

BDOI Submitted Policies
Business Requirements Document (BRD) Template
Prepared by: ESG-BPS

Strictly Confidential and for Internal Use of BDO only

Business Needs and Requirements

- **Executive Summary (What do you need?)**

This section provides a concise overview of the project to be accomplished with its implementation.

Submitted Policies refer to insurance policy documents provided by clients with existing mortgage accounts in BDO, where the insurance coverage is obtained from providers outside of BDO Insurance (BDOI). These submissions serve as proof of compliance with the bank's insurance requirements for mortgaged assets, despite the policies not being sourced through BDOI.

In addition, these submitted policies present an opportunity for the bank to proactively engage clients, with the objective of converting their existing external insurance coverage to BDOI or securing future renewals and new policy bookings under BDOI. This supports business growth and strengthens client retention within the BDO ecosystem.

Given the volume, complexity, and strategic importance of managing these submitted policies, this initiative aims to streamline and optimize the end-to-end processes for handling submitted insurance policies across both New Business and Renewal Business. This covers all BDOI market segments, including CBG Motor, CBG Fire, NON-CBG Corporate & Branches, and NON-CBG Retail.

The main focus of this enhancement is to improve data accuracy, process visibility, operational efficiency, and compliance with internal and insurer requirements. Consequently, the streamlined process will enhance coordination between the responsible BDOI Business Units and Insurers, ensuring accurate monitoring, timely quoting, and efficient policy placement of submitted insurance policies.

- **Business Objective (Why do you need it?)**

- a. **Business Goals**

Indicate the goal of the requested change. Select all applicable reasons why the change is needed. If the objective is not listed, choose "Others" and specify.

- ☐ **Revenue**
- ☐ **Cost Savings**
- ☐ **Compliance/Regulatory Requirement** *(attach the related law being addressed)*
- ☐ **Customer Experience**
- ☐ **Tech Obsolescence**
- ☐ **Others:**

1. To optimize and simplify end-to-end workflows to reduce manual handling, eliminate redundant steps, and ensure faster processing across all types of submitted policies.
2. To establish clear handoffs and aligned responsibilities between Submitted Handlers, Sanitation Teams, Marketing Team, and Operations to minimize delays and communication gaps.

