About this Book

This book provides a description of all Standard Reports in PREMIA. In addition, it explains the Report Generation process.

Structure

Reports in this book have been categorized based on the applicable reports for each User Category, by module.

Prerequisites

This book assumes that the reader or user is familiar with the PREMIA modules and the terminologies used in it.

Objectives

The reference aims at understanding:

- Reports User Interface
- Purpose
- Input
- Output

Non-Objectives

The reference **does not** aim at explaining

- Business concepts of PREMIA
- ERP Concepts
- Technical aspects of Report Generation

Manual Conventions

The following conventions are used in this book:

- The report generation procedure is common to all the Reports.
- The introductory sections of the manual explain all common aspects of the report interface.
- Tabulations contain the important Input and Output fields.
- The document contains one of the pages of the output of each report.
- The values '0' and 'zzzzzzzzzzzz' (In Lower case) for any field in the Report Interface denote complete range of values.

Introduction

Reports are the means to monitor the progress of a business. In other words, they enable the user to know the results of transactions. Every module has a specific set of reports that contain information that addresses the report requirements of most organizations.

Report Design

Report interface enables the user to generate reports in PREMIA. There are two approaches to Reports Design:

- Standard Report Interfaces: Preset input parameters accept inputs from the users.
- Dynamic Report Interfaces: User-defined input parameters set using the Report Generator tool appear on the Report Interface screen.

The user enters the requisite parameters in the interface.

Standard Report Interface

The following screenshot displays a sample Standard Report interface:

The screenshot shows a web-based report interface for 'INSURANCE CO LTD'. The interface includes a header with the 3i Infotech logo on the left and the PREMIA logo on the right. The main content area is a light blue background with various input fields and options for generating a report.

Input Fields:

- From Transaction code:
- To Transaction code:
- From Document Number:
- To Document Number:
- From Document Date:
- To Document Date:
- From Main Account Code:
- To Main Account Code:
- From Sub Account Code:
- To Sub Account Code:
- User Id:

Options:

- Order By:
 - ☒ Document Date
 - ☐ Document Number
- Combine Transactions: ☐
- Status:
 - ☒ Posted
 - ☐ Unposted
 - ☐ Both

Fig. 1 – Sample Standard Report Interface

Report Interfaces usually have range of Codes as reference values. These reference values form the basis of Reports. To navigate to the consecutive fields, press 'Tab' key.

The input fields in the report interface are one of the following types:

- Data – Entry
- LOV Help
- Check Box
- Radio button or Option button
- Date

Data – Entry:

Enter the requisite data in this type of field. If the report has to be generated for all values, enter '0' in the 'From' field and 'zzzzzzzzzzzz' in the 'To' field. Enter '0' in the 'From' field and '9999999999' in the 'To' field.

NOTE

To specify a complete range of fields the user needs to press 'tab' key. The values '0' and 'zzzzzzzzzzzz' or '0' and '9999999999' appear as applicable.

LOV Help:

Select the requisite value from the List of Values Help. It is possible to select a complete range of values (0 and zzzzzzzzzzzz) for this type of field.

Check Box:

Some reports have checkboxes indicating the criteria for the reports.

Radio Button:

The same input parameters produce different reports based on the option the user selects.

Date:

Report generation happens for a specific period of time in the calendar. Generally, 'From' and 'To' fields are available to select the range of dates for Report generation.

There are some reports where the user selects the type of input fields. There are two option buttons such as 'Range' and 'Selection'.

Range:

This option displays two fields for the 'From' and 'To' values to be input.

Selection:

This option displays one field with List of Value Help from which the user selects the required value.

NOTE

For some of the reports this option is not functional.

To generate a report:

Enter the requisite input parameters in the Report Interface.

Press 'Tab' key to navigate to the consecutive fields. The 'Report' window appears when the user clicks the 'Tab' key after the data entry on the last field of the Report Interface. The following screenshot displays the Report popup window.

