to the correct package request and accessible to TSU and Marketing for review. Acceptance Criteria: 1. The system compiles all insurer responses into one comparative table per package. 2. The comparative table includes all agreements, terms, rates, and conditions from each insurer. 3. The comparative table is accurate, complete, and reflects the latest feedback. 4. The comparative table is available for authorized users to view, export, and share. 5. The comparative table is attached to the correct package request in the system. 6. All actions related to compiling and generating the table are logged for audit purposes. Negative Scenario 1. The system fails to compile all insurer feedback, resulting in incomplete or missing comparative tables. 2. The comparative table contains inaccuracies, outdated information, or is not generated at all.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Multiple comparative tables are generated for a single package, causing confusion. - The comparative table is not attached to the correct package request or is inaccessible to authorized users. - Actions related to compiling and generating the table are not logged, resulting in lack of audit trail and traceability.	
BRPM.015		MBS	Received product requirements from TSU. (i.e. computation and details that Marketing needed for their transactions). Product requirements and details from TSU are submitted via the system, triggering a ManCom review and signoff workflow. Only after ManCom's in-system approval are requirements automatically forwarded to MBS for processing. MBS receives only validated, signed-off requirements and returns incomplete submissions. Marketing is notified by the system when the package is ready. While some manual steps (like physical signatures) may still occur, most information should flow through the system.	Expected Result: - TSU submits product requirements through the system, triggering a ManCom review and signoff workflow with audit logging. - ManCom reviews and signs off within the system; approval is mandatory and logged. - After signoff, the system automatically forwards requirements to MBS. - MBS receives only complete, signed-off requirements, validates them, and sets up the package in the system. - If documentation is incomplete, MBS returns it to TSU for correction. - Once processed, the package is available in the system for Marketing, and Marketing is notified automatically. Acceptance Criteria: - Submission by TSU is system-based and triggers a mandatory ManCom workflow. - MBS cannot receive or process requirements until ManCom signoff is complete. - MBS receives only complete, approved documentation; incomplete submissions are returned to TSU.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				4. MBS sets up the package in the system, ensuring all details and computations are correct. 5. The system validates the package and makes it available for Marketing. 6. Marketing receives a system-generated notification when the package is ready. 7. All actions are logged for audit and traceability. Negative Scenario: 1. If requirements are incomplete or unsigned, the system blocks processing and prompts for correction and signoff. 2. MBS cannot proceed and returns the documentation to TSU. 3. The package is not available to Marketing until all issues are resolved, which may delay transactions. 4. All failed or blocked actions are logged for audit and process improvement.	
BRPM.016		TSU TL / TSU Officer / Operations	The system must allow Users to access supporting documents necessary for creating advisories. This means users should be able to retrieve, view, and utilize all relevant documentation directly within the system when preparing advisory communications (e.g., notifications, emails, or reports about product/package status). Documents could be but not limited to the following: Advisory / email broadcast that Package is ready. Package slip (signed) ManCom signed off	Expected Result: 1. Operations receives complete documentation and draft advisory. 2. All supporting documents are securely stored in the system. 3. Users attach required documents when drafting advisories. 4. The system automatically sends advisory notifications to relevant units when a package is created or updated. 5. Only authorized users can access or send advisories and view sensitive documents. 6. Advisory content is accurate, complete, and includes all necessary details. Acceptance Criteria: 1. Advisory notifications are sent automatically to all intended recipients. 2. All required documents are attached to the advisory. 3. Only authorized users can initiate or view advisories. 4. Advisory includes clear instructions and package details.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				5. Advisory is delivered within the required timeframe. 6. All advisory actions are logged for audit. Negative Scenario: 1. The system blocks advisories without required documents and prompts the user to resolve. 2. Advisories with missing or incorrect information cause confusion or delays. 3. Unauthorized users are denied access and attempts are logged. 4. Advisory not delivered on time, causing missed updates.	
