Bcc Zean C. Ibay <ibay.zean@bdo.com.ph>

Dear Team,
Thank you for attending the discussion.

We have completed the discussion on the Claims Business Requirements Document (BRD). All clarifications raised during the session have been documented in the minutes of the meeting. These clarifications do not require any addendum to the BRD. Thank you for your participation and valuable input.

Minutes of the Meeting

- Reviewed and consolidated additional claims requirements and clarifications from the March business requirement gap discovery workshop.
- Discussed seven to eight new or clarified business requirements (BR 37–43) for claims processing, focusing on operational and practical needs not fully covered in the original documentation.
- Clarified that associating multiple insured locations to a single claim applies mainly to non-motor products, with specific scenarios discussed for property and marine cargo.
- Agreed that claims data by location will be available via on-demand reports, with dashboards as a potential future enhancement.
- Confirmed that claims validation must use the latest policy endorsement or cover version, with visibility of historical changes.
- Established that marketing users will have controlled, role-based access to loss information through existing reports, with no new reports required.
- Determined that claims users will manually record insurer updates in the system, as direct insurer access or integration is not in scope for initial implementation.
- Agreed on the need to align internal and insurer location references, with both visible and auditable in the claims module; ownership of location maintenance to be clarified.
- Confirmed the system must support multiple insurer claim numbers under a single claim incident, especially for co-insurance scenarios, with clear linkage and reporting.
- Noted that payment fulfillment methods (settlement check, fund transfer, LOA) depend on product type.
- Parked future enhancements (e.g., direct insurer integration, dashboards) for later consideration.

Business Requirement (BR) ID Discussion

BR 37: Multiple Insured Locations per Claim

- The system must allow associating multiple insured locations to a single claim for accurate tracking of incidents affecting more than one site.
- Only locations listed in the policy or cover can be selected.
- This requirement mainly applies to non-motor products (e.g., property, marine cargo), as motor claims are typically tied to the insured unit, not location.
- Discussion clarified that the grouping is per client and per risk, and the system should prevent mismatches between policy and claim locations

BR 38: Identify Claims by Location for Loss Pattern Analysis

- Users must be able to identify claims by location to analyze recurring risks and loss patterns.
- The current agreement is to provide this via on-demand reports, with dashboards considered a future enhancement.
- Reports should help identify areas with frequent or recurring losses for monitoring and underwriting support.

BR 39: Validate Claims Against Latest Policy Endorsement/Version

- Claims validation must always use the latest policy endorsement or cover version.
- The claim record should display the cover number and version, and indicate if a newer version exists.
- Policy data is view-only for claims users, ensuring visibility of historical changes for accurate validation.

BR 40: Controlled Marketing Access to Loss Information

- Marketing users need controlled, read-only access to loss information to support renewal pricing and client discussions.
- Access is role-based, using existing reports (e.g., loss experience, loss ratio, claims aging).
- No new reports are required; extraction and download are permitted as per permissions.

BR 41: Centralized and Auditable Capture of Insured Claims Updates

- The system must record and audit all claims reported or updated by insurers, including date, source, and remarks.
- Insurers do not access the system directly; claims users manually input correspondence from insurers (e.g., via email or call).
- Integration with external insurer systems is not in scope for day one but may be considered in the future.

BR 42: Align Internal and Insurer Location References

- The system must allow mapping of internal insured locations to insurer-recognized references for consistent claims reporting and coordination.
- Both internal and insurer location references should be visible and auditable in the claims module.
- Maintenance of location lists should align with policy and renewal processes, with ownership to be clarified between business and IT.

BR 43: Manage Multiple Insurer Claim Numbers per Incident

- The system must support recording multiple insurer claim numbers under a single claim incident, especially for cases with multiple insurers (e.g., property with co-insurance).
- Each insurer claim number is linked to the corresponding insurer, and all are visible and reportable within the claim record.
- Duplicate claim numbers for the same insurer are not allowed, grouping is per client and per risk code.

Other Key Points

- Payment fulfillment for claims may be via settlement check, fund transfer, or LOA, depending on the product type.
- Ownership and maintenance of location lists and LOVAs (list of values) require further clarification between business and IT.
- Future enhancements (e.g., direct insurer integration, dashboards) are parked for later consideration.

Meeting Notes, Generated by AI. Be sure to check for accuracy.

- Consolidation of Additional Claims Requirements:** Zean led the meeting with the Claims SMEs, System Analyst IT Group, and Solid Arc to review and consolidate new claims requirements and clarifications identified during the March business requirement gap discovery workshop, ensuring all practical and operational needs are explicitly documented for solution implementation.
 - Purpose of Addendum:** Zean explained that the addendum supplements the original claims BRD by capturing new and updated requirements identified during the March workshop, aiming to close gaps and clarify operational needs not fully covered in the initial documentation.
 - Scope and Focus Areas:** The team discussed that the addendum focuses on enhanced handling of claims with multiple insured locations, improved analysis of claims-prone areas, validation against the latest policy endorsements, controlled marketing access to loss data, centralized capture of insurer-reported claims, and alignment of internal and insurer location references.
 - Documentation and Traceability:** It was clarified that the addendum does not change the project scope but provides necessary detail for accurate system design, risk reduction, and ensures traceability and compliance with eSDLC guidelines.
- Requirement 37: Multiple Insured Locations per Claim:** Zean, Wynonah, Lester, Richard, Rhea, and others discussed the requirement for associating multiple insured locations to a single claim, clarifying its applicability to non-motor products and the need for explicit documentation of scenarios and acceptance criteria.
 - Requirement Description and Acceptance Criteria:** The requirement mandates that the system must allow selection and association of multiple insured locations to a single claim, with each location viewable within the claim record and all locations selected from the policy or cover location list.
 - Applicability to Product Types:** Lester and Richard clarified that this requirement is primarily for non-motor products, as motor claims are typically tied to the insured unit rather than location, while marine cargo and property policies may involve multiple locations.
 - Scenario Clarification:** Wynonah raised scenarios where the risk location in the policy differs from the claim, and Zean and Richard confirmed that the claim location must match the policy, and the system should not allow claims for locations not covered by the policy.
- Requirement 38: Identification and Analysis of Claims-Prone Locations:** Zean, Wynonah, and Lorna discussed the need for the system to support identification and analysis of claims-prone locations using historical data, with reporting as the agreed initial format and dashboarding as a future consideration.
 - Requirement and Expected Results:** The system must enable users to identify claims-prone locations or areas by supporting claims viewing by location and allowing analysis of loss patterns and recurring risks using historical claims data.
 - Reporting Format:** The group agreed that the initial implementation will use report formats for claims data by location, with dashboard capabilities considered optional or for future enhancement.
 - On-Demand Reporting:** Zean confirmed that claims reporting is on-demand, allowing users to extract data as needed for analysis and underwriting support.
- Requirement 39: Validation Against Latest Policy Endorsement:** Zean and the team discussed the requirement for claims validation to be based on the latest policy endorsement or cover version, ensuring claims users have visibility of the most current policy terms and historical changes.
 - Requirement Details:** The system must display the cover number and version used for each claim and indicate if a newer endorsement or version exists, with policy data set as view-only for claims users.
 - Business Need:** The business unit requires the ability to validate claims against the most current policy or endorsement, including visibility into historical policy changes due to endorsements, renewals, or amendments.
- Requirement 40: Controlled Marketing Access to Loss Information:** Zean, Wynonah, Richard, Rhea, and others discussed providing marketing users with controlled, role-based access to loss information to support renewal pricing, and client discussions, using existing claims reports without the need for new report types.
 - Requirement and Access Control:** Marketing users must have controlled, read-only access to loss experience data via existing claims reports, with extraction and download permissions governed by role-based access.
 - Report Types and Usage:** The team confirmed that marketing will use standard reports such as the Claims Aging report, and no new reports are required for this purpose.
- Impact on Pricing and Renewals:** The loss information accessed by marketing will support renewal pricing and client negotiations by providing visibility into client-level claims and loss ratios.
- Requirement 41: Centralized and Auditable Capture of Insurer-Reported Claims:** Zean, Wynonah, Richard, and others discussed the need for the system to centrally record and audit insurer-reported claims and updates, clarifying that claims users will manually input correspondence from insurers, as direct insurer access is not planned for day one.
 - Requirement and Process:** The system must allow recording of insurer claim references, capturing the date, source, and remarks for each update, with all updates forming part of the claim history and audit trail.
 - Manual Input by Claims Users:** It was clarified that insurers will not have direct system access; instead, claims users will manually input information received from insurers via email, phone, or documents.
 - Future Integration Considerations:** The team acknowledged that direct integration or external portals for insurer input could be considered in the future, but are not part of the initial implementation.
- Requirement 42: Alignment of Internal and Insurer Location References:** Zean, Wynonah, Richard, Earl, and others discussed aligning internal insured location references with insurer-recognized location references to ensure consistency in claims reporting and coordination, including system support for capturing and mapping these references.
 - Requirement and Acceptance Criteria:** The system must allow capturing insurer-provided location references per insured location, with both internal and insurer references viewable in claims and auditable mapping between them.
 - Location Maintenance and Clarification:** The team discussed the need to identify the internal list of values for locations should match policy and claims modules, and clarified the need to identify the process owner for maintaining location data.
 - User Interface Considerations:** Earl from UXD suggested options for drop-downs or free-text fields for location selection, with the final approach dependent on maintenance and ownership decisions.
- Requirement 43: Management of Multiple Insurer Claim Numbers per Incident:** Zean, Wynonah, Richard, and others discussed the requirement for recording and managing multiple insurer claim numbers under a single claim incident, ensuring accurate tracking, reconciliation, and reporting for incidents involving multiple insurers.
 - Requirement and Acceptance Criteria:** The system must support associating multiple insurer-specific claim numbers to a single claim incident, with each number linked to the corresponding insurer and all visible within the claim record.
 - Business Scenarios:** Richard and Wynonah explained scenarios such as a client with multiple insurers for a property, where each insurer issues their own claim number for the same incident, and the system must consolidate these under one claim record.
 - Product Applicability:** The requirement is mainly relevant for property and non-motor claims, where a single incident may involve 15 to 20 insurers, each with their own claim number, and the system must prevent duplicate claim numbers for the same insurer.
- Claims Fulfillment and Payment Methods:** Lester, Richard, and Zean briefly discussed claims fulfillment and payment methods, confirming that payments are made via settlement check or fund transfer for non-motor claims, and via LOA or cash settlement for motor claims.
 - Payment Methods:** Claims payments are processed via settlement check or fund transfer for non-motor claims, while motor claims are typically settled via LOA, with occasional cash settlements.