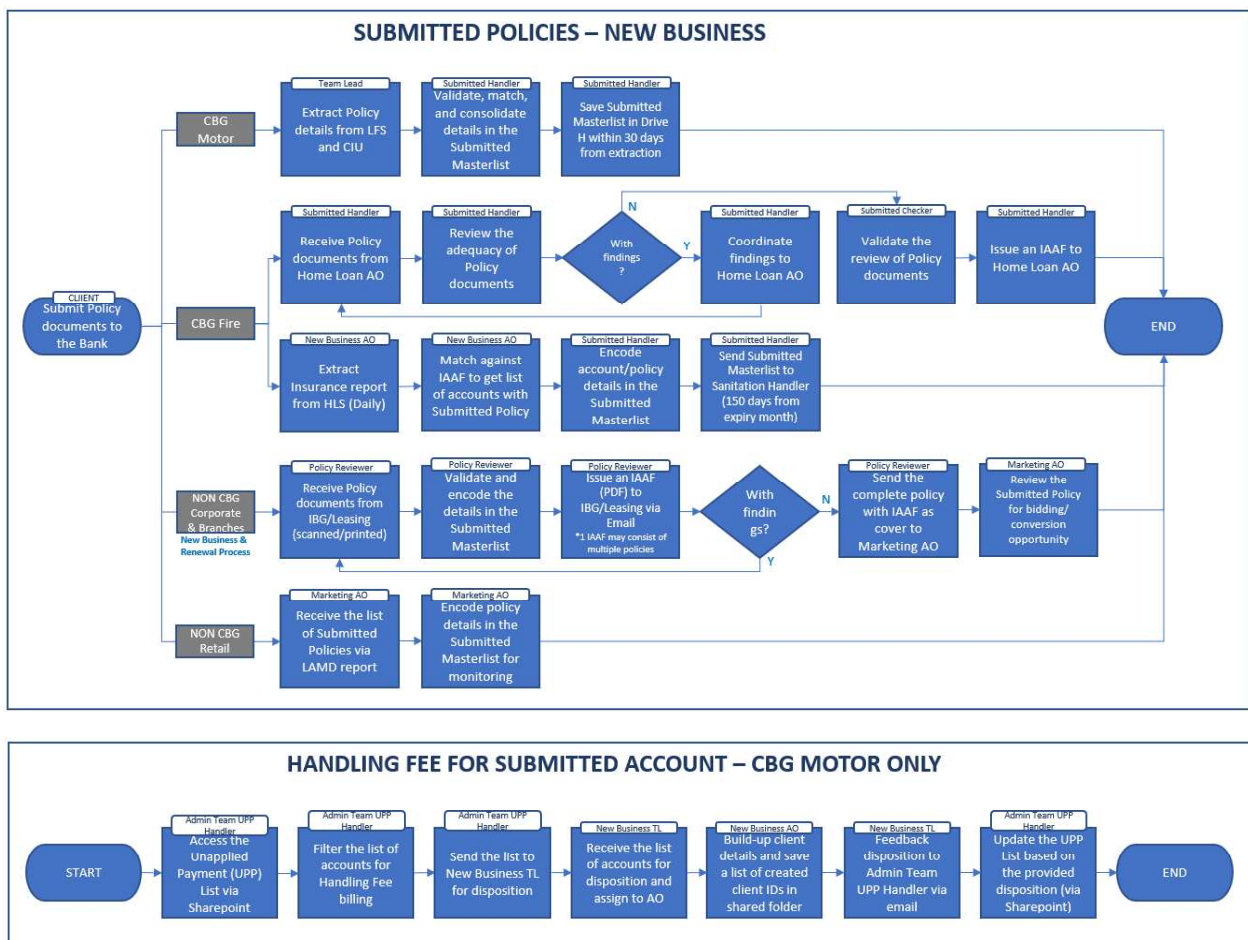

b. Benefits (Optional)