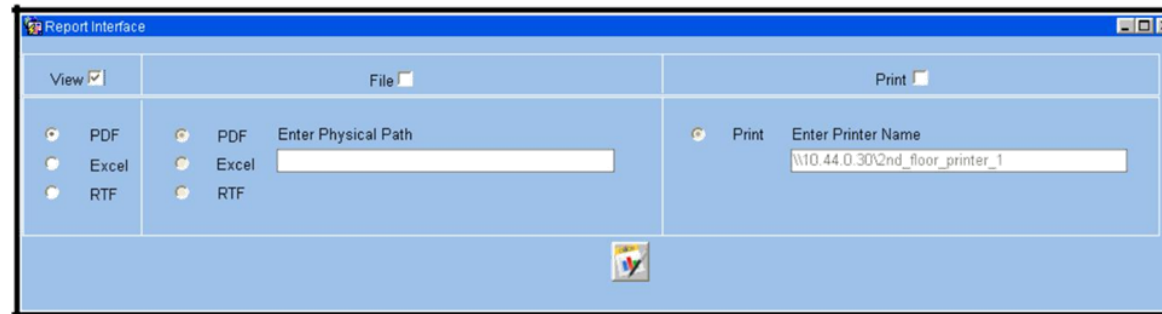

Fig. 2 – Report popup

Select one of the options for the Report.

Click the 'Run' button

The following table lists the various options and their purposes:

Option	Purpose
View	Report Window displays the Report.
Mail	The report is available as the content in a mail window of Microsoft Outlook or Outlook Express.
Print	The report is available as a PDF that the user can print for reference.
HTML	The report is available as a HTML file in the location that the user specifies for the Reports.
File	The user saves the report as a file in a specific location.
PDF	The report is available as a PDF file in the location that the user specifies for the Reports.
Excel	The report is available as an Excel file.
XML	The report is available as an XML file in the location that the user specifies for the Reports.
Publish and Subscribe	The user schedules the report generation on specific date and time. The user can subscribe the reports using this feature. For detailed explanation on the feature refer the section on 'Publish and Subscribe'.

NOTE:

The user specifies the path for Reports in:

Core → Installation Attributes → Company Parameter → REP_PATH field

The other fields in the 'Report' screen are as follows:

Printer Name

This field refers to the name of the Printer that is available to print Reports. Select the printer from the List of Values Help.

Number of Copies

Enter the required number of copies of Print outs of reports.

Logo Y/N

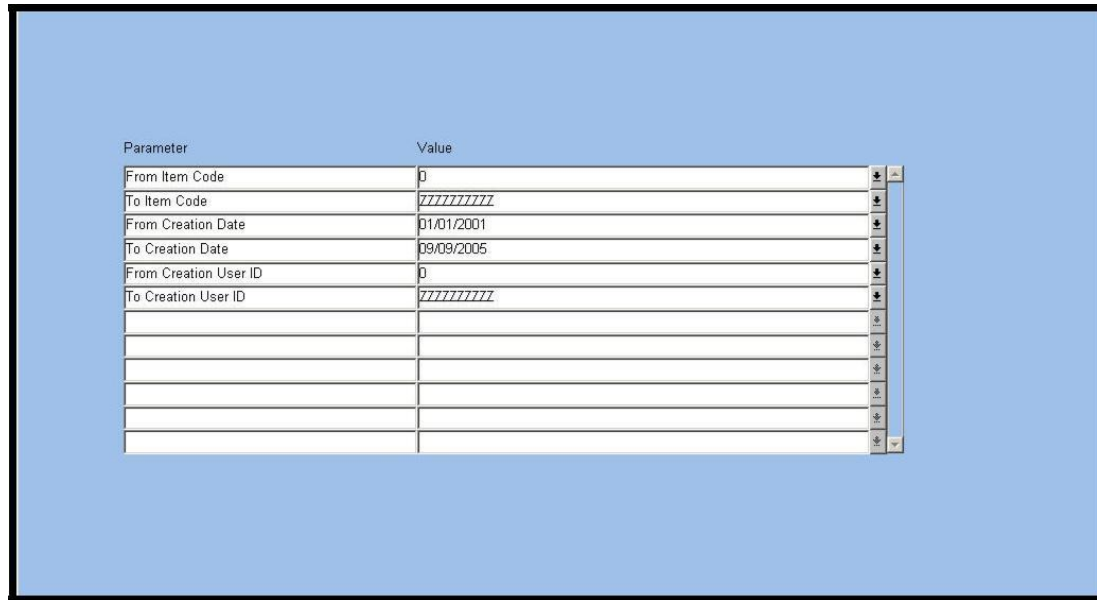

Select this checkbox for the Company to appear on the Report.