Follow-up tasks:

- Location List Maintenance Ownership:** Clarify and assign the process owner responsible for maintaining the list of insured locations to ensure alignment between claims, policy, new business, and renewal modules. (Zean, Wynonah, Richard)
- System for Location Selection:** Determine and finalize the appropriate user interface (e.g., dropdown, combo box, free text) for claims users to select or input affected locations, considering internal and insurer references. (Earl, Zean, Wynonah)
- External Insurer Integration Feasibility:** Evaluate the feasibility and requirements for integrating external insurer portals or systems to allow direct insurer input of claim details, and decide if this will be included in future phases. (Zean, Richard)

CLAIMS– ADDENDUM (Workshop)
Business Requirements Document (BRD)
Prepared by: Business Project Services (BPS)

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
4/08/2026	1.0	Addendum to capture additional Claims requirements identified during the Business Requirement Gap Discovery Workshop	Zean C. Ibay

Addendum¹: Business Requirements for Claims

Purpose

The purpose of this Business Requirements Document (BRD) Addendum is to formally document and capture the new and updated business requirements identified during the requirements workshop conducted from March 19 to March 27, 2026. This addendum supplements the originally approved BRD and reflects refinements, clarifications, and additional requirements gathered through stakeholder discussions during the workshop.

This BRD Addendum also aims to evaluate the completeness and alignment of the newly captured requirements against the initially identified requirements, with the objective of identifying any gaps, inconsistencies, or unmet business needs. This addendum supports informed decision-making and ensures that all critical business objectives and requirements are adequately addressed.

Ultimately, this addendum serves as an extension of the original BRD and acts as a reference document to maintain requirement traceability, manage scope changes, and support subsequent phases of solution design, development, and implementation.

This BRD Addendum consolidates additional Claims requirements and clarifications identified during the Business Requirement Gap Discovery Workshop. A detailed review confirmed that while the core Claims processing lifecycle is already well-covered in the approved Claims BRD, several practical and operational requirements raised by Business Units required explicit documentation to avoid ambiguity during solution implementation.

Key focus areas addressed by this addendum include:

- Enhanced handling of claims involving multiple insured locations
- Improved visibility and analysis of claims-prone locations and loss patterns
- Assurance that claims validation is consistently based on the latest policy endorsements or cover versions
- Controlled access to loss information for Marketing users to support renewal and pricing discussions
- Centralized and auditable capture of insurer-reported claims and updates
- Alignment between internal insured location references and insurer-recognized locations to ensure consistency in reporting and coordination

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

These requirements were discussed during the workshop and were assessed as either not explicitly stated or only partially covered in the original Claims BRD. As such, they are documented in this addendum to close identified gaps while maintaining the integrity of the approved scope

This addendum does not introduce a change in project scope, nor does it invalidate previously approved requirements. Instead, it provides the necessary level of detail to support accurate system design, reduce implementation risk, and ensure that business objectives related to Claims visibility, traceability, and data consistency are fully addressed.

Table of New Business Requirements

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLM.037		Claims User	I must be able to select and associate multiple insured locations to a single claim, so that claims affecting more than one site are accurately recorded and tracked.	Expected Result: 1. Claims can reference more than one insured location under the same claim record. Acceptance Criteria: 1. System allows selection of multiple locations per claim. 2. Locations must be selected from the policy/cover location list. 3. Each linked location is viewable within the claim record. 4. Claim remains a single reference regardless of number of locations.	Must have.
BRCLM.038		Claims / Risk User	I must be able to identify claims-prone locations or areas, so that loss patterns and recurring risks can be analyzed.	Expected Result: 1. Claims-prone areas are identifiable using historical claims data. Acceptance Criteria: 1. System supports viewing claims by location. 2. Users can identify locations with frequent or recurring claims. 3. Capability builds on existing claims and loss reports.	Must have.
BRCLM.039		Claims User	I must be able to view the latest policy endorsement or cover version applicable to a claim, so that claims validation is based on the most current policy terms.	Expected Result: 1. Claims users can validate claims using the latest policy information. Acceptance Criteria: 1. Claim record displays the cover number and version used.	Must have.

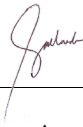

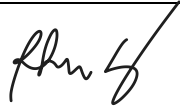

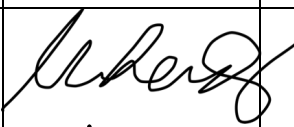

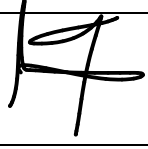

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
				2. System indicates if a newer endorsement/version exists. 3. Policy data is view-only for Claims users.	
BRCLM.040		Marketing User	I must be able to view loss information related to accounts and policies, so that losses can support renewal, pricing, and client discussions.	Expected Result: 1. Marketing has controlled access to loss information. Acceptance Criteria: 1. Marketing users can view loss experience data via existing claims reports. 2. Reports can be extracted / downloaded as per role-based permissions.	Must have.
BRCLM.041		Claims User	I must be able to capture claims reported or updated by insurers, so that insurer communications are centrally recorded and auditable.	Expected Result: 1. Insurer-reported claims and updates are recorded in the system. Acceptance Criteria: 1. System allows recording of insurer claim references. 2. Each insurer updates captures date, source, and remarks. 3. Updates form part of the claim history with audit trail.	Must have.
BRCLM.042		Claims User	I must be able to align internal insured locations with insurer-recognized location references, so that claims reporting and insurer coordination are consistent.	Expected Result: 1. Internal and insurer location references are aligned and visible. Acceptance Criteria: 1. System allows capturing insurer-provided location reference per insured location. 2. Both internal and insurer location references are viewable in claims. 3. Location mappings are auditable.	Must have.

BR ID	Source BRD ID	Persona	Requirement	Expected Result/Acceptance Criteria	Priority Level
BRCLM.043		Claims User	I must be able to record and manage multiple insurers claim numbers under a single claim incident so that incidents involving more than one insurer are accurately tracked, reconciled, and reported without creating duplicate claim records. Certain claims involve multiple insurers participating in the same incident, each issuing their own claim number. The system must support capturing and associating these insurer-specific claim numbers under one incident to ensure: • Accurate coordination with insurers • Clear traceability of insurer communications and records • Consistent reporting and reconciliation across all participating insurers	Expected Result: 1. A single claim incident can be associated with one or more insurer claim numbers. 2. Each insurer claim number is clearly linked to the corresponding insurer. 3. The claim incident remains one consolidated record, regardless of the number of insurers claim numbers involved. 4. Users can view, reference, and report on insurer claim numbers without duplicating the claim. Acceptance Criteria: 1. The system allows multiple insurer claim numbers to be recorded under a single claim incident. 2. Each insurer claim number is linked to a specific insurer. 3. The claim incident remains one claim record regardless of the number of insurer claim numbers. 4. All insurer claim numbers are visible within the claim record with the corresponding insurer name. 5. Insurer claim numbers are searchable and reportable. 6. Duplicate insurer claim numbers for the same insurer and claim are not allowed.	Must have.