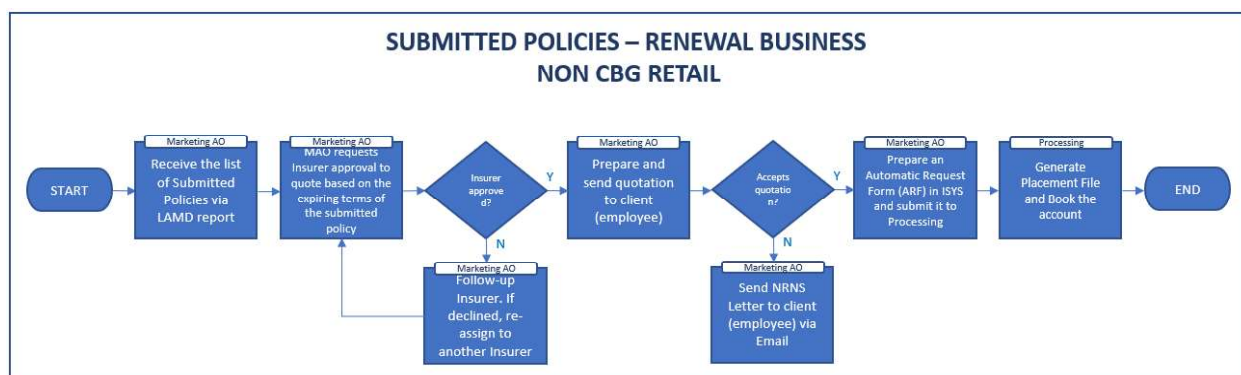

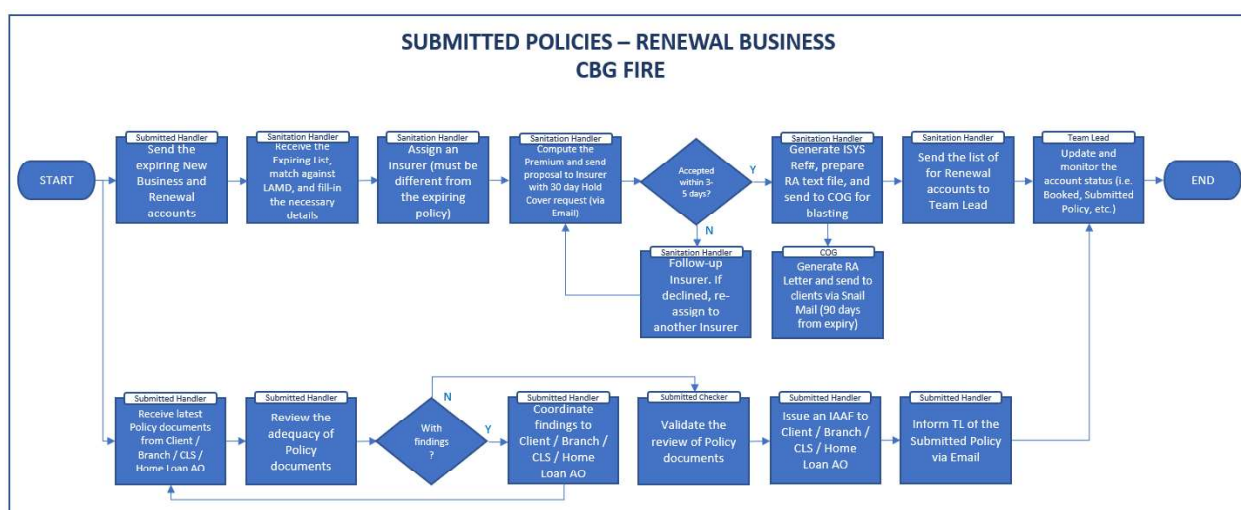

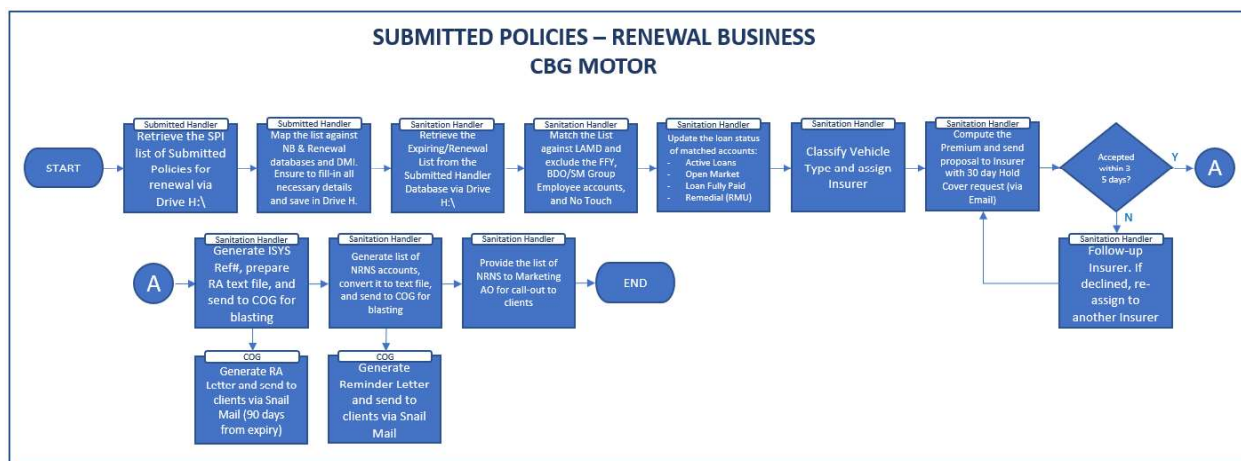

- **Reduced Manual Workload:** Through end-to-end automation of policy intake, validation, classification, renewals, notifications, and payment tagging, the teams can focus on value-adding activities (client engagement, conversion, decision-making) rather than manual reconciliation and spreadsheet tracking.
- **Improved Operational Efficiency:** By replacing fragmented, manual processes with rules-based, system-driven workflows, this initiative accelerates processing, approvals, renewals, and bookings. Therefore, supporting faster turnaround times.
- **Reduced Operational Risk and Rework:** Through consistent application of rules, automated exclusions, and clear audit trails for reviews, approvals, and decisions, this greatly minimize risk for human error and subsequent rework.

• What is the current process? (Before)

Describe the current way of doing things. Include illustration and content as available and applicable:

- Intake of submitted insurance policies across CBG and Non-CBG accounts are received in various forms (i.e. Excel sheets, scanned document, printed document).
- Submitted policies for monitoring are encoded into an Excel format masterlists saved in shared folders.
- Disposition for Handling fees (where applicable) are coordinated via email and updated via Sharepoint file.
- Manual account sanitization and screening (i.e. matching loan status, exclusions, and eligibility).
- End-to-end activities are tracked through shared folders, manual status tagging, and reporting.