BRPM.017		TSU Officer	The system must enable the TSU Officer to monitor the expiry or anniversary date of each insurance package	Expected Result: 1. TSU Officer can start renewal requests on time and update expiry dates as needed. 2. Renewal requests are approved, added to the system, and shared with stakeholders. 3. All changes and approvals are tracked, and notifications are sent as required. 4. Advisory with renewal details is sent automatically or manually to Marketing and stakeholders. Acceptance Criteria: 1. TSU Officer can view all packages with expiry or anniversary dates. 2. The system allows editing of expiry dates, terms, and rates during renewal. 3. Renewal requests are routed for approval with all details pre-filled. 4. All necessary approvals are recorded before proceeding. 5. MBS/Operations can accept or reject renewal documentation. 6. The system confirms updates and stores all supporting documents. 7. Advisory with renewal details is sent to all relevant teams.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. Renewal is not started on time, causing lapses or delays in coverage. 2. TSU Officer cannot update expiry dates, terms, or rates, leading to errors. 3. Stakeholders are not notified of changes, causing confusion or missed opportunities. 4. The system does not track changes or approvals, resulting in no audit trail. 5. Missed notifications or failed updates are logged as errors for process improvement.	
BRPM.018		System	Facility to allow User to generate Placement Update Reports (both for individual accounts and collectively for all accounts). This is to track and report the status of package creation, including key details such as but not limited to the following: account information, package status, expiry dates, terms, rates, and recent actions. Reports should support business monitoring, audit, and operational needs.	Expected Result: 1. Users (Marketing, TSU, MBS) can generate Package Status Update Reports for individual or all accounts via the system. 2. Reports include account details, package status, expiry dates, terms, rates, and recent actions. 3. Reports are accurate, timely, and can be filtered or customized as needed. 4. Access to reports is restricted by user roles and permissions. 5. Reports are exportable in standard formats (PDF, Excel) for sharing or archiving. Acceptance Criteria: 1. The system provides an easy-to-use interface for generating Package Status Update Reports for individual and all accounts. 2. Reports contain complete, accurate, and current information for each package. 3. Users can filter, customize, and export reports based on their access level. 4. Only authorized users can generate or access reports.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				5. Reports are generated within the defined SLA. 6. All report generation actions are logged for audit and traceability. Negative Scenario 1. Reports are missing required data, incomplete, or inaccurate. 2. Reports are delayed or not generated within the expected timeframe. 3. Unauthorized users can access or generate reports, causing data security issues. 4. Reports cannot be exported or shared as needed. 5. Report generation actions are not logged, resulting in lack of audit trail. 6. Users cannot generate reports due to system errors or lack of access, causing business delays.	
BRPM.019		System	Dashboard for real-time tracking and reporting	Expected Result: 1. Dashboard displays request status, reports, and comparative tables. Acceptance Criteria: 1. Users can filter, customize, and export data as per their access level. Negative Scenario 7. Dashboard not updating, inaccessible, or data is incorrect.	Must have.
BRPM.020		System	Capability to check for document security (password protection/encryption).	Expected Result: 1. All shared documents are password protected or encrypted. Acceptance Criteria: 1. Only authorized users can open/download documents.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario Documents are accessible without security, or authorized users are locked out.	
BRPM.021		System	Validation and approval workflow enforcement.	Expected Result: - The system enforces validation checks and multi-level approvals before any request or document can proceed to the next step. - All required fields and data are validated for completeness, accuracy, and compliance before approval is allowed. - Each approval step is completed by the designated authority (e.g., TSU TL, TSU TH, Marketing TL/TH/UH) within the defined SLA. - The system prevents requests or documents from being sent or finalized unless all validation and approval steps are successfully completed. Acceptance Criteria: - The system automatically checks all required fields and data for completeness and correctness before allowing approval. - Requests and documents cannot proceed to the next step unless all validation and approval steps are completed by the designated authority. - The system enforces multi-level approval workflows, ensuring each step is signed off by the correct user/role. - Approval actions are logged with timestamps, user details, and status. - The system notifies users of pending validation or approval actions and tracks resolution within the SLA. Negative Scenario	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. Requests or documents bypass validation or approval steps, resulting in incomplete, incorrect, or non-compliant data being processed. 2. Approval is missing, unclear, or not completed by the designated authority, causing delays or compliance issues. 3. The system allows requests or documents to proceed without proper validation or approval, leading to audit failures or operational risks. 4. Actions are not logged, resulting in lack of traceability and audit trail. 1. Users are not notified of pending validation or approval, causing missed or delayed actions.	
BRPM.022		System	Notification and integration for seamless data flow.	Expected Result: 1. System notifies users of status changes and integrates with BDOI tracking/reporting. Acceptance Criteria: 1. Notifications are timely, and data is synchronized with BDOI systems. Negative Scenario 5. Notifications not sent, or data not integrated	Must have.
BRPM.024		System	Ensure audit trail for all actions and changes.	Expected Result: 1. System logs all actions (creation, edits, approvals, sharing) for traceability. Acceptance Criteria: 1. Users can review a complete audit trail for any request or document.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario 1. Actions are not logged, or audit trail is incomplete.	