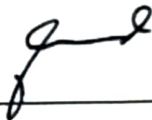

Approval

This document has been approved as the official Business Requirements Document.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

CLAIMS - ADDENDUM

Business Requirements Document (BRD)

Prepared by: Business Project Services (BPS)

Strictly Confidential and for Internal Use of BDO only

Revision Log

<i>Date</i>	<i>Version</i>	<i>Details</i>	<i>Author</i>
12/17/2025	1.0	Addendum to update BRD numbers to avoid duplicate numbering with the other BRDs.	Zean C. Ibay

Addendum¹: Claims

Purpose

The addendum introduces a new set of Business Requirement IDs (BRCLM.001, BRCLM.002, etc.) to replace or supplement the previous IDs (FRID-001, FRID-002, etc.).

This prevents duplication of requirement numbers across different BRDs, which is critical when multiple documents or projects are being managed in parallel. Unique IDs ensure that each requirement can be referenced unambiguously.

¹ As per eSDLC guidelines, any updates to the Business Requirements Document (BRD) after the walkthrough should be managed through controlled documentation to maintain clarity and traceability. Instead of revising and re-routing the entire BRD for approval, an Annex should be prepared to capture the specific changes or additions. This Annex must then be routed for sign-off to ensure formal acknowledgment of the updates. *Alternatively, if the changes or clarifications agreed upon during the walkthrough, the Minutes of Meeting (MOM) can serve as official documentation of those agreements.* This approach streamlines the approval process, reduces redundancy, and ensures that all stakeholders have a clear record of decisions without compromising compliance or governance standards.

Table of Business Requirements

5. Business Requirements (FUNCTIONAL)

BR ID	Previous BRID	Process Component	Activity	Capability/ Requirement
BRCLM.001	FRID-001	Claims	Identifying Unpaid Invoices/Policies	The system must have a functionality to identify unpaid invoices/policies. Claims Authorization Code - should be disabled for unpaid invoices/policies.
BRCLM.002	FRID-002	Claims	Database Management	The system must have the capability to allow User to have the necessary permissions to access the Cover Numbers.
BRCLM.003	FRID-003	Claims	Managing Permissions	The system should provide view access to all Cover Numbers to check the policy coverages. Cover Number and versions are required upon recording a claim.
1BRCLM.004	FRID-004	Claims	Database Management	The system must be able to maintain the Reported Date only.
BRCLM.005	FRID-005	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the status to "Closed".
BRCLM.006	FRID-006	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to override or input the Claimant's Name.
BRCLM.007	FRID-007	Claims	Policy Number Management	The system must be able to get the Policy Number from a source (EBIX) and upload it to the system (Claims).
BRCLM.008	FRID-008	Claims	Policy Number Management	The system must be able to display the Policy Number upon invoicing as it is required by the insurer upon reporting a claim.
BRCLM.009	FRID-009	Claims	Currency and Values Management	The system must have Philippine Peso set as the default value for Currency.
BRCLM.010	FRID-010	Claims	Database Management	The system must be able to maintain values for Claim Status. • For Adjuster's Review and Evaluation • For Claimant's Acceptance of Offer • For Claimant's Submission of Documents • For Insurer's Issuance of Check • For Insurer's Returning of Release Papers • For Insurer's Review and Evaluation • Newly Filed Claim - with complete documents • Newly Filed Claim - without or incomplete documents • Temporary Closed Claim - Non-submission of Documents • Temporary Closed Claim - with Offer

BR ID	Previous BRID	Process Component	Activity	Capability/ Requirement
				• With Adjuster - For Issuance of Settlement Offer • With Assured - For Schedule of Meeting • With BDOI - For Premium Remittance • With BDOI - For Transmittal of Settlement Check • With BDOI - Under Review/Discussion • With Claimant - For Pull-out of Salvaged Items • With Claimant - For Submission of CNR • With Insurer - For Issuance of LOA
BRCLM.011	FRID-011	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the Claim Status.
BRCLM.012	FRID-012	Claims	Status Management	The system must have role/unit-based permissions for selecting Claim Status.
BRCLM.013	FRID-013	Claims	Status Management	The system must allow selection of Claim Status only for specific roles/units.
BRCLM.014	FRID-014	Claims	Database Management	The system must be able to maintain values for Requested Type of Settlement. • Closed – Cancelled • Closed – Denied • Closed - within Deductible • Closed - without Payment • Settled • Settled - Directly Filed • Settled - LOA Issued • Settled - LOA Issued - For Schedule of Repair • Settled - LOA Issued - Vehicle Under Repair • Settled - Signed Release Papers Returned

BRCLM.024	FRID-024	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to amend the Insurer Reserve.
BRCLM.025	FRID-025	Claims	Values Management	The system must have a mechanism to calculate the overall age of claims from the date reported.
BRCLM.026	FRID-026	Claims	Report Generation	The system must be able to generate Claims Aging Report that includes the overall age from the date reported.
BRCLM.027	FRID-027		Values Management	The system must have a mechanism to calculate the age of claims per status.
BRCLM.028	FRID-028	Claims	Report Generation	The system must be able to generate Claims Aging Report aging per status.
BRCLM.029	FRID-029		Report Generation	The system must be able to generate Settled Claims report availability.
BRCLM.030	FRID-030		Report Generation	The system must be able to generate a Loss Experience report.
BRCLM.031	FRID-031	Claims	Report Generation	The system must be able to generate a Outstanding Claims Report.
BRCLM.032	FRID-032	Claims	Report Generation	The system must be able to generate a Loss Ratio Report.
BRCLM.033	FRID-033	Claims	Report Generation	The system must have the capability to allow User to have access to the necessary data and generate needed report or analytics report.
BRCLM.034	FRID-034	Claims	Report Generation	The system must be able to track and report pending actions for claims.
BRCLM.035	FRID-035	Claims	Account Activity Management	The system must be able to tag closures as temporary or permanent.
BRCLM.036	FRID-036	Claims	Database Management	The system must be able to maintain values for catastrophe codes. • Typhoon • Earthquake • Flood • Volcanic Eruption • Landslide • Fire • Others (i.e. Pandemic, El Niño, Terrorism)

Approval

This document has been approved as the official Business Requirements Document Claims.

Upon approval of this document, changes will be permitted until the conclusion of the service definition phase. Any changes made during service definition must be accompanied by a Minutes of the Meeting (MoM) document, signifying the change. Once the service build commences, any further changes will be subject to the project's change management process.

1. Introduction

1.1 Purpose and Scope of the Document

This document defines the business requirements for **MOTOR AND NON-MOTOR CLAIMS LOGGING**.

The Business Requirements Document (BRD) lists the capabilities expected from the solution / service to meet the outcomes of the Business Request (BRQ) approved in the business case. The BRD should be more descriptive than the original BRQ but should not detail how each capability will be built or which system it will be built in unless the detail is critical to the explicitly stated outcome.

This document shall be updated as requirements are further defined and finalized based on discussions, recommendations and feedback from business and technical stakeholders. Unless otherwise stated, all requirements are considered high priority and committed for this phase.

1.2 Intended Audience

INVOLVEMENT	NAME	GROUP
Author	Zean C. Ibay Wynonah Allyssa D. Agojo	OP BPDS IT AIO

Process Owner	Shellah Marie C. Miranda	BDOI

1.3 Definition of Terms

List down all terms, not limited to Acronyms, used in the document to help the readers understand the content.

Term	Category	Definition

1.4 References

Include here the Business Request (BRQ) and Business Case, or any other related documents,used in preparing this BRD.

DOCUMENT ID	TITLE	AUTHOR

2. Overview

The proposed enhancements aim to improve the efficiency, accuracy, and user experience of the claims management system. These enhancements focus on streamlining claims processing, enhancing data management, and providing valuable insights through reporting.