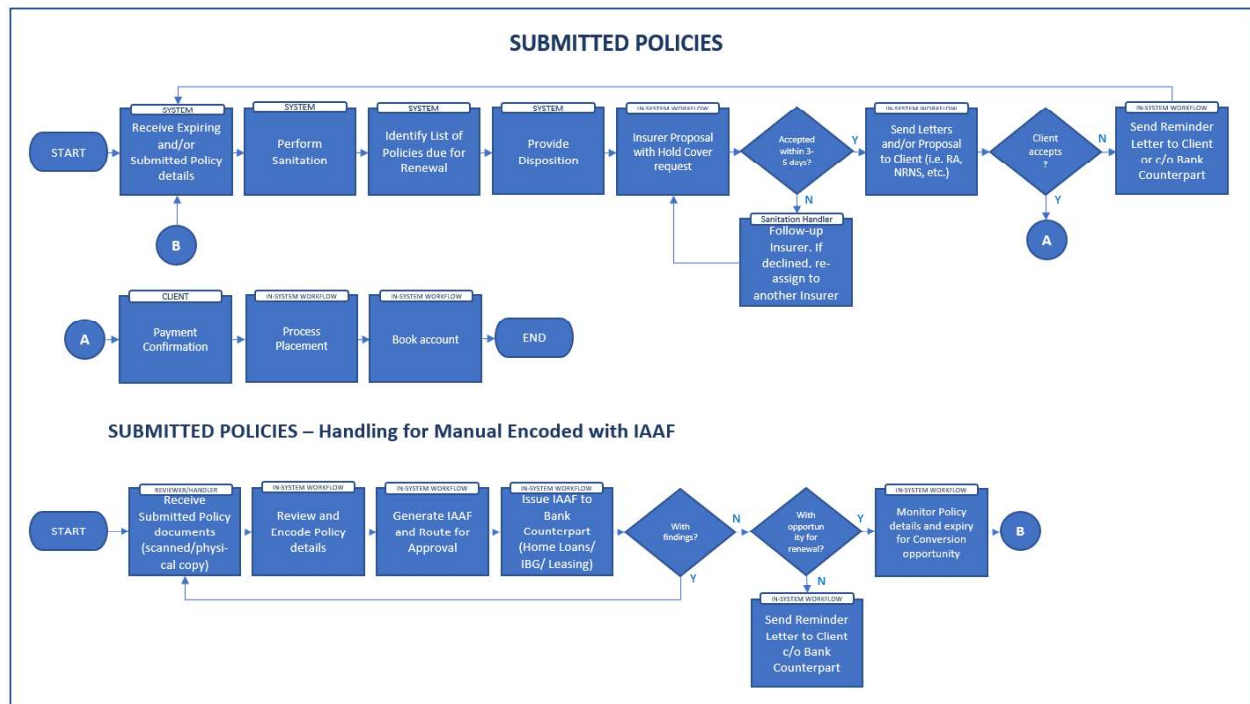

- **Specific Transactions:**
Client submits insurance policy
- **Reports Produced:**
 1. *Submitted Masterlist*
- **Notifications Received:**
 1. *RA Letter*
 2. *NRNS Letter*
 3. *Quotation/Proposal Email*

- **What is the envisioned journey? (After)**

State the desired end state of your process. Describe a new customer and/or employee experience, as applicable.

- Unified intake and centralization of all submitted policy data into a single, master database.
- Automated data extraction, validation, and governance-driven approvals to ensure accuracy, traceability, and compliance.
- Rules-based sanitation, matching, and classification of policies to drive consistent and scalable processing.
- Proactive renewal management, including automatic detection of expiring policies and initiation of renewal actions.
- Intelligent segmentation of accounts to distinguish renewal, manual handling, and non-renewal cases early.
- End-to-end automation of documents and communications (i.e. IAAFs, TORs, RAs, proposals, letters, etc.).
- Exception visibility through automated fallout reporting and monitoring dashboards.
- Reduced manual effort and faster turnaround through system-driven placement, booking, and payment tagging.

- **Specific Transactions:**
 - Client submits insurance policy
- **Reports Produced:**
 1. Submitted Masterlist
 2. Sanitation, Matching, Disposition, and Classification Reports
 3. Renewal and Placement Reports
 4. Fallout and Exception Reports
- **Notifications Received:**
 1. Notification of new policy submissions or required manual validation
 2. Alerts for pending IAAF or TOR approvals
 3. Alerts when policies are moved to renewal, manual, or non-renewal buckets.
 4. Notifications of exception or fallout cases requiring attention.
 5. Alerts for policies nearing expiry and renewal initiation.
 6. Notification to Account Officers when TORs are approved.
 7. Alerts when placement files are ready or successfully transmitted.
 8. RA letters, renewal notices, proposals, and reminder letters.
 9. NRNS notifications for non-renewal or declined cases.
 10. Alerts for Hold Cover of unbooked accounts

Note: Ensure to include the appropriate envisioned journey based on the expectation from your end customers (i.e. preferred channels, Market surveys, research, feedback, et al) so that succeeding activities including solution design will be crafted accordingly. Any detailed solution level process diagram will be documented at a later stage using succeeding IT related documents.