File Name

The Name of the Report file for the options such as HTML, PDF, and XML appears in this field. This name is modifiable.

Dynamic Report Interface

The following screenshot displays a sample Dynamic Report Interface:

Parameter	Value
From Item Code	0
To Item Code	777777777
From Creation Date	01/01/2001
To Creation Date	09/09/2005
From Creation User ID	0
To Creation User ID	777777777

Fig. 3 – Sample Dynamic Report Interface

The fields in this interface are as follows:

Parameter

This field displays the Parameters which the user selects using the Report Generator tool. The Report Generator tool enables the user to choose the fields on the Report.

Value

Enter the value that is the basis of the report.

Report Layout

The Layout is common across all PREMIA Reports. The following screenshot displays a sample PREMIA Report:

Fig. 4 – Main A/c Trial Balance

Every report has the following three sections in order:

Report Header

Input Parameters

Report Data

Report Header:

The Report Header section consists of the following details:

- Company Name
- User ID
- Report ID
- Run Date
- Page Number

Input Parameters:

The details of the Input parameters specified at the Report Interface screen.

Report Data:

This section contains the details of the Report.

NOTE:

The reports with the data that require approval have provisions for signature of the Approver. Some reports have '**Remarks**' field for approval. The Status of the document such as '**Submitted**', '**Posted**', or '**Approved**' is displayed in some of the reports.

Schedule to Income and Expense Statement

Purpose of Report	To compare the Incomes and Expenses in this year for a specific period with those of the last year for the same period.
Input Parameters	Format ID, From Date, To Date
Key Output Fields	Particulars, This Period, This Year

Report Analysis:

The report helps the user to compare the incomes and expenses of current year this period versus last year this period. It is also useful to identify the proportion of incomes/expenses for the particular period versus YTD balances.

Fig. 7 – Schedule to Income and Expense Statement

Income and Expense Statement

Purpose of Report	Gives summary of surplus or deficit for the period
Input Parameters	Format ID, From Date, To Date, Rounding Option
Key Output Fields	Particulars, Last Year This Period, This Year This Period, Last Year YTD, This Year YTD

Report Analysis:

The report provides a snapshot of surplus or deficit arrived for a particular period and gives the current YTD balance. It helps to compare the last year totals with current year totals.

General Ledger

Accounts-in-Charge – Strategic Report

Main Accounts Trial Balance

Purpose of Report	To provide monthly closing balance details for Main A/c Codes.
Input Parameters	Calendar Month and Calendar Year
Key Output Fields	Account Number, Account Name, Closing Balance (Debits and Credits)

Report Analysis:

The report is useful to verify the Double Entry Book Keeping in terms of Main A/c. The Trial Balance is to ensure arithmetical accuracy of accounts. In case there is inaccuracy of accounts, the balance is transferred to suspense account.

End Of Report						

Fig. 9 – Main Accounts Trial Balance

Main Accounts Trial Balance by Branch/Department

Purpose of Report	To provide monthly closing balance details for Division, Department and Main A/c Codes. The Trial Balance is to ensure arithmetical accuracy of accounts.
Input Parameters	Calendar Month, Calendar Year, Division Code, Department Code, Main A/c Code, Order By Option Buttons
Key Output Fields	Main A/c Code, Division/Department, Account Number, Account Name, Closing Balance (debits and credits)

Report Analysis:

The report is useful to verify the Double Entry Book Keeping in terms of Division and Main A/c. If the Order By option is Division, all accounts of the division are covered and their sub totals are recorded. The grand total is the sum of all sub totals.

If the Order By option is Main A/c, the divisions within the Main A/c are covered and their sub totals recorded. The grand total is the sum of all the division's sub totals.