To have a facility in eBIX to support the requirements for Claims processing:

1. Claims Authorization
2. Policy Coverage Visibility
3. Date Management
4. Custom Claim Status
5. Claimant Name Override
6. Policy Number Visibility
7. Default Currency
8. Claim Status
9. Settlement Types
10. Adjuster/Appraiser Management
11. Settlement Status
12. Follow-up Date Override

2.1 Business Objectives

This is to be able to

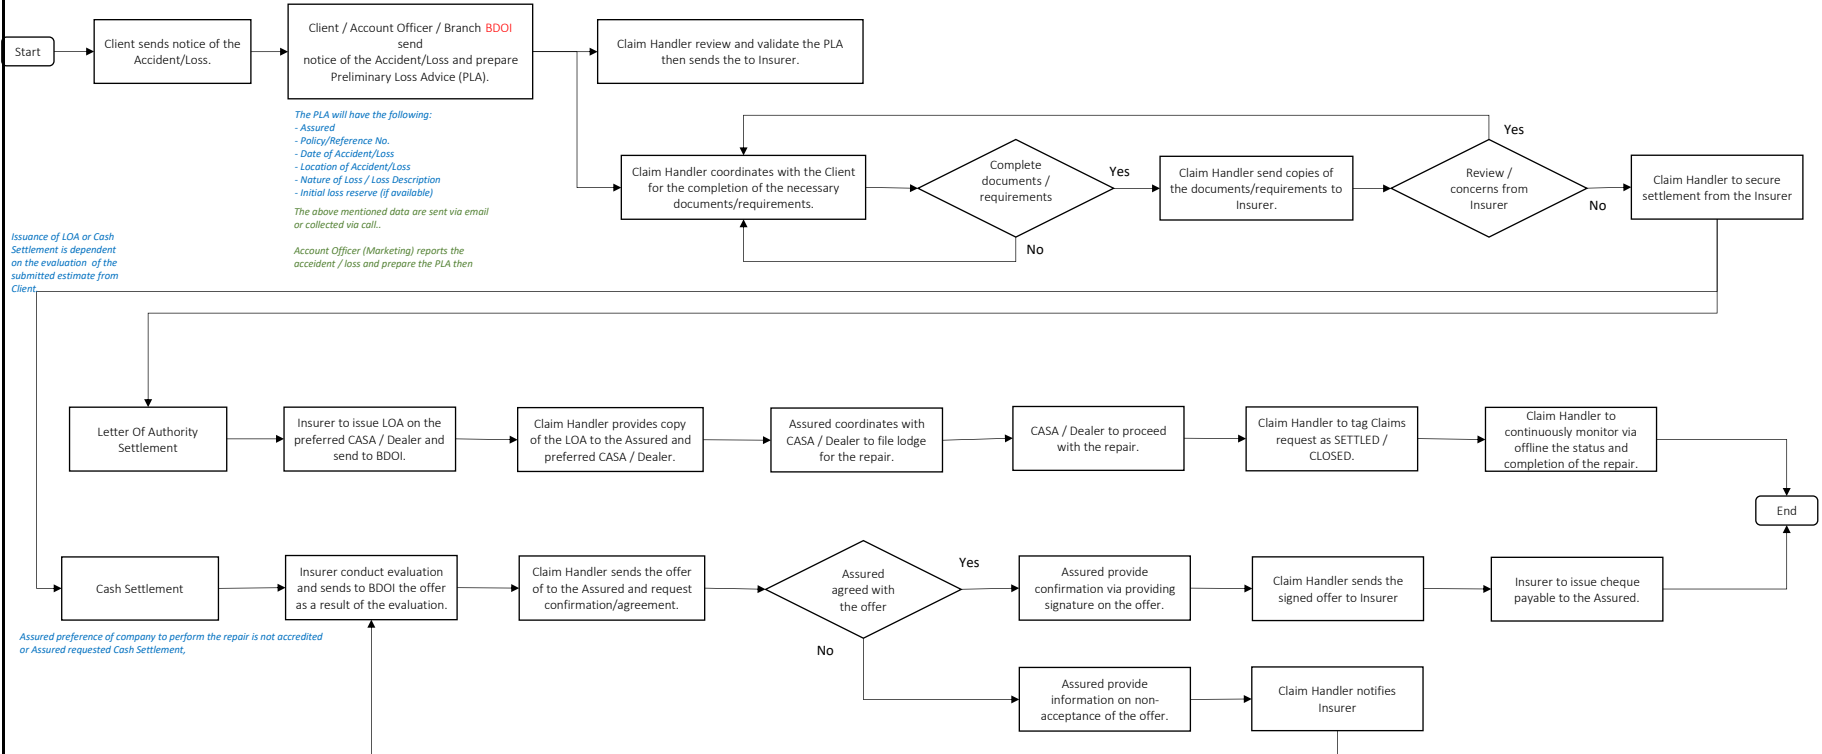

1. Improve claims processing efficiency via automating claims authorization code identification, simplify policy coverage checking, and enforce mandatory data input.
2. Enhance data management via maintaining accurate and up-to-date claims information, including status, settlement types, and adjuster/appraiser details.
3. Provide valuable Insights via generating reports on claims aging, settled claims, loss experience, outstanding claims, and loss ratio to inform business decisions.
4. Support business continuity via ensuring that the system accommodates business requirements, such as catastrophe coding and insurer reserve management.

2.2 Assumptions and Limitations

1. The existing claims module is functional and can be enhanced.
2. Users have basic computer skills and will receive training on new features.
3. Data migration and integration with existing systems will be seamless.
4. The system will be accessed through a secure and stable network.