Usage Requirements

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent			
Marketing	Initiate product/package requests, review proposals, send final terms to clients.	485	145			< 5 seconds
MBS	Oversee dashboard reporting, ensure compliance and audit trail.	5	5			< 5 seconds
TSU	Prepare QS/PS, validate insurer responses, manage endorsements.	13	13			< 5 seconds

Questions	Response
When is the highest system demand expected (e.g., year-end)?	15 th and 30 th of the month
When are peak times for usage (e.g., 12:00 - 14:00 daily)?	08:00am – 05:30pm
Do mobile and desktop end users expect different levels of speed and performance?	No

Availability	
<i>Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.</i>	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	99.9%
When do people use the system (e.g., 9am-6pm daily, 24/7)?	07:00am – 06:30pm
How long can the system be down each month or year without causing issues?	RTO – 4hrs RPO – 24hrs
What times are acceptable for system maintenance?	As per bank standard
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	RTO – 4hrs RPO – 24hrs

Approval

This document has been approved as the official Business Requirements Document for the OPERATIONS request.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase.

Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
October 08, 2025	1.0	Initial Version	Zean C. Ibay
October 17,2025	1.0	Package and Non-Package discussion	Zean C. Ibay
October 27, 2025	1.0	Exclude Non-Package and include this as part of an addendum	Zean C. Ibay
November 03, 2025	1.0	Finalize BRD discussion for Package Maintenance	Zean C. Ibay
November 16, 2025	1.0	Request for approval	Zean C. Ibay

Business Needs and Requirements

I. Executive Summary (What do you need?)

A user-friendly maintenance module is required for authorized administrators (MBS/Admin, TSU) to directly manage and update Package Products without IT intervention.

- Direct management and update capability for Package Products.
- Automatic audit tracking for compliance.
- Synchronization of updates across all relevant systems.
- Streamlined approval, validation, and reporting processes.

Business Objective (Why do you need it?)

a. Business Goals

- ☐ Revenue
- ☐ Cost Savings
- ☐ Compliance/Regulatory Requirement (*attach the related law being addressed*)
- ☐ Customer Experience
- ☒ Others:

1. Streamline and centralize administrative tasks for managing and updating Products.
2. Reduce dependency on IT, minimize manual work, ensure synchronization and improve data accuracy.
3. Support audit and compliance requirements with robust tracking and reporting.
4. Enable quick decision-making with accurate, real-time reports.

b. Benefits

1. Automated workflows mean less manual work and approvals move more quickly.
2. The system checks data and steps automatically, reducing mistakes that can happen with manual entry or email-based processes.
3. Only authorized users can access sensitive documents, and files can be password-protected or encrypted.
4. The system keeps a record of all actions and approvals, making it easier to meet audit and regulatory requirements.

II. What is the current process? (Before)

1. Marketing initiates placement requests via email using a TSU request form.
2. TSU prepares and sends quotation slips to insurers.
3. Insurers respond with signed quotation slips or approved terms via email.
4. Quotations are compiled into comparative tables (Excel), shared via email.
5. Manual sign-off and advisory sending.

-
6. No password protection or encryption for shared documents.
 7. Most steps are manual, with limited system automation.

III. What is the envisioned process? (After)

1. Marketing logs requests directly into the system (automated logging).
2. System generates reference numbers and tracks requests.
3. Proposal and quotation workflows are systematized, reducing email dependency.
4. Comparative tables and reports are generated and shared via a secure dashboard.
5. Dashboard provides real-time tracking, reporting, and user-specific access.
6. Documents are shared securely (password protection/encryption).
7. Validation and approval steps are enforced within the system.
8. System monitoring of expiring packages.