• Table of Business Requirements

State business outcomes / capabilities (e.g. Customer Data Capture, Statement Regeneration, Real time Notification, Marketing and Analytics, Operational and Financial Reporting) required by business for this request. Provide the business requirement of each key capability required in the table below. Map the key capabilities to the business requirements by matching their BRID (ex: Key capability 1 should match with all BRID1.#)

Business Key Capabilities:

1. Ensure that all policy submissions from defined and approved sources are captured in the system, in accordance with prescribed submission formats.
2. Maintain a single source of truth for all submitted policies with controlled access.
3. Support governance-driven policy reviews with full traceability.
4. Enable configurable and rule-driven processing.
5. Automated workflow triggering; Exception handling and fallout reporting.
6. Apply accurate classifications to drive correct renewal and disposition decisions.
7. Detect limit breaches and enforce insurer approval processes.
8. Provide visibility into operations, exceptions, and outcomes.
9. Policy expiry detection; Automated renewal initiation; Auto-sending of proposals and letters
10. Renewal candidate extraction; Placement file processing; Booking confirmation
11. System-generated alerts and notifications

Business Requirements					
Process / Capability #	BR ID	Persona	Requirement / User story	Expected Result / Acceptance Criteria	Priority Level
1	BRIDSP-01	As a User	I must be able to upload the submitted policies (i.e. Excel, CVS, ODS, PDF, etc.) into the system.	Given a submitted policy is available, when the policy details are uploaded to the system, then the system successfully accepts the uploaded data for further processing.	Must Have
1, 4, 6	BRIDSP-02	As a System	I must be capable of receiving uploaded loan files (i.e LAMD, LMS, etc.) and automatically match them against submitted policies So that accounts can be accurately categorized without manual intervention.	Given loan files (i.e LAMD, LMS, etc.) are received by the system, when the files are processed through the automated workflow, then the files are processed without manual intervention, policies are accurately matched, and accounts are correctly categorized; and any unmatched or exception records are clearly identified for manual disposition in the system; and the end-to-end processing is traceable, auditable, and consistent. <u>Acceptance Criteria:</u> Given the system is available and configured to accept loan files (i.e. LAMD, LMS, etc.), when the files are received by the system, then the system successfully receives the files; And when the loans files are processed, then the system automatically matches the records against submitted policy data using defined criteria (i.e. PN Number, Loan application Number, etc.); And when records are successfully matched, then the corresponding accounts are automatically categorized based on defined business rules;	Must Have

				And when records cannot be matched, then the system identifies and flags them for review or exception handling; And then for all processed records, the system logs complete processing results with a full audit trail, including file source, timestamp, matching outcome, and categorization.	
8	BRIDSP-03	As a Marketing User	I must be capable of generating and providing a report of all expiring accounts for a given month and a list of active loan accounts without an active policy.	Given policy and loan data are available within the system, when a reporting month is specified, then the system generates a report of all accounts with expiring policies for that month. Given active loan account data is available, when the report for such is generated, then the system includes a list of active loan accounts without an active insurance policy.	Must Have
1	BRIDSP-04	As a System	I must extract policy details from uploaded policy documents and present them for user confirmation so that only validated data is stored.	Given a policy document is uploaded, when data is extracted and shown for validation, then data is saved only after user confirmation.	Must Have (Release 2)
1	BRIDSP-05	As a Marketing User	I want to manually create or update policy details and tag accounts or policies as (i.e. renewable, non-renewable) so that policies with incomplete or non-extractable data are still recorded and renewal opportunities can be clearly identified and acted upon.	Given a policy requires manual entry, when details are encoded, then the policy is saved successfully. Given an existing account or policy record is under defined segment (i.e. NON CBG Corporate), when I select or update the renewal opportunity tag (Renewable / Non-Renewable), then the system saves the selected tag and displays it clearly on the account/policy record. And then the tag is available for reporting and filtering.	Must Have
2	BRIDSP-06	As a System	I must be capable of storing all submitted policy details and allowing viewing, updating, and extraction per market segment.	Given submitted policy details are received by the system, when the policy details are stored, then the system stores the submitted policy details and allow viewing, updating and extraction per market segment.	Must Have
3	BRIDSP-07	As a Marketing User	I want to be able to generate one IAAF (Insurance Adequacy Assessment Form) per policy with the ability to link it to related policy reviews so that reviews are traceable.	Given a policy exists, when IAAF is generated, then only one IAAF is created. Given that there is a related policy, then the IAAF may be linked to the related policy via unique reference number (sample format sequence: Region Code-Year-Counter).	Must Have
3	BRIDSP-08	As a System	I must store and display remarks and review dates per policy review within the IAAF so that changes and review history are tracked.	Given a policy review is completed, when remarks and dates are recorded, then the IAAF reflects review history and review count.	Must Have
3	BRIDSP-09	As a System	I must route the IAAF for approval and signature based on the predefined IAAF Approval Matrix and criteria so that governance is enforced.	Given approval conditions are met, when routing is triggered, then the IAAF is routed to the correct approver.	Must Have
4	BRIDSP-10	As a Marketing User	I want to define matching, sanitation, and account classification criteria so that processing rules are configurable.	Given sets of criteria are defined, when a process is triggered, then rules are applied consistently.	Must Have
5	BRIDSP-11	As a System	I must process uploaded/extracted documents that trigger downstream workflows (i.e. sanitation, matching, disposition, and/or account classification) so that business processes are executed automatically.	Given documents are uploaded, when document processing occurs, then the appropriate business workflow is triggered. <u>Acceptance Criteria:</u> Given appropriate business workflow is triggered, when needed, then an account tagging is executed depending on the defined criteria	Must Have