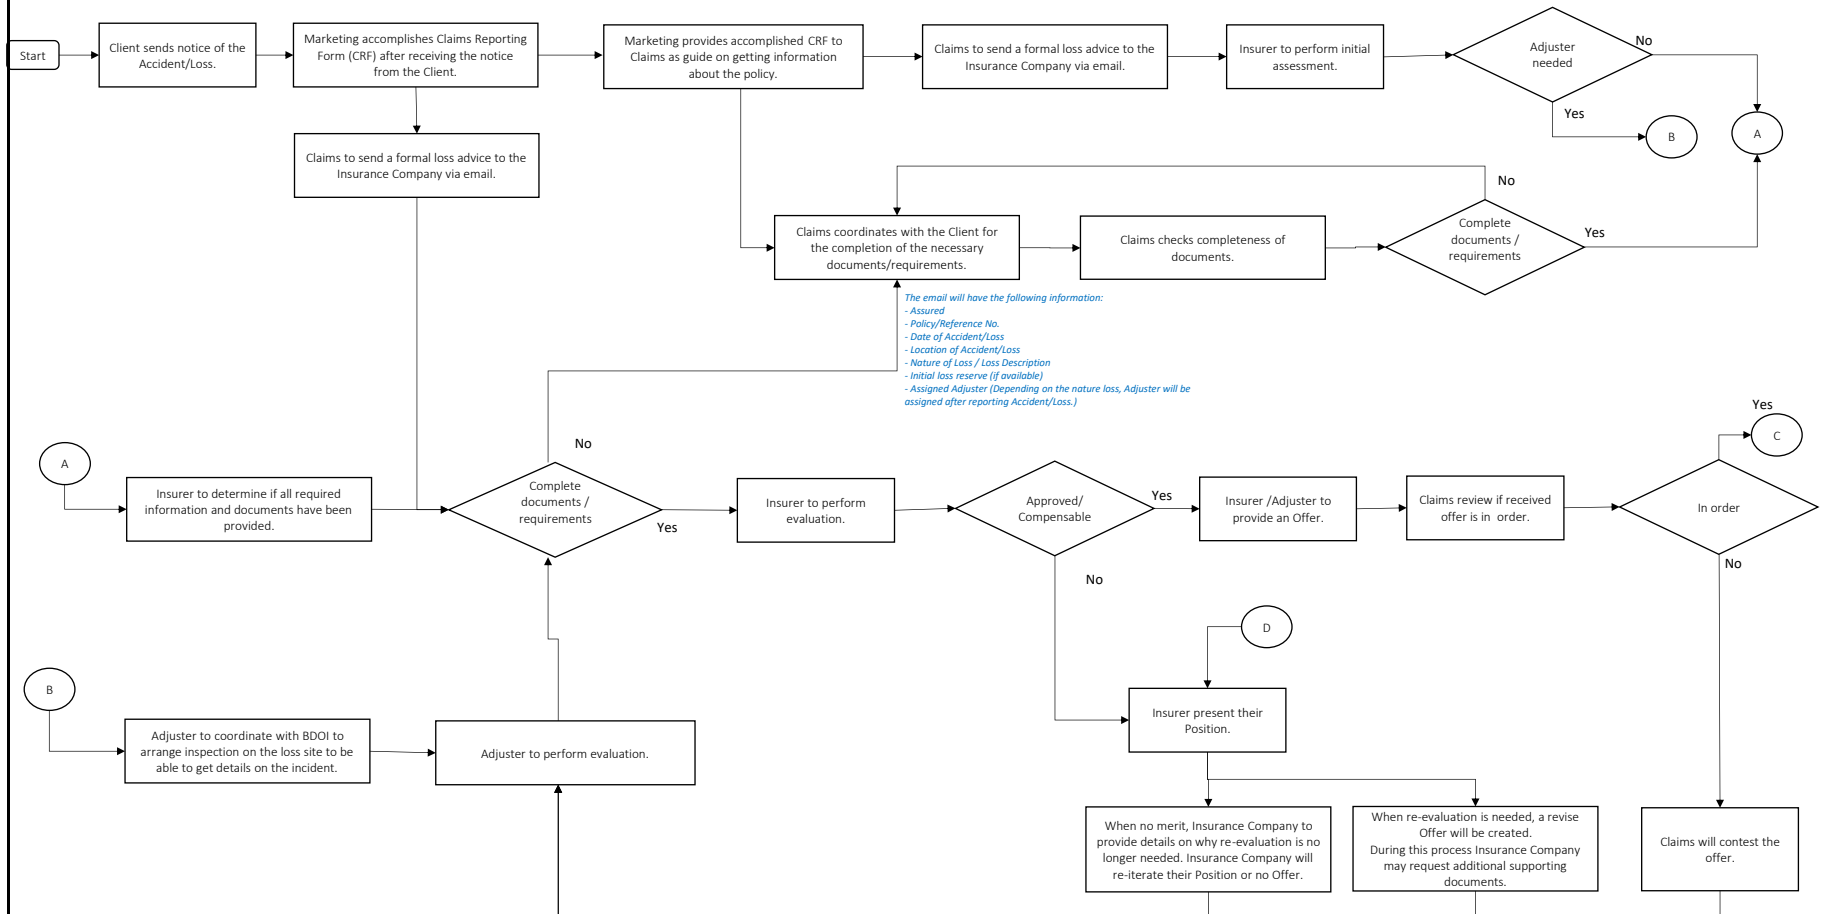

CURRENT PROCESS (Manual Filing)

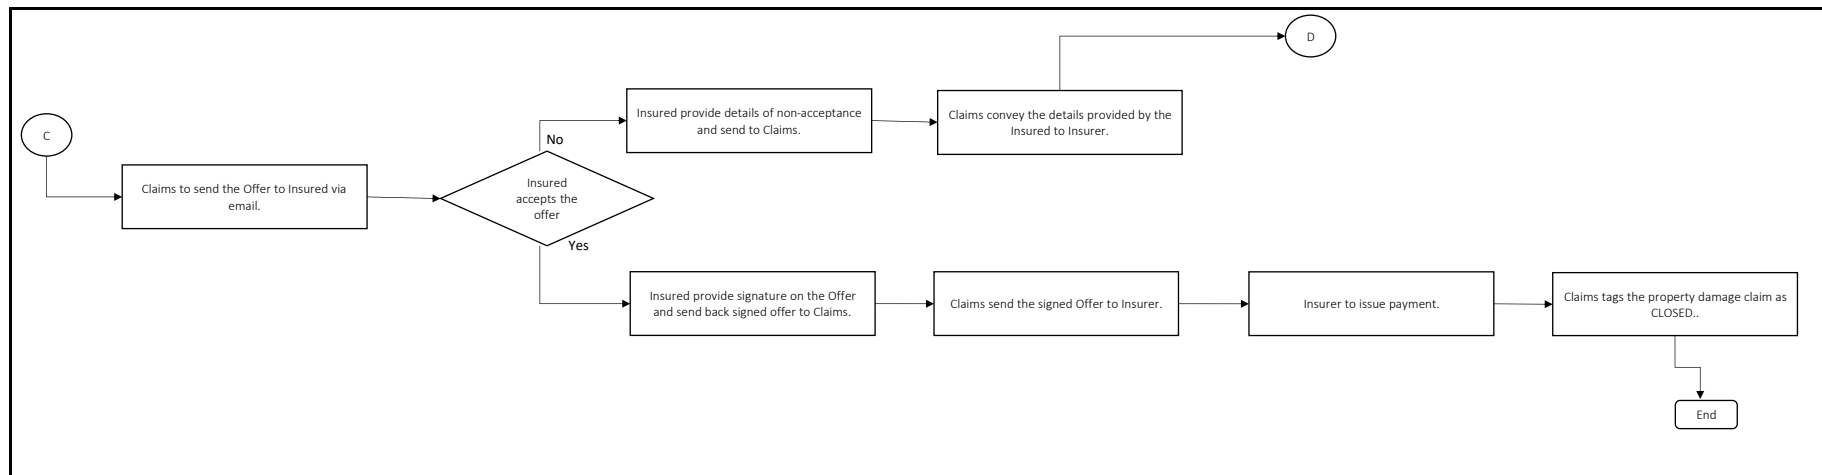

MOTOR – CLAIM PROCESS

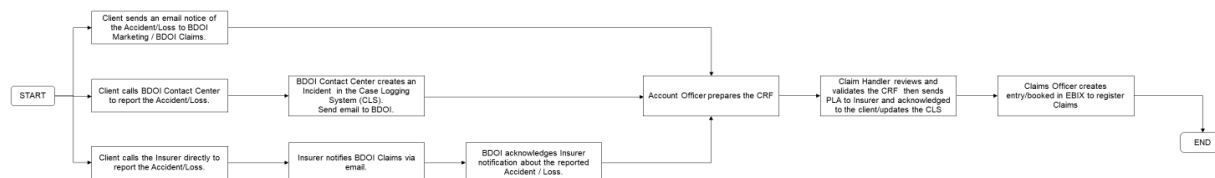

CURRENT PROCESS (Manual Filing)

NON-MOTOR – CLAIM PROCESS

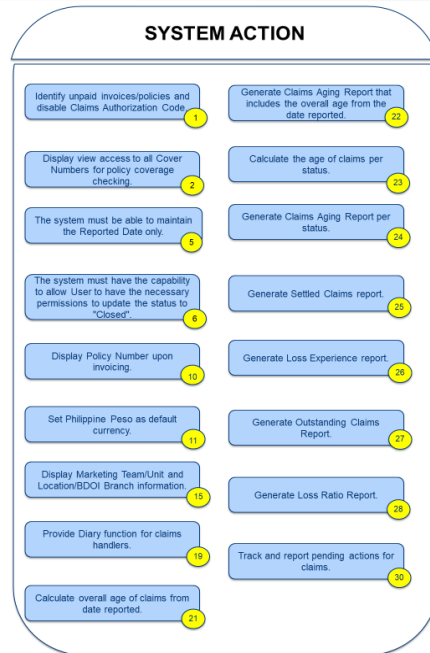

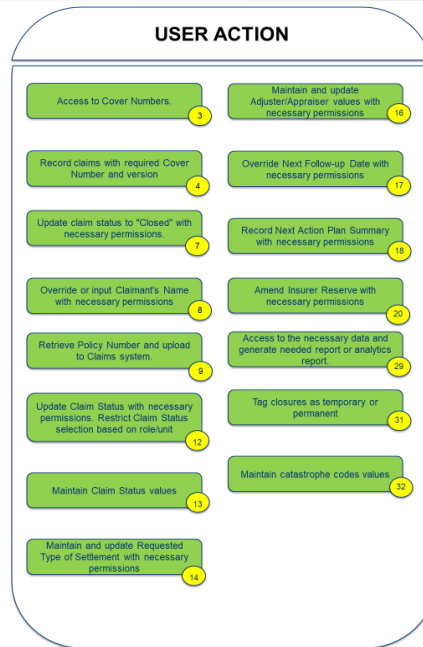

Reporting a Claim

TARGET PROCESS

CLAIMS PROCESS FLOW

TRIGGERED BY A MANUAL REQUEST

- Data Input
 - Record claims with required Cover Number and version.
 - Maintain Reported Date for claims.
 - Override or input Claimant's Name with necessary permissions.
 - Record Next Action Plan Summary with necessary permissions.
 - Tag closures as temporary or permanent.
- Data Update
 - Update Requested Type of Settlement with necessary permissions.
 - Update Adjuster/Appraiser values with necessary permissions.
 - Amend Insurer Reserve with necessary permissions.
- Data Override
 - Override Next Follow-up Date with necessary permission.
- Permission Set-up
 - Provide permission-based access to Cover Numbers.
 - Restrict Claim Status selection based on role/unit.
 - Provide access to necessary data for report generation.
- Value Maintenance
 - Maintain Claim Status values.
 - Maintain Requested Type of Settlement values.
 - Maintain Adjuster/Appraiser values.
 - Maintain Settlement Type Status values.
 - Maintain catastrophe codes values.