IV. Table of Business Requirements

State key capabilities (ex: data encoding, file uploads, report generation, etc.) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRQID (ex: Key capability 1 should match with all BRQID1.#)

Business Key Capabilities:

1. Automated request handling.
2. Automatic reference numbers.
3. Easier quotation and proposal management.
4. Automatic comparison tables.
5. Real-time dashboard and reports.
6. Built-in checks and approvals.
7. Secure document sharing.
8. Works with existing systems.
9. Tracks all changes.
10. Expiring packages monitoring.

Business Requirements**Business Requirements**

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
As a <Persona>, I must be able to <Requirement> :					
BRQID.001		MBS TSU Marketing	Access and log-in to the system.	Expected Result: 1. Credential entered correctly. Acceptance Criteria: 1. Able to access the system. Negative Scenario: 1. System denies access.	Must have.
BRQID.002		System	Restrict access to authorized users.	Expected Result: 1. Secure access control. Acceptance Criteria: 1. Only authorized users can log in. 2. Users must enter valid credentials. 3. The system should deny access if the credentials are incorrect. Negative Scenario: 1. Users cannot log in to the system. 2. Unauthorized users attempt to access the system.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.003		System	There must be a capability to capture , store, and validate all mandatory, critical and product-specific fields.	Expected Result: 1. All required fields are captured and stored in the system. Acceptance Criteria: 1. System accepts and stores all product-specific fields without error. Negative Scenario: 1. Missing or incorrect field capture leads to incomplete records.	
BRQID.004		System	There must be a capability to apply validation rules based on product type.	Expected Result: 1. System enforces correct validation rules per product type. 2. Validation rules trigger appropriately based on input data for each product line. Acceptance Criteria: 1. Validation rules trigger appropriately based on input data. Negative Scenario: 1. Rules are not applied correctly, allowing invalid data entry.	Must have.
BRQID.005		System	There must be a capability to use shared templates with dynamic fields for product-specific data.	Expected Result: 1. The system utilizes shared document templates that can dynamically adjust to include fields specific to each insurance product line (e.g., CGL, Equipment Floater, Marine Cargo, Fire, Motor, etc.). 2. Documents are generated with accurate product-specific information. Acceptance Criteria: 1. Templates are populated correctly with relevant data for each product line. Negative Scenario: 1. Templates fail to populate fields, resulting in incomplete documents.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.006		System	There must be a capability to store and archive details of expired insurance products (policies/packages) for future reference or potential reactivation.	Expected Result: - Expired products (policies/packages) are retained in the system, accessible for future reference or potential reactivation, with all associated data (details, rates, communications) intact. Acceptance Criteria: - Upon expiry, product records are not deleted but archived and remain searchable. - Authorized users can retrieve expired product details, including all historical documentation. - Expired products are clearly tagged as “expired” in the system. - Access to expired product data is restricted to authorized personnel. Negative Scenario: - A user attempts to retrieve an expired product, but the system has deleted or failed to archive the record, resulting in data loss or inability to reference past terms.	Must have.
BRQID.007		System	The system ensures that all new business (new insurance placements) must automatically use the latest approved rate scheme.	Expected Result: - All new business transactions automatically apply the latest approved rate scheme, ensuring consistency and compliance. Acceptance Criteria: - The system enforces the use of the current rate scheme for all new business entries. - Users cannot select outdated rate schemes for new business. - Any attempt to use a non-current rate triggers an approval workflow. - The system logs the rate scheme version used for each new business transaction. Negative Scenario: - A user is able to create a new business entry using an outdated rate scheme, bypassing controls, leading to non-compliance with pricing policy.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.008		System	The system ensures that for renewal business, the application of the new rate scheme must be negotiated or clearly communicated, especially if renewal advice has already been sent to the client.	Expected Result: - For renewals, if the new rate scheme is to be applied after renewal advice has been sent, the system requires documentation of negotiation or communication with the client before updating the rate. Acceptance Criteria: - The system flags renewals where advice has already been sent. - Applying a new rate scheme after advice issuance requires uploading or logging proof of client communication/negotiation. - The system maintains a log of all communications and approvals related to rate changes for renewals. - Renewal records show the effective date of the new rate scheme and any negotiation history. Negative Scenario: - The system allows a new rate scheme to be applied to a renewal after advice has been sent, without requiring or recording any client communication or negotiation, resulting in client disputes or compliance issues.	Must have.
BRQID.009		Marketing AO / TSU	Submit approved Package Request Form.	Expected Result: - System allows Users to submit the Package Request Form with all required client information, requested terms, and conditions. - The system validates that all mandatory fields are completed and correct before allowing submission. - The Package Request Form is reviewed and approved by the Marketing Team Lead (TL), Team Head (TH), or Marketing Unit Head (UH). - TSU TL receives a complete and approved Package Request Form from Marketing AO. Acceptance Criteria: - The system allows Marketing AO/TSU to input and submit all client information and requested terms and conditions for each package.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. Mandatory fields are clearly indicated and must be completed before submission. 3. The system validates data (correct formats, ranges, required fields) and prevents saving if errors are detected. 4. The Package Request Form is reviewed and approved by the relevant authority (TL, TH, or UH) before proceeding. 5. The system prevents submission of incomplete or incorrect forms. Negative Scenario: 1. Users are able to submit incomplete or incorrect Package Request Forms. 2. The system does not validate entries, allowing errors to pass through. 3. The Package Request Form is not reviewed or approved by the relevant authority, causing delays or compliance issues. 4. The Package Request Form is lost or not forwarded to TSU TL, causing missed or delayed processing.	
BRQID.010		TSU TL	Review package requests and recommends for approval.	Expected Result: 1. TSU Team Lead (TL) reviews the submitted package request for completeness, accuracy, and compliance. 2. TSU TL provides a recommendation for approval, including any necessary feedback or required changes. 3. TSU Team Head (TH) reviews the recommendation and provides formal approval within the system. 4. The approved package request is ready for the next step in the workflow (e.g., preparation of quotation slip, negotiation with insurers). Acceptance Criteria: 1. The system allows TSU TL to review and recommend package requests for approval. 2. TSU TL's recommendation is clearly documented and visible to TSU TH.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- TSU TH can review the recommendation and provide approval within the defined SLA (Service Level Agreement). - The system prevents the package request from proceeding to the next step unless TSU TH approval is completed. - All review, recommendation, and approval actions are logged with timestamps and user details. Negative Scenario: - TSU TL fails to review or recommend the package request within the SLA, causing delays. - TSU TH does not provide approval, or approval is missing/unclear, preventing the package from moving forward. - The system allows the package request to proceed without TSU TH approval, resulting in compliance issues.	