5	BRIDSP-12	As a System	I must generate a fallout report after document processing so that exceptions and failed records are clearly identified.	Given document processing is completed, when errors or exceptions occur, then a fallout report is generated.	Must Have
6	BRIDSP-13	As a System	I must identify whether an account or policy is Inforced or Submitted so that I can apply the correct renewal and disposition rules.	Given documents are loaded into the system, when the policy details are evaluated, then the system correctly classifies it as Inforced or Submitted.	Must have
6	BRIDSP-14	As a System	I must be able to identify Submitted Policies (i.e. with Matched PN vs Loan reports i.e. LAMD, LMS, LAD) into qualification buckets so that the correct renewal action is applied.	Given policies are submitted, when qualification criteria are assessed, then policies are classified into appropriate qualification buckets (i.e. For Renewal, For Manual Disposition, Non-Renewal, No Touch, FFY, BDO/SM Group Employee Accounts, or RMU buckets), and then applied to the correct renewal action and trigger the next workflow.	Must have
6	BRIDSP-15	As a System	I must identify Active Loan per Load reports (i.e. LAMD – Non-Amortized accounts) so that the appropriate RA template can be generated.	Given an active loan exists, when the loan is non-amortized, then the system marks it as ready for generation of Generic RA or FFY RA template. And then next workflow must be triggered.	Must have
6	BRIDSP-16	As a System	I must automatically assign policies to Non-Renewal buckets (i.e. Free First Year, SM Group Employee, No-Touch, CARL, Bonds, RMU) so that they are excluded from renewal actions.	Given policies meet non-renewal criteria, when bucket rules are applied, then policies are tagged as Non-Renewal and then it is recorded in a fallout report with exclusion reason.	Must have
6	BRIDSP-17	As a System	I must group Inforced Policies with Unmatched PN vs Loan reports (i.e. LAMD) into qualified buckets (i.e. Fully Paid Loan, OPM, BDOFC, Sold) so that required RAs and Proposals can be created.	Given a policy is inforced, when classification rules are applied, then the policy is placed in the correct bucket. Given an inforced policy is eligible, when document creation is triggered, then RA and Proposal are successfully generated.	Must have
4, 8	BRIDSP-18	As a Marketing User	I want to be able to create an individual or batch insurance proposal using nominated rates for packages with ability to manually input/edit nominated packages rates that can be applied to single or multiple accounts (i.e. by vehicle classification and/or insurer).	Given submitted policy data and nominated package rates are available within the system, when proposal creation is initiated (either individual or batch), then the system creates an insurance proposal using the applied nominated rates. Given the user has the ability to manually input/edit the rates, when the user applies the rates to single or multiple accounts (i.e. by vehicle classification and/or insurer), then the rates are correctly mapped to the selected account(s) based on vehicle classification and/or insurer; and then the system generates insurance proposals using the edited rates. Given a submitted proposal is created, when the proposal is generated, then the proposal is available for review or further processing.	Must have
4, 8	BRIDSP-19	As a Marketing User	I want to be able to assign a proposal or a batch of proposals to a preferred accredited insurer upon creation of proposal.	Given a submitted proposal is available in the system, when a preferred accredited insurer is selected for the proposal, then the system assigns the selected insurer to the specific submitted proposal. Given multiple submitted proposals are available, when a preferred accredited insurer is selected for batch assignment, then the system assigns the selected insurer to all selected submitted proposals.	Must have
7	BRIDSP-20	As a System	I must detect accounts exceeding acceptance or coverage limits so that insurer approval can be required.	Given an account is evaluated, when coverage or acceptance limits are exceeded, then the account is flagged for insurer approval.	Must have