SYSTEM ACTION

USER ACTION

MANUAL

4. Stakeholders

Group	Unit/Department	User Role	Functions
BDOI		Unit Head	Provide permission-based access to Cover Numbers Maintain Claim Status values Restrict Claim Status selection based on role/unit Maintain Requested Type of Settlement values Maintain Adjuster/Appraiser values Maintain Settlement Type Status values Provide access to necessary data for report generation Maintain catastrophe codes values
		Team Head	Update claim status to "Closed" with necessary permissions Override or input Claimant's Name with necessary permissions Update Claim Status with necessary permissions Update Requested Type of Settlement with necessary permissions Update Adjuster/Appraiser values with necessary permissions Override Next Follow-up Date with necessary permissions Amend Insurer Reserve with necessary permissions
		Team Lead	Update claim status to "Closed" with necessary permissions Override or input Claimant's Name with necessary permissions Update Claim Status with necessary permissions Update Requested Type of Settlement with necessary permissions Update Adjuster/Appraiser values with necessary permissions Override Next Follow-up Date with necessary permissions Amend Insurer Reserve with necessary permissions
		Claims Officer / Claims Assistant	Provide permission-based access to Cover Numbers Record claims with required Cover Number and version Maintain Reported Date for claims Record Next Action Plan Summary with necessary permissions Tag closures as temporary or permanent

5. Business Requirements (FUNCTIONAL)

FR ID	Process Component	Activity	Capability/ Requirement	BR ID	Additional Remarks	Phase / Release	Mandatory?	High Risk?
FRID-001	Claims	Identifying Unpaid Invoices/Policies	The system must have a functionality to identify unpaid invoices/policies. Claims Authorization Code - should be disabled for unpaid invoices/policies.	RQID-001				
FRID-002	Claims	Database Management	The system must have the capability to allow User to have the necessary permissions to access the Cover Numbers.	RQID-002				
FRID-003	Claims	Managing Permissions	The system should provide view access to all Cover Numbers to check the policy coverages. Cover Number and versions are required upon recording a claim.	RQID-002				
FRID-004	Claims	Database Management	The system must be able to maintain the Reported Date only.	RQID-003				
FRID-005	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the status to "Closed".	RQID-004				
FRID-006	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to override or input the Claimant's Name.	RQID-005				
FRID-007	Claims	Policy Number Management	The system must be able to get the Policy Number from a source (EBIX) and upload it to the system (Claims).	RQID-006				
FRID-008	Claims	Policy Number Management	The system must be able to display the Policy Number upon invoicing as it is required by the insurer upon reporting a claim.	RQID-006				
FRID-009	Claims	Currency and Values Management	The system must have Philippine Peso set as the default value for Currency.	RQID-007				
FRID-010	Claims	Database Management	The system must be able to maintain values for Claim Status. • For Adjuster's Review and Evaluation • For Claimant's Acceptance of Offer • For Claimant's Submission of Documents • For Insurer's Issuance of Check • For Insurer's Returning of Release Papers • For Insurer's Review and Evaluation • Newly Filed Claim - with complete documents • Newly Filed Claim - without or incomplete documents • Temporary Closed Claim - Non-submission of Documents • Temporary Closed Claim - with Offer • With Adjuster - For Issuance of Settlement Offer • With Assured - For Schedule of Meeting • With BDOI - For Premium Remittance • With BDOI - For Transmittal of Settlement Check • With BDOI - Under Review/Discussion • With Claimant - For Pull-out of Salvaged Items • With Claimant - For Submission of CNR • With Insurer - For Issuance of LOA	RQID-008				
FRID-011	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the Claim Status.	RQID-008				
FRID-012	Claims	Status Management	The system must have role/unit-based permissions for selecting Claim Status.	RQID-009				
FRID-013	Claims	Status Management	The system must allow selection of Claim Status only for specific roles/units.	RQID-009				

FRID-014	Claims	Database Management	The system must be able to maintain values for Requested Type of Settlement. • Closed – Cancelled • Closed – Denied • Closed - within Deductible • Closed - without Payment • Settled • Settled - Directly Filed • Settled - LOA Issued • Settled - LOA Issued - For Schedule of Repair • Settled - LOA Issued - Vehicle Under Repair • Settled - Signed Release Papers Returned	RQID-010 RQID-013				
FRID-015	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the Requested Type of Settlement.	RQID-010				
FRID-016	Claims	Marketing and Branch Information	The system must have capability to allow User view Marketing Team/Unit (of the policy) and Location/BDOJ Branch information.	RQID-011				
FRID-017	Claims	Database Management	The system must be able to maintain values for Adjuster/Appraiser. List of Adjusters 1. Gemini Adjustment Company 2. Chartered Adjusters, Inc. 3. BA International Adjusters & Surveyors Company, Inc. 4. Total Claims Specialist, Inc. 5. Unified Adjusters and Surveyors (FAR East), Inc. 6. Top Brass Insurance Adjusters & Surveyors Co., Inc. 7. Adjustment Standard Corporation (ASCOR) 8. CARES Adjusters & Surveyors, Inc. 9. Plaridel Adjusters and Appraisers, Inc. 10. Crawford & Company Philippines, Inc. 11. Manila Adjusters & Surveyors Company (MASCO) 12. Tan-Gatue Adjustment Company, Inc. 13. Technical Inspection Group Adjustment & Surveyors Corp. 14. Esteban Adjusters and Valuers, Inc. 15. Interclaim Adjustment Co., Inc. 16. Pacific International Loss Adjusters Co., Inc. 17. Senon Insurance Adjusters & Appraisers 18. Audemus Adjustment Corporation 19. PALM Property Adjusters 20. McLarens Philippines 21. Universal Adjuster Appraisers Co., Inc. 22. Eagle Prosperity Adjustment and Surveyor Corp. 23. DFM Adjustment Co., Inc. 24. Optimum Claims Solutions Insurance Adjustment, Inc. 25. TreborAsia Insurance Adjustment Services	RQID-012				
FRID-018	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to update the Adjuster/Appraiser values.	RQID-012				
FRID-019	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to override the Next Follow-up Date.	RQID-014				
FRID-020	Claims	Account Activity Management	The system must have a field for the Next Action Plan Summary.	RQID-015				
FRID-021	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to encode the Next Action Plan Summary.	RQID-015				
FRID-022	Claims	Account Activity Management	The system must have a Diary function for claims handlers.	RQID-016				
FRID-023	Claims	Account Activity Management	The system must have a field for amend Insurer Reserve.	RQID-017				
FRID-024	Claims	Managing Permissions	The system must have the capability to allow User to have the necessary permissions to amend the Insurer Reserve.	RQID-017				
FRID-025	Claims	Values Management	The system must have a mechanism to calculate the overall age of claims from the date reported.	RQID-018				
FRID-026	Claims	Report Generation	The system must be able to generate Claims Aging Report that includes the overall age from the date reported.	RQID-018				

FRID-027		Values Management	The system must have a mechanism to calculate the age of claims per status.	RQID-019				
FRID-028	Claims	Report Generation	The system must be able to generate Claims Aging Report aging per status.	RQID-019				
FRID-029		Report Generation	The system must be able to generate Settled Claims report availability.	RQID-020				
FRID-030		Report Generation	The system must be able to generate a Loss Experience report.	RQID-021				
FRID-031	Claims	Report Generation	The system must be able to generate a Outstanding Claims Report.	RQID-022				
FRID-032	Claims	Report Generation	The system must be able to generate a Loss Ratio Report.	RQID-022				
FRID-033	Claims	Report Generation	The system must have the capability to allow User to have access to the necessary data and generate needed report or analytics report.	RQID-022				
FRID-034	Claims	Report Generation	The system must be able to track and report pending actions for claims.	RQID-023				
FRID-035	Claims	Account Activity Management	The system must be able to tag closures as temporary or permanent.	RQID-024				
FRID-036	Claims	Database Management	The system must be able to maintain values for catastrophe codes. • Typhoon • Earthquake • Flood • Volcanic Eruption • Landslide • Fire • Others (i.e. Pandemic, El Niño, Terrorism)					

6. Business Requirements (NON-FUNCTIONAL)

1) List all the non-functional requirements needed by the project including but not limited to security, system performance and resiliency.

2) The following Non-Functional Requirements are samples. Please replace them and add to them as applicable to your project.