BRQID.011		TSU	The system must support the process where the Technical Support Unit (TSU) or authorized users negotiate terms, rates, and conditions with insurers for insurance packages.	Expected Result: - The system allows TSU to initiate and document negotiations with insurers regarding terms, rates, and conditions for a specific package. - The negotiated terms are reviewed and finalized before the package is presented to the client or encoded into the MBS. Acceptance Criteria: - TSU can initiate negotiation workflows with insurers from within the system. - The system allows updating package terms based on negotiation outcomes. - The system prevents finalizing or presenting the package until negotiations are completed and documented. Negative Scenario: - If TSU fails to document negotiation communications or does not complete the negotiation workflow, the system blocks the package from proceeding to client presentation or encoding in MBS.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. If negotiated terms are missing, incomplete, or not attached to the package request, the system notifies the user and requires resolution before proceeding.	
BRQID.012		TSU	Facility to allow User to receive and view requests for product creation, amend, updating, or deletion based on client or business needs.	Expected Result: - Users can receive requests for product creation, update, or deletion through the system, triggered by client requirements or business needs. - View, review, and track requests and perform edit as needed. - Data entered or updated from Marketing is reflected in the systems. Acceptance Criteria: - The system displays all incoming requests with relevant details (request type, client, product line, reason). - Notifications are sent to responsible users when new requests are received. - System auto-populates fields from marketing input - No need for duplicate entry as data is synchronized automatically. Negative Scenario - Requests are not captured or displayed in the system, resulting in missed actions. - Requests are assigned to the wrong User, causing delays or errors. - TSU must re-enter data already provided by Marketing.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.013		TSU	Prepare and send quotation slip to Insurers indicating applicable terms and conditions.	Expected Result: 1. All details from the request form from Marketing should flow-in to the QS, with a provision for editing by TSU. 2. QS contains all required info, reviewed and approved before sending it to insurers. 3. The Quotation Slip remains editable by TSU TL/TH until Mancom sign-off. 4. Users can send the requested terms, rates, and conditions to insurers directly from the system (e.g., via email, system message, or integrated portal). 5. The system records and tracks all communications sent to insurers for audit and compliance. 6. Quotation slips are generated. Acceptance Criteria: 1. Quotation Slip is accurate, approved by TL or co-Officer, and sent within the agreed turn-around-time. 2. The system provides a secure interface for composing and sending terms, rates, and conditions to insurers. 3. TSU TL/TH can edit the Quotation Slip before Mancom sign-off. 4. Sent communications are logged with timestamps, recipient details, and message content. 5. Users receive confirmation of successful transmission. 6. The system allows users to view sent history and resend if needed. Negative Scenario 1. Quotation slip is not delivered or tracked.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.014		System	Facility to allow user to key-in the terms and conditions / feedback from the Insurers, which may be edited by TSU later on.	Expected Result: 1. Insurer responses are keyed-in to the system. 2. Insurers' terms are reviewed and approved before sending to Marketing 3. Marketing to review prior to Client presentation. Acceptance Criteria: 1. Comparative Tables are attached to the correct request and available to TSU. 2. Comparative Tables are accurate, includes all agreements, and sent within agreed turn-around-time. 3. Comparative Tables are available to Marketing for viewing only. 4. Monitoring sheet/dashboard updated. Negative Scenario 1. Feedback not logged 2. Quotations lost or inaccessible.	Must have.
BRQID.015		System	The system must automatically compile all insurers' feedback and responses into a single, consolidated comparative table for each package.	Expected Result: 1. The system gathers all feedback and responses from insurers related to a specific insurance package. 2. The system automatically generates a single, consolidated comparative table that includes all relevant terms, rates, conditions, and feedback from each insurer. 3. The comparative table is accurate, up-to-date, and available for viewing and export by authorized users. 4. The comparative table is attached to the correct package request and accessible to TSU and Marketing for review. Acceptance Criteria:	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. The system compiles all insurer responses into one comparative table per package. 2. The comparative table includes all agreements, terms, rates, and conditions from each insurer. 3. The comparative table is accurate, complete, and reflects the latest feedback. 4. The comparative table is available for authorized users to view, export, and share. 5. The comparative table is attached to the correct package request in the system. 6. All actions related to compiling and generating the table are logged for audit purposes. Negative Scenario 1. The system fails to compile all insurer feedback, resulting in incomplete or missing comparative tables. 2. The comparative table contains inaccuracies, outdated information, or is not generated at all. 3. Multiple comparative tables are generated for a single package, causing confusion. 4. The comparative table is not attached to the correct package request or is inaccessible to authorized users. 5. Actions related to compiling and generating the table are not logged, resulting in lack of audit trail and traceability.	
BRQID.016		MBS	Received product requirements from TSU. (i.e. computation and details that Marketing needed for their transactions).	Expected Result: 1. The prepared product requirements are submitted for review and signoff by the Management Committee (ManCom). The system triggers a workflow that requires ManCom's approval before proceeding.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- ManCom reviews the documentation and, if satisfied, provides a signoff within the system. This signoff is logged and tracked for audit purposes. - Once ManCom signoff is completed, the system automatically forwards the approved product requirements to MBS. - MBS receives the product requirements in a complete and clear format, validates the information, and sets up the package in the system for marketing transactions. - MBS accepts the requirements, then accurately encodes/sets up the package (with computation logic) in the system. - The package becomes available for Marketing's transactions. - Marketing is notified that the package is available and ready for use, with all computations and details functioning as intended. Acceptance Criteria: - The system must trigger a mandatory ManCom signoff workflow before product requirements are transmitted from TSU to MBS. - Product requirements cannot be received by MBS unless ManCom signoff is completed. - MBS receives complete package documentation from TSU, including all computation formulas and product details needed by Marketing. - MBS confirms that all required information is present and correct. If incomplete, MBS returns the documentation to TSU for correction before proceeding. - MBS encodes/sets up the package in the system, ensuring all computations and product details match the requirements. - System validation confirms that the encoded package reflects the intended logic and details. - The package is visible and selectable in the system for Marketing transactions. - Marketing is notified that the package is available and ready for use.	