7	BRIDSP-21	As a Marketing User	I want to generate a Terms of Reference (TOR) for accounts that exceed acceptance or coverage limits so that approval can be obtained.	Given an account exceeds limits, when TOR generation is triggered, then a TOR document is created for that account.	Must have
7	BRIDSP-22	As a System	I must route the TOR for approval and signature based on the TSU Approval Matrix and criteria so that governance rules are followed.	Given a TOR is generated, when routing rules are applied, then the TOR is sent to the correct approver(s) for signature.	Must have
7	BRIDSP-23	As an Account Officer	I want to receive and/or be notified of the approved TOR so that I can proceed with renewal processing and Insurer engagement.	Given a TOR is approved, when approval is completed, then the TOR is handed over to the assigned Account Officer. And then the assigned AO can view or download the document.	Must have
8	BRIDSP-24	As a Marketing User	I want to be able to generate reports so that business processing results (i.e. Sanitation, Disposition, Account Classification, etc.) can be monitored.	Given business processes are completed, when report is requested, then the correct report is generated. Given exceptions in business processes occur, then a fallout report can be generated.	Must Have
8	BRIDSP-25	As a System	I must support viewing, downloading, and printing of reports in multiple formats (i.e. Excel, PDF, etc.) so that reporting is flexible.	Given a report exists, when a format and action are selected, then the report is rendered correctly in the chosen format.	Must Have
9	BRIDSP-26	As a System	I must automatically send letters (i.e. Reminder letter, RA Letter, etc.) or proposals when defined criteria are met so that manual intervention is minimized.	Given sending criteria are satisfied, when policy evaluation occurs, then letters or proposals are automatically sent.	Must Have
9	BRIDSP-27	As a System	I must detect expiring policies and initiate renewal processing so that policy continuity is maintained.	Given a policy is nearing expiration, when renewal conditions are met, then renewal processing is initiated.	Must Have
11	BRIDSP-28	As a System	I must automatically generate and send notifications for key policy lifecycle events and exceptions with the ability to define recipients so that recipients are informed and can take timely action without manual follow-ups.	Given a policy event occurs (i.e. submission, validation, pending approval/approved, classification change, exception, expiry, placement, renewal decision, etc.), when the system evaluates notification rules and thresholds, then the system sends the appropriate notification to the intended/assigned recipients, including but not limited to the following events: • New policy submission or required manual validation • Pending IAAF or TOR approvals • Movement to renewal, manual, or non-renewal buckets • Exception or fallout cases (nice to have) • Policies nearing expiry and renewal initiation • TOR hand-over to Account Officers • Placement file readiness or successful transmission • RA letters, SFU letters (for CBG accounts only), NAL, renewal notices, proposals, and reminders • NRNS notifications for declined or non-renewal cases • Alerts for Hold Cover of unbooked accounts	Must Have
10	BRIDSP-29	As a Marketing User	I want to receive the list of accounts/policies subject for renewal so that they can be prepared for call-out and placement activities.	Given the renewal cycle is initiated, when the system extracts eligible records, then a complete list of renewable accounts/policies is generated.	Must have