NFR ID	Requirement	Additional Remarks
1	User Authentication Requirements	EBIX is already an existing system and NFR will follow the existing requirement setup.
1.01	As a user, I should be able to open the application using my windows credentials in the application login page so that I could use only one credentials for all the application I am using.	
1.02	As a user, I should be able to see my password masked unless I select to unmask it as it is being entered to the system to prevent exposure of the password	
1.03	As a user, I should be able to see my log on error messages to be user friendly and not code based error messages so that I would understand the error prompts.	
1.04	The system should be able to log all valid and invalid attempts to access the application. Only the System Administrator should be able to see the logs for user access attempts.	
2	Password Requirements	System should use SSO and follow existing BDO compliance password requirements
2.01	Password is validated without exposing the clear text value of the stored password (e.g. hash / masking)	
2.02	The system should lock out or disable access of user after three (3) invalid password attempts	
2.03	The system should support mandatory password change at least once every 90 days as per LDAP compliance.	

2.04	Minimum password length is eight characters (8). For system accounts with administrator privileges, minimum password length is twelve (12) characters.	
2.05	Composition of complex passwords is supported by requiring creation of passwords consisting of: - Combination of alphabetic, numeric, and special characters - Combination of upper case and lower case alphabetic characters	
2.06	Re-use or recycling of previous/last eight (8) passwords is prevented	
2.07	The application supports a minimum password age of one (1) day to prevent users from cycling through previous passwords until the next day.	
2.08	Password reset facilities (e.g. forgot password links) should verify the identity of the user initiating the request through out-of-band validation	
2.09	Input data in the UserID and Password fields should be evaluated for the following factors: a) Length of data is ten (10) characters b) Only accept permitted characters	
2.10	The system should be capable of adapting to changes in specific values of password parameters (e.g. 90 for expiration, 3 for lockout, 8 for password length, etc) in response to changes in the level of security threats.	
3	Access Control Requirements	
3.01	The system should be able to provide maintenance function for user administration, which supports user creation, update, deletion and account locking/unlocking.	
3.02	The system should support role based access control.	
3.03	The system should be able to support creation of custom roles o support granular level of access	
3.04	The system should protect against URL parameter manipulation that can bypass authorization by preventing exposure of direct object references	
4	Audit Logging Requirements	
4.01	The system audit logs record successful and rejected system access attempts (i.e. login, logout), privileged system usage, as well as account changes such as creation, deletion, and assignment of user roles.	
4.02	The system audit logs record successful admin maintenance actions (e.g. userID creation/deletion, elevated access of userID).	

4.03	The system audit logs record the following admin and user activities: Application Maintenance and Backend Activities - Application startup and shutdown. - Application failures. - Application configuration changes. - Accessing of audit logs - Pausing, clearing, or deleting audit logs, as applicable Application Usage, such as, - Access and updates of customer records, whether customer-initiated, or done through back office facilities. - Financial transactions initiated within the application, as applicable. - Device enrollment or unenrollment, as applicable.	At the minimum, audit logs should log the following information: - Event timestamp. - User account/s involved in the event. - Source (workstation, device, or IP address) of the event. For systems situated behind a load balancer or anti-DDoS solutions, the original source IP should be logged. - Resources accessed, if any (e.g. URL, file path, etc.).
4.04	Application software logs such as Tomcat or IIS does not log sensitive information such as credentials, and session tokens, and other data defined under local privacy laws or relevant security policies.	
4.05	Audit logs should be exportable, or made available for sending to remote log monitoring systems as needed.	
5	Input Data Checking and Validation Requirements	
5.01	Input data is validated and sanitized (e.g. within length boundaries, contains permitted characters, correct syntax, etc) to protect against code injection attacks which include, but not limited to - sql injection, cross-site scripting, buffer, heap, or integer overflow, and denial-of service.	
6	Database Authentication Requirements	
6.01	The database management system has standard security features that include, but not limited to, authentication, access control and audit logging.	
6.02	Access to the database is only allowed after proper authentication.	
6.03	Credentials are not hard-coded within the application binaries or programs, but are set in a server configuration file or repository that can be made accessible only to authorized users, or encrypted when stored in client machines.	
6.04	Least privilege access level or only the needed privilege is granted when accessing the database.	
6.05	Low level database functions such as xp_cmdshell and extproc, that enable access to execute commands in the operating system, are not used by the system	
7	Application Encryption Requirements	
7.01	The system should make use of available security protocols (e.g. HTTPS, SFTP/FTPS, SSH etc.) to protect sensitive data during transmission over networks.	
8	Application Configuration and Library Dependency Requirements	
8.01	The system should ensure proper error handling preventing disclosure of sensitive information such as stack traces, failed SQL statements, underlying web server platform and othe debugging information.	
8.02	Source code control system is in use, with procedures to ensure that check-ins are accompanied by issues or change tickets. The source code control system should have access control and identifiable users to allow traceability of any changes. Proper versioning for any system changes should be implemented.	

8.03	The system should NOT use unsupported, insecure, or deprecated client-side technologies, container images, and/or libraries.	
8.04	Third party components come from pre-defined, trusted and continually maintained repositories.	
8.05	Inventory catalog is maintained of all third party libraries in use. Version and support information is also maintained to track when a library becomes outdated	
8.06	Least privilege access level or only the needed privilege is granted when accessing the database.	
9	User Interface and Experience Requirements	
9.01	The system user interface must follow existing BDO Insurance UI to have a uniform experience for all BDOI applications.	
9.02	For internal systems, concurrent open sessions should be allowed and will follow session management requirements.	
9.03	User should be able to copy/paste from their local computer to the Application in all fields that are applicable	
9.04	Proper error handling is implemented preventing disclosure of sensitive information.	
10	Session Management Requirements	
10.01	The system should support an idle or inactivity timeout for session. Session timeout is set to 15 minutes for active session opened.	A screen should be available in the System Administration page to set the session time outs. By default, timeouts are set by BDO standard for non customer facing applications
10.02	Session IDs are random and unpredictable to avoid attacks.	
10.03	Session ID changes/renews each time a user authenticates to the application, and is invalidated on the server side upon logout.	
10.04	The system uses session cookies, the 'HttpOnly' and 'SecureFlag' attributes are enabled using set-cookie directive	
10.05	A user session is established only after valid credentials are provided. Insecure implementation of programs (e.g. Java Servlets), which potentially allow access to the application without a successful login, are disallowed.	
10.06	Only session IDs generated by the application framework are recognized as active by the application	
11	Integration Requirements - Webservice /APIs	
11.01	Web service/API authenticates the calling application/system through OAuth2.0 or similar methods. Internal APIs handling financial transactions must implement OAuth at the minimum.	

11.02	Public-facing web services/API implements mTLS or an equivalent mutual authentication method	
11.03	Web service/API authorizes whether a calling application has access to a requested method.	
11.04	Sensitive information required for further processing by other application logic (e.g. client phone number to send OTPs) should be handled exclusively by back-end components, and must not pass through or stored in the client's browser or the calling application.	
11.05	Information contained in the response should be limited only to what is necessary for the web service's/API's purpose.	
11.06	Web service/API audit logs are able to capture the following events: - Failed access attempts - Denied access	
12	Batch Process Requirements	
12.01	Access to execute batch process is restricted to authorized users.	
12.02	Target locations for extracted data have strict access controls.	
12.03	Batch process authenticates to the database server before it is allowed access to data.	
12.04	Batch process connects to a database management system with standard security features, but not limited to, authentication, access control and audit logging.	
12.05	Credentials used by the batch process are not hard-coded within the application binaries or programs, but are set in a configuration file that can be made accessible only to authorized users.	
12.06	Least privilege access needed by the application is assigned to the credential used to access the database.	
12.07	Batch process makes use of available strong cryptography and/or security protocols such as TLS, SSH and IPSEC to safeguard sensitive data during transmission over private and public network.	
12.08	Audit logs record elements that can pinpoint origin of the batch process, when it was executed and who triggered it.	
13	Scalability Requirements	
13.01	The system should perform in normal response time even if maximum load is encountered	- No downtime during application scaling should be encountered for the system - For Database Scaling : maximum of 120 minutes downtime and would only be done manually
14	Regulatory Requirements	None

15	Should fulfill Capacity and Performance Requirements (see Tables below) (refers to the requirements that impact the performance relative the amount of resources and maximum limits of the system)	
16	Should fulfill Data Retention and Archiving Requirements (see Tables below)	
17	Should fulfill Availability Requirements (refers to requirements that impact a system's accessibility)	
17.01	Defined operating hours (Defined operating hours refers to the day and time during which a business or organization is open for users to do business. On the context of this project, please specify the day and time the users are expected to use this module (e.g. Monday - Friday, 8:00AM to 5:00PM))	Mondays - Fridays 6:00 AM - 8:00 PM
17.02	Defined locations (Defined locations refers to the site where business transactions can be performed. On the context of this project, please specify to which locations can a user access this module (e.g. Main office, satellite offices, branch, at home or anywhere via remote access, anywhere via Internet, etc.)	Head Office - Makati and Ortigas BDOl Branches - Angeles, Cebu, CDO, Davao, Gensan
17.03	Defined maintenance window (Defined maintenance windows refers to the period of date and time designated in advance by the technical staff, during which preventive maintenance that could cause disruption of service may be performed.)	Follow standard window time
18	Should fulfill Reliability and Recoverability Requirements (refers to the requirements that impact a system's ability to deliver critical business services and to recover from sudden errors or downtimes)	
18.01	RTO (recovery time objective) Refers to the maximum tolerable length of time that a computer, system, network, or application can be down or should be operational after a system failure or disaster occurs (e.g. within 2 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours