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				Negative Scenario: 1. If MBS receives incomplete or unsigned product requirements, the system must prevent encoding the package and prompt for correction and proper signoff. 2. MBS cannot proceed with encoding the package in the system. 3. MBS returns the documentation to TSU, requesting clarification or missing details. 4. The package is not made available to Marketing until the issue is resolved, potentially causing delays in transactions.	
BRQID.017		TSU TL / TSU Officer / Operations	The system must allow Users to access supporting documents necessary for creating advisories. This means users should be able to retrieve, view, and utilize all relevant documentation directly within the system when preparing advisory communications (e.g., notifications, emails, or reports about product/package status). Documents could be but not limited to the following: • Advisory / email broadcast that Package is ready. • Package slip (signed) • ManCom signed off	Expected Result: 1. Operations receive complete documentation and draft advisory. 2. All supporting documents related to product packages, approvals, computations, and other relevant materials are stored securely within the system. 3. The user references or attaches the necessary supporting documents while drafting the advisory. The system ensures that only authorized users can access sensitive documents. Acceptance Criteria: 1. Only authorized users can access supporting documents. 2. The system enforces access restrictions based on user roles and permissions. 3. Documents are accurate and complete. 4. Advisory to intended Users includes all necessary instructions. 5. Delivered within SLA. Negative Scenario: 1. If a user attempts to create an advisory without access to necessary supporting documents, the system blocks the action and prompts for resolution. 2. Documentation is missing or incorrect. 3. Advisory is unclear or incomplete. 4. Operations do not receive the materials.	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.018		TSU Officer	The system must enable the TSU Officer to monitor the expiry or anniversary date of each insurance package	Expected Result: 1. The TSU Officer can initiate renewal requests on time, with the ability to edit and extend expiry dates as needed. 2. The TSU Officer can also edit package terms and rates during renewal, to accommodate any changes required. 3. Renewal requests are routed for approval, sent to MBS, accepted, added to the system, and broadcasted to stakeholders. 4. All steps, including changes to expiry dates, terms, and rates, are documented, approvals are tracked, and notifications are sent as required. Acceptance Criteria: 1. The TSU Officer is able to view all packages with expiry or anniversary dates. 2. The system allows the TSU Officer to edit expiry dates to extend coverage. 3. The system allows the TSU Officer to edit package terms and rates during renewal. 4. Renewal requests are created and routed to TSU TL for negotiation with insurers, with all relevant package details pre-filled. 5. The system requires and records all necessary approvals (signed slip, sign-off sheet) before proceeding. 6. MBS/Operations can accept or reject the renewal documentation. 7. The system confirms the update and stores all supporting documents. 8. An advisory is automatically or manually sent to all relevant Marketing teams and stakeholders, including details about the renewed package, updated expiry date, terms, and rates. Negative Scenario:	Must have.