10	BRIDSP-30	As a Placement User	I want to process placement files so that policies can be placed efficiently.	Given client confirmation to renew with BDOI, when I trigger the placement process, then a Placement file should be transmitted successfully to Insurer.	Must Have
2	BRIDSP-31	As a Booking User	I want to book the account so that the policy lifecycle is completed.	Given placement is successful, when I tag an account/policy as booked, then the successfully booked status should be reflected in the Submitted Masterlist.	Must Have
2	BRIDSP-32	As a User	I want to view and extract the Submitted Masterlist based on my role so that data access is controlled.	Given the availability of the masterlist, when data is viewed or downloaded, then role-based access rules are applied.	Must Have
2	BRIDSP-33	As a Marketing User	I want to monitor updates to handler, conversion status, and remarks in the Submitted Masterlist so that policy tracking remains accurate.	Given updates are made in the masterlist, when changes are saved, then the masterlist reflects latest handler, conversion status, and remarks.	Must Have
4	BRIDSP-34	As a System	I must identify and automatically tag Handling Fee payments in the Unapplied Payment List using the PN Number for payments made via CLPC and the Location Reference Number for payments made via OTC, so that handling fee payments are correctly classified and ready for downstream processing without manual intervention.	Given unpaid transactions exist in the Unapplied Payment List, when a payment contains a valid PN Number (CLPC) or Location Reference Number (OTC) that matches a Handling Fee record, then the System automatically tags the payment as Handling Fee. And then tagged payment is updated with the correct classification status and is available for reporting, audit, and application.	Must Have
4	BRIDSP-35	As a Marketing User	I want to be able to update assigned Insurer even those with an ongoing Hold Cover request.	Given there is an existing Hold Cover, when updates to Insurer are saved, then changes are reflected accordingly. And then a Hold Cover request is sent to the newly assigned Insurer.	Must Have
1	BRIDSP-36	As a System	I must have the capability to migrate existing submitted masterlists that are in Excel format so that historical masterlist data is preserved, standardized, and available in the new solution.	Given existing submitted masterlists are available in Excel format (e.g., .xlsx), when the system executes the Excel migration process, then the system successfully reads and processes the Excel files, And all valid masterlist records are migrated into the target system with complete and accurate data, And migrated masterlists retain their original submission status and key metadata (e.g., submission date, reference ID), And any invalid, incomplete, or failed records are captured in an error log with clear reason codes.	Must Have

Usage Requirements

Complete the tables where applicable. If a table is not relevant to your request, indicate “Not Applicable”.

Note: For any data extract requirements, please collaborate with your IT partner for assistance.

Volume and Performance						
<i>Describes how the system needs to operate in terms of capacity and efficiency.</i>						
User Role	Business Process	User Count		Projected Transaction Volume	Projected Annual Volume Growth Rate (%)	Expected Response Time
		Max	Concurrent			
<i>Type of User</i> <i>“Who is using the system?”</i>	<i>User Activity</i> <i>What the user does in the system to accomplish a business task</i>	<i>Number of Users</i> <i>How many people will use the system?</i>		<i>This refers to how many actions or transactions people are expected to do in the system and how quickly the system should respond when they do them</i>	<i>How much the system’s stored data will increase each year</i>	<i>How quickly the system reacts when a user clicks or requests something</i>
CBG Admin/Mktg	Login	30	15	22,000 logins/yr	5%	2 seconds
CBG Admin/Mktg	Sanitation	30	15	63,000 logins/yr	25%	2 seconds
Non-CBG Corporate Policy Review officer	Login	8	6	2,000 logins/yr	5%	2 seconds
Non-CBG Corporate Policy Review officer	Policy Review	8	6	2,000 logins/yr	5%	2 seconds
Questions			Response			
When is the highest system demand expected (e.g., year-end)?			End of month/year- end			
When are peak times for usage (e.g., 12:00 - 14:00 daily)?			08:00 AM to 06:00 PM daily			
Do mobile and desktop end users expect different levels of speed and performance?			NA			

Availability	
<i>Refers to the uptime of system reliability, specifying how often the system/service should be operational and accessible for users.</i>	
Questions	Response
What is the acceptable system availability (e.g., 99.9%)?	99.9% uptime.
When do people use the system (e.g., 9am-6pm daily, 24/7)?	During business hours.
How long can the system be down each month or year without causing issues?	No more than 45 minutes per month (planned maintenance only). *Downtime depends per application; IT will further assess based on BU's requirement.
What times are acceptable for system maintenance?	Late night hours (e.g., 12:00 AM – 4:00 AM) when usage is lowest.
In the event of a major disaster, what is the threshold of your business continuity plan relevant to this requirement?	System should be restored within 4 hours for critical services; full recovery within 24 hours.

Data Retention & Archiving					
<i>Refer to how long data is stored, how it is managed overtime, and when it is moved to long-term storage or deleted, based on the business needs and legal/compliance requirements.</i>					
Data	Retention Period (Data-In-Use / Online)	Archival Period (Data-at-Rest / Offline)	Backup Frequency	Accessibility	Backup Retention Period
Transaction Records / Submitted Policy records	5 years	5 years	Daily	Accessible Daily	5 years
Questions	Response				
Should certain data be anonymized over a particular period?	No.				

Note: Refer to relevant bank policies for data retention and archiving.

Approval