18.02	<i>RPO (recovery point objective)</i> Refers to the maximum acceptable amount of data loss measured in time. It is the age of the files or data in backup storage required to resume to normal operations of a computer system or network failure occurs. In other words, this refers to a point in the past from which data should be recovered to make a system operational after a system failure (e.g., data within the last 4 hours). Note that the Business Unit should have aligned with ORMU before providing this information. (Maybe in seconds, minutes, hours, or days)	4 hours
18.03	Disaster Recovery Server Required (Y/N)	YES
18.04	Recovery Processes documentation	YES

15a. Performance and Capacity Requirements

Consider if Performance & Capacity Requirements are applicable to your project. Values on the table are sample requirements you can use.

NFR ID	Business Process / Transaction Type	User Channel / Touchpoint	Group	User Count		Current Transaction Volume	Projected Growth	Expected Response / Processing Time	Acceptable Error Rate	Interfaced Systems	Average File Size per System	Maximum File Size per System	Frequency
				Max	Concurrent								
15.01	User Login /Logout	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	10 tps	10%	5 seconds	2%	LDAP			Daily
			BDOI Branches - Claims	9	5	10 tps	10%	5 seconds	2%	LDAP			Daily
			Application Management Support	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
			BDOI - IT	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
			DCO	10	2	10 tpd	10%	5 seconds	2%	LDAP			Occasionally
15.02	All on Screen Leading		All user groups	67	26	10 tps	10%	5 seconds	2%				Daily
15.03	Dashboard	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	10 tps	10%	5 seconds	2%				Daily
			BDOI Branches - Claims	9	5	10 tps	10%	5 seconds	2%				Daily
			Application Management Support	10	2	10 tps	10%	5 seconds	2%				Occasionally
			BDOI - IT	10	2	10 tps	10%	5 seconds	2%				Occasionally
15.04	Claims Booking	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	55 tpd	10%	5 seconds	2%				Daily
			BDOI Branches - Claims	9	5	55 tpd	10%	5 seconds	2%				Daily
15.05	Premium Policy Validation	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	55 tpd	10%	5 seconds	2%				Daily
			BDOI Branches - Claims	9	5	55 tpd	10%	5 seconds	2%				Daily
15.06	Claims Status	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	1096 tpd	10%	1 minute	2%				Daily
			BDOI Branches - Claims	9	5	1096 tpd	10%	1 minute	2%				Daily
15.07	Settlement Status	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	1096 tpd	10%	1 minute	2%				Daily
			BDOI Branches - Claims	9	5	1096 tpd	10%	1 minute	2%				Daily
			Head Office - Marketing	10	5	50 tpd	10%	5 seconds	2%				Weekly
15.08	Activity Log	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	1206 tpd	10%	5 minutes	2%				Daily
			BDOI Branches - Claims	9	5	1206 tpd	10%	5 minutes	2%				Daily
15.09	Report Generation - Claims Aging Report	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	5 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Weekly
			BDOI Branches - Claims	9	5	5 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Weekly

15.10	Report Generation - Settled Claims Report	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	1 tpm	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Monthly
			BDOI Branches - Claims	9	5	1 tpm	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Monthly
15.11	Report Generation - Loss Experience Report	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	3 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Daily
			BDOI Branches - Claims	9	5	3 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Daily
15.12	Report Generation - Outstanding Claims Report	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	5 tpw	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Weekly
			BDOI Branches - Claims	9	5	5 tpw	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Weekly
15.13	Report Generation - Loss Ratio Report	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	3 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Daily
			BDOI Branches - Claims	9	5	3 tpd	10%	5 minutes	2%	Shared Drive	5 MB	10 MB	Daily
15.14	Email Notification - to either Client, Account Officer, Insurer	Web (Internal / Within BDO Network)	Head Office - Claims	28	15	50 tpw	10%	5 minutes	2%				Daily
			BDOI Branches - Claims	9	5	50 tpw	10%	5 minutes	2%				Daily
15.15	System Administration (User Access Management)	Web (Internal / Within BDO Network)	Application Management Support	10	2	5 tpd	10%	5 seconds	2%				Occasionally
			BDOI - IT	10	2	5 tpd	10%	5 seconds	2%				Occasionally
			DCO	10	2	5 tpd	10%	5 seconds	2%				Occasionally
15.16	System Administration (Business Parameter)	Web (Internal / Within BDO Network)	BDOI - IT	10	2	5 tpd	10%	5 seconds	2%				Occasionally
15.17	System Administration (Technical Parameter)	Web (Internal / Within BDO Network)	Application Management Support	10	2	5 tpd	10%	5 seconds	2%				Occasionally
			BDOI - IT	10	2	5 tpd	10%	5 seconds	2%				Occasionally

23b. Data Retention & Archiving

Consider if Data Retention & Archiving Requirements are applicable to your project. Values on the table are sample r Reference: [PPC No. DOCMNGT-GENPOL-002.pdf](#)

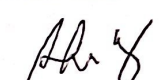

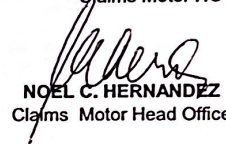

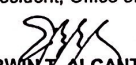

NFR ID	Data	Retention Period (Data-In-Use / Online)	Archival Period (Data-at-Rest / Offline)	Disposal / Purging Period	Backup Frequency	Backup Retention Period
25.18	Application Logs	10 Years	15 years	after 15 years	Every 4 hours	5 Years
25.19	Database Logs	10 Years	15 years	after 15 years	Every 4 hours	5 Years
25.2	Audit Logs (System Level & Secure logs)	10 Years	16 years	after 15 years	Every 4 hours	5 Years
25.21	Infrastructure Event logs	10 Years	15 years	after 15 years	Every 4 hours	5 Years
25.22	Historical data within database	10 Years	15 years	after 15 years	Every 4 hours	5 Years
25.23	Configuration / VMs Snapshots	10 Years	15 years	after 15 years	Every Week	5 Years
25.24	Documents (digital copy)	10 Years	15 years	after 15 years	Every Month	5 Years
25.25	Documents (hard copy)	10 Years	10 years	after 10 years	N/A	N/A

List of Reports	Description	Fields to be included in the report	Report Format
Ad-Hoc			
List of all Outstanding Claims	As needed	Claim Number Name of Claimant Assured's Name Nature/Type of Loss/Accident Date of Loss Date Reported Claim Amount Deductible Claim Status Insurance Company Claim Type Follow Ups/Remarks Age this Stage Age Overall Next Follow Up Claim Handler Marketing Team Account Officer	Excel
List of all Settled Claims	As needed	Claim Number Name of Claimant Assured's Name Nature/Type of Loss/Accident Date of Loss Date Reported Claim Amount Deductible Date Settled Settlement Amount Age Overall Claim Status Claim Handler Marketing Team Account Officer	Excel

List of Outstanding Claims 90 Days Past Due	As needed	Claim Number Name of Claimant Assured's Name Nature/Type of Loss/Accident Date of Loss Date Reported Claim Amount Deductible Claim Status Insurance Company Claim Type Follow Ups/Remarks Age this Stage Age Overall Next Follow Up Claim Handler Marketing Team Account Officer	Excel
Claims Aging Report aging per status.	As needed	Claim Number Name of Claimant Assured's Name Nature/Type of Loss/Accident Date of Loss Date Reported Claim Amount Deductible Claim Status Insurance Company Claim Type Follow Ups/Remarks Age this Stage Age Overall Next Follow Up Claim Handler Marketing Team Account Officer	Excel
Loss Experience report.	As needed	Insured Claimant Policy No. Date of Loss Nature of Loss Type of Loss Deductible Amount of Loss (paid, O/S, Total) Insurer Name Status	Excel

Loss Ratio Report.	As needed	Insured Claimant Policy No. Date of Loss Nature of Loss Type of Lopss Deductible Amount of Loss (paid, O/S, Total) Insurer Name Status Premiums	Excel