Business Requirement Document

Product Maintenance

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				1. The renewal process is not initiated on time, causing the package to lapse or be renewed late, resulting in a gap in coverage or operational disruption. 2. The TSU Officer is unable to edit expiry dates, terms, or rates, leading to incorrect or outdated package details. 3. Stakeholders are not informed of changes, leading to confusion or missed business opportunities. 4. The system does not record changes or approvals, resulting in lack of audit trail and traceability. 5. The system logs the missed notification or failed update as an error, and an incident report is generated for process improvement.	
BRQID.019		System	Facility to allow User to generate Placement Update Reports (both for individual accounts and collectively for all accounts).	Expected Result: 1. Users (Marketing, TSU, MBS) can generate Placement Update Reports for individual accounts and for all accounts collectively through the system. 2. Reports include all required data such as account details, package status, expiry dates, terms, rates, and recent actions. 3. Reports are generated accurately, are timely, and can be filtered or customized as needed. 4. Access to reports is restricted based on user roles and permissions. 5. Reports are exportable in standard formats (e.g., PDF, Excel) for sharing or archiving. Acceptance Criteria: 1. The system provides a user-friendly interface for generating Placement Update Reports for both individual and collective accounts. 2. Reports contain complete, accurate, and up-to-date information for each account/package.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				- Users can filter, customize, and export reports according to their access level. - Only authorized users can generate and access reports. - Reports are generated within the defined SLA (e.g., within seconds of request). - All report generation actions are logged with timestamps and user details. Negative Scenario - Reports are missing required data, are incomplete, or contain inaccuracies. - Reports are delayed or not generated within the expected timeframe. - Unauthorized users are able to access or generate reports, leading to data security issues. - Reports are not exportable or cannot be shared as needed. - Actions related to report generation are not logged, resulting in lack of audit trail and traceability. - Users are unable to generate reports due to system errors or lack of access, causing delays in business processes.	
BRQID.020		System	Dashboard for real-time tracking and reporting	Expected Result: - Dashboard displays request status, reports, and comparative tables. Acceptance Criteria: - Users can filter, customize, and export data as per their access level. Negative Scenario - Dashboard not updating, inaccessible, or data is incorrect.	Must have.