Accounts Receivable Reports

Accounts-Receivables-in-Charge – Operational Report

Debtors Aged analysis - detailed

Purpose of Report	This report displays the list of debtors in a particular parent customer group along with the Main Account Code details for the transactions made within a period. In addition, the report displays the details based on Base Currency/Foreign Currency with the data sorted by Due Date or Document Date.
Input Parameters	Selection option button, Parent Customer Code, Main Account Code, Sub Account Code, Date , and Order By basis
Key Output Fields	Parent supplier code, Main account name, Transaction code, Document number, Document date, Outstanding amount, On Account and Aging.

Report Analysis:

This report enables users to know the Outstanding balance (Sub Account Total) by pre-defined aging period of each customer (Main Account). In addition, the transaction list of each customer along with the document details of aging for the period is available. The users analyze the total outstanding amount that is pending from the Parent Customer (in all accounts) to decide on the action plan.

Fig. 37 – Debtors aged analysis – Summary

Payment received for invoices through a cheque number

Purpose of Report	To view the full listing of the cheques received from the debtors on invoices for a given period. The interface allows the users to obtain details by Bank Account or Customer for a given period.
Input Parameters	Document Number, Document Date, Bank Code, and Customer Code
Key Output Fields	Customer Code, Cheque number and Cheque date, Cheque amount, Bank name, Document number, Invoice number, Invoice amount, and Adjusted amount.

Report Analysis:

This report enables the users to track the date on which the payment is received from the customer. This report also has the Invoice Number. This report acts as a cheque register that records the receipts (other than PDC) from the customer.

In addition, the report identifies the adjusted amount which is the difference between the invoice amount and the cheque amount. The amount includes Credit Note amount and Cash Discount.

Bank Reconciliation Statement

Purpose of Report	This report enables users to view the Bank Account Balance and the Company Book Balance. This report records the bank entries based on the Accrual concept. According to this concept, the expense is accounted when it is actually accrued and not during payment. In addition, the income is to be realized when it is earned and not on receipt basis.
Input Parameters	Bank Code, Bank Account Number and Date
Key Output Fields	Document Date, Transaction code, Document Number, Description, Cheque Date, Cheque number and Amount.

Report Analysis:

This report enables the company to avoid fraudulent data in Finance records. The report is to be prepared at regular intervals to track finance-related data. The report helps reason out the long pending transactions.

Fig. 50 – PDC Issued due for payment

PDC (Received) on Hand by Division/ Department and Bank

Purpose of Report	This report displays the details of PDC received and available (on hand) with the account details of departments or divisions for a particular bank account as of date. The user is able to generate the report based on a particular Main Bank A/c/Sub Bank A/c Criteria (Customer's Bank Name and Account Number). In addition, the report displays the values in LC (converts PDC received in Foreign Currency into Local currency)
Input Parameters	Date, Division Code, Department Code, Main A/c Code, Sub A/c Code, Bank Main A/c Code, and Bank Sub A/c Code
Key Output Fields	Due Date, Cheque Number, Main Account, Sub Account, Customer Name, Currency, Cheque Amount, LC Value, Receipt Number and Date, Division, Department.

Report Analysis:

This Report enables users to view the details of PDCs received from a particular department (Example: Petrol Department of sales division) as well as those available (on hand) with the Accounts Receivable department for a particular Bank account as of date. Cheque details include the PDCs due to be deposited also.

END OF REPORT								

Fig. 54 – PDC Issued During a period by Division/ Department and Bank

PDC Due for Payment by Division/ Department and Bank

Purpose of Report	This report displays the details of PDCs issued that are due for payment as of date in a particular division / department for a particular bank account, due date wise. This report is also used as a cheque register-issued document wherein users are able to view cheque details of PDCs issued through a particular department. The report converts and displays the values in LC from FC.
Input Parameters	Date, Division Code, Department Code, Main A/c Code, Sub A/c Code, Bank Main A/c Code, Bank Sub A/c Code
Key Output Fields	Division, Department, Due Date, Cheque Number, Account Name, Currency, Cheque Amount, LC Amount, Receipt Number, Bank Code, Bank Name

Report Analysis:

This report helps users to know the PDCs amount due for payment from a particular bank account in the near future (Example: next week) and thereby enables them to maintain the appropriate current balance.

This report enables users to view details of PDCs issued and due for payment from a particular division for a range of suppliers also.