BR ID	Process Step #	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRQID.021		System	Capability to check for document security (password protection/encryption)	Expected Result: 1. All shared documents are password protected or encrypted. Acceptance Criteria: 1. Only authorized users can open/download documents. Negative Scenario 1. Documents are accessible without security, or authorized users are locked out.	Must have.
BRQID.022		System	Validation and approval workflow enforcement	Expected Result: 1. The system enforces validation checks and multi-level approvals before any request or document can proceed to the next step. 2. All required fields and data are validated for completeness, accuracy, and compliance before approval is allowed. 3. Each approval step is completed by the designated authority (e.g., TSU TL, TSU TH, Marketing TL/TH/UH) within the defined SLA. 4. The system prevents requests or documents from being sent or finalized unless all validation and approval steps are successfully completed. Acceptance Criteria: 1. The system automatically checks all required fields and data for completeness and correctness before allowing approval. 2. Requests and documents cannot proceed to the next step unless all validation and approval steps are completed by the designated authority. 3. The system enforces multi-level approval workflows, ensuring each step is signed off by the correct user/role. 4. Approval actions are logged with timestamps, user details, and status.	Must have.

				5. The system notifies users of pending validation or approval actions and tracks resolution within the SLA. Negative Scenario 1. Requests or documents bypass validation or approval steps, resulting in incomplete, incorrect, or non-compliant data being processed. 2. Approval is missing, unclear, or not completed by the designated authority, causing delays or compliance issues. 3. The system allows requests or documents to proceed without proper validation or approval, leading to audit failures or operational risks. 4. Actions are not logged, resulting in lack of traceability and audit trail. 5. Users are not notified of pending validation or approval, causing missed or delayed actions.	
BRQID.024		System	Notification and integration for seamless data flow	Expected Result: 1. System notifies users of status changes and integrates with BDOI tracking/reporting. Acceptance Criteria: 1. Notifications are timely, and data is synchronized with BDOI systems. Negative Scenario 1. Notifications not sent, or data not integrated	Must have.
BRQID.025		System	Ensure audit trail for all actions and changes	Expected Result: 1. System logs all actions (creation, edits, approvals, sharing) for traceability. Acceptance Criteria: 1. Users can review a complete audit trail for any request or document.	Must have.

				Negative Scenario 1. Actions are not logged, or audit trail is incomplete.	

Usage Requirements

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (Percentage %)	Expected Response Time
		Max	Concurrent			
Marketing	Initiate product/package requests, review proposals, send final terms to clients.	485	145			< 5 seconds
MBS	Oversee dashboard reporting, ensure compliance and audit trail.	5	5			< 5 seconds
TSU	Prepare QS/PS, validate insurer responses, manage endorsements.	13	13			< 5 seconds

Questions	Response
When is the highest system demand expected (e.g., year-end)?	15 th and 30 th of the month
When are peak times for usage (e.g., 12:00 - 14:00 daily)?	08:00am – 05:30pm
Do mobile and desktop end users expect different levels of speed and performance?	No

Availability	
<i>Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.</i>	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	99.9%
When do people use the system (e.g., 9am-6pm daily, 24/7)?	07:00am – 06:30pm
How long can the system be down each month or year without causing issues?	RTO – 4hrs RPO – 24hrs
What times are acceptable for system maintenance?	As per bank standard
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	RTO – 4hrs RPO – 24hrs

Approval

This document has been approved as the official Business Requirements Document for the OPERATIONS request.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.
